sciences besides his own. A collected edition of his sciences besides his own. A collected edition of his works is in process of publication at the University Press. Among separate publications are "An Elementary Treatise on Elliptic Functions" (1876); "Addition to Memoirs on the Transformation of Elliptic Functions" (1879); "Tenth Memoir on Quantics" (1879); and "Single and Double Theta Functions" (1881).

Chesney, Sir George Tomkyns, an English general, born in 1830; dies in London, March 31 1893, 114

born in 1830; died in London, March 31, 1895. He was educated at Woolwich, and joined the Bengal Engineers in 1848. He was made licutenant general in 1885, and from 1870 to 1880 was President of the Royal Indian Engineering College. He was the author Royal Indian Engineering College. He was the author of "Indian Polity: A View of the System of Administration in India," (1868); "The Battle of Dorking: Reminiscences of a Volunteer" (1871); and the novels "A True Reformer" (1873); "The New Ordeal" (1871); "The Private Secretary" (1881); and "The Lesters." "The Battle of Dorking" was published anonymously first in "Blackwood's Magazine," which is sent into a fifth edition and offerword in present in the second of the second it sent into a fifth edition, and afterward in a pamphlet which is said to have sold to the number of 100,000 copies.

Christian, Ewan, an English architect, born Sept. 20. Unisuan, Lwan, an English architect, oorn Sept. 20, 1814; died in Hampstead, London, Feb. 21, 1895. He was educated at Christ's Hospital, and in 1830 was articled to the architect, Habershon, for whose work on "Half-timbered Houses" he made sketches. In 1837 he traveled on the Continent, and on his return he established himself in business. His first building was the parish church of Hildenborough, near Tunbridge, and his first important church restoration, a department in which he became eminent, was St. Mary's at Scarborough. He restored the cathedrals of Carlisle and Southwell as well as several of the London City churches. His most important work, the National Portrait Gallery, adjoining the National Gallery in London, he did not live to see completed. From 1850 he held the post of consulting architect to the Ecclesiastical Commissioners and several similar appointments. He was President of the Institute of British Architects from 1884 to 1886, and received the Institute gold medal in 1887.

Churchill, Randolph Henry Spencer, an English states-man, born in Blenheim Palace, Feb. 13, 1849; died in London, Jan. 24, 1895. He was the third son of the seventh Duke of Marlborough and of a daughter of

the Marquis of Londonderry, who was a grand-niece of Lord Castlereagh. Lord grand-meec Castlereagh, Lord Churchill was educated at Eton School and at Merton College, Oxford. At Eton, where he was a contemporary of Arthur Balfour and Lord Rosebery, he manifested his energy and ingenuity in frolicsome pranks, and at the university he set out on a gay and reckless career, but applied himself to study in order to get his degree in 1871, and even took honors in modern his-

tory and jurisprudence. He traveled through Europe, spending much time in Austria. He wavered between a military or a diplomatic career, and seeing no opportunity in either for the exercise of his rest less energies, embraced the chance that was presented by the dissolution of Parliament early in 1874 to go into politics. He was elected to represent the petty constituency of Woodstock. As it was a family borough, he was not called upon to unfold his political control of the constituency of cal principles, nor did he profess any except antago nism to Gladstone. Though his father held a high

in the Conservative Government, Lord Hannot trained nor mittded to carn the rewards e life by docile submission to party discipline. soo much of an English aristocrat, however, rainst forms and precedents, and in this sent he kept quiet, studying attentively the ad the precedure and treasuring for future use servations of political arts and ruses and the and wards or parliamentary debate. He made effort to gain the attention of the liouse, became the member for Woodstock, he a spirited plea for the preservation of small ha. His constituency elected him with a di-had majority in 1878. Though his father was Lioutenant of Iroland, Lord Randolph Churchill, the prestige of the Conservative party waning, of content to sit behind ministers whose lack content to sit behind ministers whose lack by and force made him impatient. Going he frost bench below the gangway, he made or conlaught on the President of the Local ont Board, Sciater-Booth, denouncing his wernment bill as a most radical, democratic He had not yet evolved the principles of Demogracy, but he was never devoted to politicinelles and consistency any more than his yes, Diarnell. When the Liberals came in with ous majority in 1880, when the tried leaders conservative party, the "old gang," who and the democratic masses and were unable to lves to the methods and measures that emselves to the methods and successes, were seesary to captivate the new electorate, were by their unexpected defeat and spellbound sone's overpowering ascendency, the Fourth rese to show that there was vitality left in cryative party. The small group that soon seknowledge Lord Randolph Churchill as nder was composed of young men who all had gilliant career of Lord Beaconsfield before their and who had caught the spirit of the assiminius and philosophic imagination that en-a to infuse the new life of the age into the s party, to lift it above selfish class interests regant prejudice, and draw it almost unwit-and unwillingly into the historic movement. of members of the group that was nicknamed urth party "were Lord Randolph Churchill, J. Balfour, Sir Henry Drummond Wolff, and t. When Sir Stafford Northcote, the leado Opposition, refrained from challenging Mr. ae on the side issue of the seating of Mr. Brad-ir. Gorst, Sir Henry Wolff, and Lord Randolph hill saw an opportunity to place both leaders awkward predicament by a theatrical stroke reald give a sensational prominence to them-Lord Randolph Churchill took the lead of After appealing to Mr. Gladstone to ex-tatheist and disloyal person, he carried a set Mr. Bradlaugh should not be allowed to L and in 1881 a similar motion. Casting r subjects for a serious programme, he allied at first with the Protectionists and prod a scheme for taxing the products of foreign labor and applying the £20,000,000 thus to the relief of the distressed agriculturists. r he denounced the impending extenof the franchise as an attempt of impostors to their failure to fulfill their promises. In of Commons he derided Sir Stafford Northad attacked Mr. Gladstone, often in such reckthe as to damage only his own reputation, but, whole, with telling effect upon the country.

Stump, too, before audiences of workingmen, oved up the temporizing weakness of the shift-policy of the Liberals and the hollowness of the The closure, the Parnellite alliance, the occuof Egypt, the abandonment of the Soudan, a seridee of Gen. Gordon, the timorous policy Busis, the alienation of the colonies, the agral distress, the agitation against the House of the shortcomings of the budget-every act

ated omission of the towermeet was a of a new industrient against " at an make-believes, whose every act or a famill proposed to scale down the delt and you a fire. Pasha and the National party in power would the control of united hureje. After resisting the cates aion of the franchise and of local self-government, he veered round to the position of the Tory Drammung and was willing, like Disraeli, to coulded the Literain and after denouncing so iniquitious the equition of the Liberale and the l'arrellites he secretly magni-tiated with the Irish leaders, but could not asslate the chiefs of his party to surrender their principles. When contesting firmingham against John Height he assailed the reputation of that old reforming with the same savage vehemence that he was would to expend on Gladstone, and in unveiling the hypervision of Liberalism he further unfoliced the ideas of the Tory Democracy. The followers of his Medical Northcote fought hard to cost him from the chairmanship of the Central Union Conservative Asserta-tions. To show his power, he resigned, and his ens-mies thenceforth had to how to his claims. When the tiladetone ministry was upset in June, 1981, the credit of the victory was given to the Fourth party, but its leader was not to have a very premianal place in the counsels of the men he had telistical, at least not before he had proved his Stness for office. He was taken into the Cabonet of Lord halishury as Secretary of State for India, and seem showed capability, mastering the business of the office and ably advocating in the llows the views of the purably advocating in the House the views or ma per-manent officials. The contest of Upper Burnash sig-nalized his short tenure of the office. In the following year, to become Chancellor of the Eachequer and leader of the House of Commons in the purely Comservative Cabinet that conducted the general election of July, 1886, Lord Randolph Churchill and For John Gorst endeavored to consummate an alliance between their party and the l'arneilites. They had allowed the erimes act to lapse, and they premised an investigation of Lord Spencer's administration. Lord Mandelph was beaten by Mr. Bright in the central division of Birmingham, but he was returned for bouth Passing-ton as well as for Woodstock. Changing his attends toward the Irish, he denounced home rule as a min ture of imbecility and political hysterics, and charged the Gladstonians with trying to shatter the Constitution simply to gratify the ambition of " an old mun in a hurry." The Unionist policy, as he explained it, was so advanced that the Hadicale accused him of stealing their programme. He alone were not not cepted, however, by the clider chiefs of his purity. As Chancellor of the Exchequer he opposed a polary by imperial expansion and military adventure, and thus came into direct conflict with the majority of the Cabinet. In December he surpresed coury heady by resigning his office, on the ground that he small not assent to the demands of the War Department and the Admiralty upon the treasury. His business, that never saw the light, is believed to have been a work of genius. Few thought that the t'aboust could ou tain his loss, but the Liberal I microste Sent Mr timchen to the Conservatives to 2il the gap, and after receive ereal its a moment of consternation the party pirits and it grew to be as strong as befire, when As-thur Halfour developed into a skilful brader of the House. Kandolph Churchell's attitude neward his side friends, while it was independent and critical, espeprogramme, was not at all factious or embarrassing He apprehines spoke contemptanuals of the Liberal I nionists, and he had a bitter querrel with Joseph chamberlain over the central division of Birmingham, which he regarded so his by right after the death of John Bright. He finally agreed to refer the matter to arbitrators, who accorded the sent in the Literal Chionista. He emdica world as an imdegenities member to play a part in social legislation, into a ing a licemoing bill for the restriction of the deat to

n was a provided compensation for retailers and was I at to the browers. On the labor question he took alvaled views, promising to support an eight hour link, and thus became more than ever the idol of the working classes. General paresis crept upon him and sails this mental vigor. Toward the last his speeches to l'ar lament were rambling and incoherent. In Is I be went to South Africa for his health and to care money with letters to the London "Graphic. He physicians sent him on a tour round the world. In Egypt, where he was sinking fast, he begged his wife to take him home to die. Lady Randolph thurshill, a daughter of Leonard Jerome, of New York, was her husband's efficient helper in all his electoral contests. Lord Randolph Churchill was the originator of the Primrose League.

Clarke Hyde an English philologist, born in London in 1814, died there March 1, 1895. In his early manhosal he was employed in the British diplomatic service. He became an expert engineer and a railread promoter, was the founder of the London and tounty bank, organized the Council of Foreign Bondholders in 1868, and long took an active part in Oriental finance and politics. Though actively engaged in affairs, he acquired a knowledge of a great number and variety of languages, and wrote speculative books on philology and ethnology. Among his published works are: "Pre-Hellenic Inhabitants of Asia Minor," "The Connection of the Languages of India nor," "The Connection of the Languages of India and Africa," "Prehistoric Comparative Philology," "The Khita and Khita-Peruvian Epoch," "Serpent and Siva Worship and Mythology," "The Earliest English," and "Early History of the Mediterranean Populations!

Collett. Mrs. Jacobine Camilla Wergeland, a Norwegian novelist, born in Christiansand, Jan. 23, 1813; died in Christiania, March 7, 1895. She was the sister of the post Henrik Wergeland. She was educated at the Herrnhut Institute in Christiansfeld, and from 1854 to 1837 traveled in France and Germany, studying literature. In 1841 she married Prof. J. P. Collett, and at his death, in 1851, she left Norway, and lived in several European cities successively, returning to Norway ten years before her death. In 1855 appeared her most remarkable book, "Amt Mandens Döttre" (The Sheritt's Daughters), which was very popular in Norway and has often been translated. "Ide Large Nacttor" (In the Long Nights) was published in 1863, and "Sid ste Blade" (Last Leaves) in 1868, She was an advocate of the rights of women, and

wrote much on that topic. Craik Georgiana see May.

Cundall. Joseph, an English author, born in Norwich in 1818; died in London, Jan. 10, 1895. He learned the printer's trade in Ipswich, went to London, and originated illustrated children's books of a better class than had before been printed, himself writing Taxes of the Kings of England," for which John to last drew the pictures, established a publishing Sound y brought out the "Home Treasury,"

attaining the rank of commander. After succeeding to the estate of his uncle at Fetteresso, he was elected in 1861 to Parliament to represent Banffshire, which returned him six successive times without a contest, He became a recognized authority on naval affairs, was a Liberal whip, and was a junior lord of the Admiralty from 1882 to 1885, and was made a civil lord in 1886. In February, 1893, he was appointed Gov-ernor of New South Wales. He was knighted in 1894.

Dumas, Alexandre, a French novelist, born in Paris. July 28, 1824; died there Nov. 27, 1895. the son of Alexandre Dumas, the elder, and grand-son of the famous mulatto general of the army of Napoleon. He was educated at the school of Goubaix and the Collége Bourbon, where he was known as an intelligent, but not brilliant student.

after leaving college at the age of seventeen published "Les he Péché de la Jeunesse," a collection of indifferent poems. He had no great success with his first novel, "Adven-tures of Four Women and a Parrot," published in 1846, after he returned from a tour in Spain and Africa with his father. "La Dame aux Camélias," published in 1858, created a tremendous sensation, which never has died out, owing to the pathetic power of his style and to the repre-

sentation of the principal character on the stage by great actresses and the reproduction of the theme in Verdi's opera of "Traviata." It was based on the life history of a woman of his acquaintance, one Marie Duplessis. Dumas, the younger, while not so prolific an author as his father, wrote many novels and plays, most of which made an impression, while some had a permanent success. He sometimes took some moral problem of the day and treated it in a novel or a play strong in dramatic action and realistic character drawing, but having a didactic philosophical motive He was elected a member of the French Academy in January, 1874, and was made a grand officer of the Legion of Honor in 1894. His greatest successes in the drama were "Le Fils Naturel" (1858); "L'Amides Femmes" (1864); "Les Idées de Mme. Aubray" (1867); "La Princesse Georges" (1871); "La Femme de Claude," a dramatization of his novel "L'Affaire Clémenceau" (1873); "Monsieur Alphonse" (1873); "L'Étrangère" (1877); "La Princesse de Bagdad"

"LEtrangere" (1877); "La Princesse de Bagdad (1881); "Dénise" (1885); and "Francillon" (1887). Durnford, Richard, an English prelate, born in Sandleford, Berkshire, Nov. 3, 1802; died in Basle, Switzerland, Oct. 14, 1895. He was the eldest son of the rector of Goodworth Chatford, Hampshire, and was educated at Eton and at Magdalen College, Oxford. He was rector of Middleton, Lancashire, from 1835 to 1875, having taken priest's orders in 1831. While rector of Middleton he was honorary Canon of Manchester in 1854-56, and was preferred to the arch-deaconry of Manchester in 1867, becoming Canon of Manchester the year following. In 1870 he was made Bishop of Chichester. Although then in his sixty-eighth year, he entered upon his duties with great vigor, and for the quarter century that he administered the affairs of the diocese was noted as one of the most active prelates in the Establishment. Even after he had passed his ninetieth birthday he performed all his episcopal engagements as regularly as ever, and not many weeks before his death he was known to walk several miles after holding a service and preaching. He devoted himself with great earnestness to the furtherance of temperance, middleclass education, and other movements of the day.
Bishop Durnford was a High-churchman of an unaggressive type, and, though he held very decided opinions, never antagonized those of other people.
During his episcopate nearly every church within the diocese was enlarged, repaired, or restored.

Eisyef, Dr., a Russian explorer, died in St. Petersburg, June 3, 1895. He was a physician, and as a

arg, June 8, 1890. He was a pure state of the sedical officer in the army he visited all parts of the mesian Empire. He also made many explorations in 1893 he Asia, of which he published accounts. In 1893 he Mabell, and barely escaped. In making another atcapt in 1894 he was prostrated by a sunstroke; but a recovered and was able to join Leontieff's expe-

dition to Abyssinia.

Breels, Frisdrich, a German Socialist leader, born in 1920; died in London, Aug. 5, 1895. When he was twenty-two years of age he went to Manchester as agent for his father, who was a cotn manufacturer in Germany. On his journey homeward, two years later, he fell in with Karl Marx in Paris, and thenceforward he was the most lous and efficient of that agitator's licutenether they issued the Communist manifesto in 7. He returned to business in Manchester in sso, and became a partner in the firm in 1864, retir-ag in 1869 to join Marx in London. Together they rote the "Deutsch-Französiche Jahrbücher," and rward worked on the " Neue Rheinische Zeitung." n 1870 Engels became corresponding secretary to the nternational Society for Belgium, Italy, and Spain. labor, and produced independently a learned work on "The Condition of the Working Classes in Enghand" and a philosophical book on "The Origin of the Family." The rise and propagation of Socialist dectrines in England was largely due to his influence and teachings. He left unfinished a large work, parts of which have been published under the title socialism, Scientific and Utopian."

Everett-Green, Mrs. Mary Anne (Wood) an English historical writer, born in Shettleld in 1818, died in London, Nov. 1, 1895. She removed with her parents London in 1841, and in 1845 became the r. G. P. Everett-Green, an artist, whom she surved. Mrs. Green was for almost forty years emored in the Record Office as one of the editors of played in the Record Office as one of the editors of the Relis Series of State Paper Calendars, and ac-complished a vast amount of work in this depart-ment. She edited 41 volumes of Calendars, of 600 to 800 pages each, the latest from her hand compris-ing 886 pages. The list of works edited by her in-cludes "Letters of Royal and Illustrious Ladies of Great Britain" (1846); "Diary of John Rous" (1856); "Letters of Henrietta Maria" (1857); "Life of William Whittingham" (1870), Mrs. Green's only of William Whittingham" (1870), Mrs. Green's only nal work was one in 6 volumes entitled " Lives of the Princesses of England, from the Norman Con-

(1830-155).

Pathfell, Emily, an English author, born in Head-Surrey, in 1835; died in Manchester, May 31, M. Her father was rector of the parish in which she grew up, and she began early to take a keen in-terest in the condition of women. She determined to terest in the condition of women. She determined to aid practically in enlarging the field of employment for women. In 1860 she founded a printing establishment in London in which female compositors were employed. It was called the Victoria Press, and it turned out such fine specimens of Issak work, such as the "Victoria Regia," that the Queen appointed Miss Faithfull her printer and publisher in ordinary. In 1863 Emily Faithfull began to publish the "Victoria Magazine," in which for eighteen years she advocated the claims of women to renumerative she advocated the claims of women to remunerative employment in branches of business monopolised by She published in 1868 a novel, " Change upon Change," which had the same thesis for its moral, and lectured on the subject. In 1872 73 she gave her lectures in the United States and repeated the the United States

rebels in Rio Grande do Sul, and endeavored to keep up the struggle against the Government, though with little success. When his force of 700 men was cut to pieces at Cuareim, he took his own life.

Geffroy, Mathieu Auguste, a French historian, born in Paris. April 21, 1820; died there Aug. 15, 1895. He was educated at the Normal School, and was instructor in history at the Lycée Louis le Grand when he was called to the chair of History at Bordeaux in 1852. He made researches in Scandinavian history, and in 1854 he was sent on a mission to Sweden. In 1872 he became Professor of Ancient History at Paris, and three years later he was appointed director of the French school at Rome, where he remained until a short time before his death. He was formerly a frequent writer for the "Revue des Deux Mondes." His principal published works were "Histoire des Scandinaves" (1851); "Lettres de Charles XII. (1852); "Gustave III et la Cour de France" (1867); "Marie Antoinette: Correspondance Secrète" (1874); "Rome et les Barbares" (1875); and "Mme. de Maintenon" (1887).

Giers, Nikolai Karlovich de, a Russian statesman, born May 9, 1820; died in St. Petersburg, Jan. 26, 1895. He was sprung from a family of Swedish origin, long settled in Finland, and received his education in the imperial lyceum of Tsarskoe Selo. In 1838 he entered the Asiatic department of the Ministry of Foreign Affairs. In 1842 he was appointed secretary to the consulate at Jassy, and after that he was often intrusted with minor diplomatic missions. In 1848 and 1849 he was attached as diplomatic agent to the Russian army that invaded Transylvania to suppress the Hungarian rebellion. In 1850 he was appointed first secretary of legation at Constantinople. Dur-ing the Crimean War he was chief of the chancery of the imperial commissioner in the Danubian principalities, and when these were evacuated by the Russian forces he was recalled and appointed in 1858 consul general to Egypt. In 1860 he was sent back to Moldavia-Wallachia as consul general at Buchares From this post he was promoted in 1868 to be min ter to Persia. He remained in Teheran till 1869, when he was appointed minister at Bern, whence he was transferred, in 1872, to Stockholm, In 1875 Prince Gortchakoff, whose niece, the Princess Cantacuzene, was his wife, recalled him to St. Petersburg to fill the post of assistant to the Minister of Foreign Affairs. He was intrusted with the reorganization of the Russian consular service, and also took charge of the Asiatic department. The aged minister chose him in preference to more brilliant and ambitious diplomatists, as one of these might supplant him. M. de Giers exerted what influence he had to avert the Turkish war, and after it was over his prudent counsels had more weight with the Czar than those of the rash Panslavists, who would have defied Europe and defended the San Stefano treaty against a military combination that Russia could not successfully op-pose. Prince Gortchakoff was so frequently ill that his assistant was acting minister for long periods. In the negotiations with England about Afghanistan in 1878, and about Merv in 1881, M. de Giers was not dismayed by threats and bluster, but with imperturbuble tenacity preserved all the advantages of the situation. He arranged the treaty with China that provided for the evacuation of Kuldja. After the Congress of Berlin he was practically the Minister of Foreign Atlairs. He saw that the treaty of Berlin was faithfully carried out. On April 9, 1882, he was appointed Minister of Foreign Affairs, Prince Gortage and Congress of the State of S chakoff having at last resigned. He endeavored to establish more friendly relations with Germany and Austria, but at no time did he possess the authority and initiative of his predecessor, for Alexander III endeavored to direct the foreign policy and sought advice in various quarters. In the settlement of the new quarrel with England over Afghanistan in 1885, and the negotiations for the delimitation of boundaries in the Pamirs, he gained all the points for which he contended. While he was ever fearful of a conist in Europe, knowing all the dangers of the Eastern question better than any man, his diplomacy won advantage after another in Asia, and extended influence and prestige of Russia in China, Afteriate and Peria. The Franco-Russian ententer telleved to have been brought about without his tive co-operation and in spite of his misgivings. When the last Czar died, M. de Giers, who was then invalid, desired to retire, but Nicholas II would the conse with his services, Prince Lobanof, his timed successor, being needed at Berlin.

history, a German philosopher, born in Laubical in 1844; died in Greece, March 17, 1895.

Leading in Berlin, at first medicine, then history, and philosophy, and after serving as a solventrough the Franco-German War became a solven. He went to Zurich in 1878, and four years he was appointed professor at the Polytechian. In 1863 he went to Halle as extraordinary and in 1874 became Professor of Philosophy

In 1853 he went to Halle as extraordinary that and in 1874 became Professor of Philosophy the Kiel University. His chief work was "Abriss appliesophischen Grundwissenschaften" (1880-'88). Center, a German painter, born in Königstein Des. 14, 1821; died in Berlin, Jan. 6, 1895. He die Desseldorf, and in 1846 exhibited a picture of a scene in the "Nibelungenlied." Afterward estimated his studies in Antwerp, Paris, Munich, and Bones, and in 1852 he settled in Berlin, where the arried out a design of Kaulbach's in the painting of Charlemagne and Wittekind in the new museum. It is eld museum he painted pictures in the porticology the adventures of Theseus and Hercules. Simple paintings of scenes in German wars hang in Kational Gallery. Since 1862 he had devoted his felicity to portrait painting. He painted large of Demosthenes, Phidias, and Solon for the Calaberg University, and exhibited two studies the nucle entitled "Felicia" (1879) and "Mär-

(1820).

The Batrick, an English soldier, born in Auchardier, Scotland, in 1804; died in Chelsea, Marchard, Scotland, in 1804; died in Chelsea, Marchard, Scotland, in 1804; died in Chelsea, Marchard, Scotland, in 1804; died in Chelsea, Marchard he Mahratta war under Lord Gough, whose mair he married, and returned to England as it composition to Kohat. He served in India the Sepoy mutiny, winning the grand cross to Order of the Bath. He was commander in the Madras army, and for two months held the Madras army of the Madras army and for two months held the Madras army of the Royal Military Hospital Scotland, where his administration was a second successful. Not long after his return he appointed governor of the Royal Military Hospital Chelsea, and the rest of his life he passed in the Madras and English poet and physician,

Halls, Sir Charles, a Gertman indexedual from count Elberfeld, Germany, April 11, 1e15 7 Gerd in Manchester, England, Oct. 25, 1855. When quite pointing he went to Faris and because well known as a journel At the time of the French Revolution of These he went to England and presently because directed of the Musical Institution, in Mathematical file faints as a conductor dates from 1807, when he bugan the annual series of 26 orchestral and chord conserving that have been given uninterruptedly classe them. He ranked first among classical presents in England, and was the author of musical ecompositions of high grade. He was knighted in 1800 and in the same year married his account wife, the noted violation an artist, and his daughter a sculptor.

Rind John Ressell, an English astronomer, been in Nottingham, May 12, 1823; dired in Twickentham, Past. 22, 1896. In 1843 he became a fellow of the Astronomical Society, and in 1847 discovered his first asteroid, Iria, for which he received a gold modal from the King of Denmark. Later he discovered 2 stone. For his discovery of 4 in a single was he received for the third time the Lalande modal from the Assell cmy of Sciences at Paris and a prize of 1800 frames. He contributed to English and foreign soluntific jumpals, and was for a long time superintendent of the Nautical Almanac Office. The most important of his published works are: "The Solar Systems (1985); "Astronomical Vocabulary" (1852); "Hustrated London Astronomes" (1853); "Hustrated London Astronomes" (1853).

(1802); "Hustrated Lemion Accomme 1 1902; Limall, Paska, ex. Khedive of Egypt, form in Calon, Dec. 31, 1830; died in Constantinople, March 1, 1806. He was the second son of Iterahim Paska and a grandson of Mehemet Ali. Both were dead before he grew up, and his cousin Abbas came to the throne, after whom, in the order of succession, under the hatte sAcreef of 1841, whereby the valiship passed to the eldest descendant of the founder of the dynasty, were his uncle Said and his brother Achmet Learned was one of the leaders of the Princes' party that opposed Abbas. Ismail was educated in Parts, and when his uncle become Vali he was sent abroad on missions to the Emperor of the French, the Pope, and other Earopean rulers. He escaped a suspirious radiousl accident by which his elder brother lost his life, and his returned safe from a military expedition to the Sou-dan and succeeded Said on Jan 18, 1862. Isomoli found himself in possession of Snancyal resources that appeared to be boundless, for the American excel was had raised the price of coston from 11 conts to 40 cents a pound, adding \$100,000 and a year to the national income. His ambition was to become the independent ruler of a powerful and prospectus asindependent ruler to a paid and energytically to accomplish his objects with the help of contrations, diplomatists, and financiers, European and Oriental, and he was decrived and defrauded on every band. lought, by increasing the annual tribute from \$24,000 to 790,000 liras, an acressors of dignity and power from the Sublines Ports, having the title of Vall changed to Khedive, and the under of direct descent from father to som established in place of the Mo-hammedan law of emorusaion, but his wife managed to have primageniture decreed, whereas he expected to choose his herr and shut out his eldest one, where he distiked He intrinted Nober Poobs with the suger tintoen for the curtailment of the extraterrisorial comouter jurisdiction, under which foreigness were exempt from the laws of the lands and from all taxation really was the evalues of international tribumals that inendormaly introduced European control and executably deprived him of his sovereign rights said cost him his threes, for the new tribenals had jurisdictive over the Khedive's Government and his estates. taking over the incumbered and impoverished farms of the fellakin the Khedive gradually became aware of a great part of the land of Egypt and the color

mous estates thus amassed were brought to a high state of cultivation. The railroads of Egypt were greatly extended, the cultivation of sugar was introduced on the Khedive's estates at enormous expense, and the canals were improved and multiplied. were made at Alexandria and Suez. Ismail also built many sumptuous palaces, maintained a superb opera and ballet, and feasted and entertained every person and ballet, and reasted and entertained every person that visited Egypt. Every European speculator that started an enterprise in Egypt could rely on the finan-cial aid of the Khedive if he found himself pecuniarily embarrancel. When Ismail ascended the throne he found that Ferdinand de Lesseps had secured concessions that were embarrassing and dangerous to the state. To rectify his predecessor's mistake he was willing to jusy heavily, and he generously referred the question of compensation to Napoleon III, who fixed the award at 100,000,000 francs. The Khedive foresaw the political danger that the building of the Suez Canal involved. If he could have done so safely, he would have canceled the concession; but since he could not withdraw, he worked zealously to make the canal a success, relying on the friendship of the French to avert evil consequences, and this friendship he endeavored always to retain, at the cost of heavy pecuniary sacrifices. Ismail Pasha, after obtaining in 1866 the title of Khedevi-Misr, a recognition of sovereignty, increased his army and acquired a fleet. But this excited the jealousy of the Porte, which, in 1870, with the support of the great powers, required him to deliver up the armor-clads. In 1868, when Ismail was received as a fellow-sovereign at the European courts, and afterward entertained, with regal pomp and splendor, the French Empress and the Prussian Crown Prince at the opening of the Suez Canal, he reached the zenith of his glory, but not the summit of his ambi-tion. In 1873 he distributed an immense sum in bribes among the dignitaries of Stamboul, to obtain a new firman, which transformed Egypt into a pracnew arman, which transformes ogypte in a literally independent tributary state, requiring only an acknowledgment of the suzerainty of the Sultan and military aid in case of war. He then set about the subjugation of the Soudan, conquering Darfur in 1874. but failing in a campaign against Abyssinia. Ismail and Egypt were already embarrassed in their finances. From the first the international money lenders had him in their power. With railroads, harbors, irrigation works, sugar mills, armaments, and palaces half finished, and innumerable industrial enterprises under way, for which he had made himself responsible, he could only keep things going by submitting to ex-tertionate terms, issuing bonds for which he received only a fraction of their face value, and renewing loans with others of longer term, with 25 per cent, compound interest added. The productive and taxpaying ray d.ty, owing to his improvements, but did not keep pac with the debts that were thus multiplied on page r without any equivalent consideration being a real least the Khediye was compelled to sell to British Government for £4,000,000, with which t annucleate obligations, his 177,000 shares in z canal. ministers while preserving the dual control. great powers thereupon, through their consul generals, demanded the abdication of Ismail Pasha. Herefused to resign at their bidding, but submitted to be formally deposed by his suzerain, when the Porte, under pressure from England and France, was induced to issue the decree. On June 26, 1879, Ismail Pasha formally abdicated in favor of his son Tewfik. and on July 1 he left his country forever. He sailed for Constantinople, but was forbidden to land there He lived in Naples until politicians raised an outery against his being allowed to keep a harem, and re-mained in Rome also a short time, and went in 1688 to Constantinople, where he spent most of the remainder of his life without holding any intercourse with the Sultan, and really interned by the Ottoman

Krestowsky, M., a Russian novelist, born in the government of Kieff in 1820; died in Warsaw in February, 1895. He served in the Russian otheer of Uhlans, first in the line and afterward in the guard. During the Russo-Turkish War he was at tached to the general staff as historiographer. Among the most esteemed novels, many of which have been translated into French, are: "Une Créature déyoyée, mens chère"; "The Sphynx"; "En voyage"; "Le Troupeau de Panurge"; "Sous les Châtaigniers"; "Le Diablotin"; "My Uncle Bujanoff"; and "Mme.

Ridnieff."

Lauth, Franz Josef, a German Egyptologist, born in 1822; died in Munich, Feb. 11, 1895. From 1869 he was a professor in the University of Munich and conservator of the Egyptian collections. His most important published work was "Manetho und der Turiner Königspapyrus." He also wrote "Die Geburt der Misserand der Carpinischen Schale." burt der Minerva auf der Cospiarischen Schale"; "Das Germanische Runen-Fudark"; "Das Univer-"Das Germanisene Runen-Fudark"; "Das Universal-Alphabet auf der Grundlage des hebraisehin Systems"; "Les Zodiaques de Denderah"; "Moses der Ebräer, aus zwei Papyrusurkunden"; "The Historical Results of Egyptology"; "Aegyptische Chronologie"; "Homer und Aegypten"; "Aus Aegypten Vorzeit"; "Moses-Hosarsyphos-Saliehus"; and "Die Pianobi-Stela" Pianchi-Stele."

Locker-Lampson, Frederick, an English poet, born in Greenwich in 1821; died in Rowfant, Sussex, May, 30, 1895. He was a son of Edward Hawke Locker, who founded the Naval Gallery at Greenwich Hospital, and was for some years precis writer in the Admiralty. Among writers of vers de société he ranks among the first, standing in much the same relation to his own generation that Mackworth Praed hatton to his. His touch is the lightest possible, and his humor never becomes flippant. Among his best poems are "A Nice Correspondent," "At Her Window," "A Human Skull," "Little Dinkey," and "The Housemaid." It has been well said of him that "he has set small talk to music, and so adroitly that he never checks the flow of conversation." His first wife was a sister of the late Earl of Elgin, and his second wife a daughter of Sir Curtis Lampson. After the death of his father-in-law Mr. Locker added the name Lampson to his own. His published works include "London Lyrics" (1857; new edition, 1870); "Lyra Elegantiarum" (edited, 1867); "Patchwork" (1879).

Loven, Sven, a Swedish naturalist, born in Stock holm in 1809; died there Sept. 4, 1895. He was a son of the Mayor of Stockholm, and after taking his degree at Lund he went to Berlin and attended lectures on natural history. Returning to Sweden, he devoted himself to studying the maritime fauna of the coasts of countries bordering on the North Sea and the Baltic. He became a professor and con-servator of the Museum of Natural History at Stockholm in 1841. Among his numerous scientific memoirs are the following: "O Evadne" (1835): "Campanularia and Syncoryne" (1836); "Evertebrate Animals" (1840-'49); "Development of Lamelli-branchiates" (1848); "Glacial Marine Crustacea" (1862); "Portalesia" (1873); "Echinoidea" (1874); * Species of Echinoidea described by Linnaus" (1887); and " Echinoconide" (1888).

Ladwig, Karl, a German physiologist, born in Wit-enhauses in 1816; died in Leipzig, April 25, 1885 He was graduated as doctor in 1539, and because a privat decent in the University of Marburg in 1842. le was a professor at Zurich from 1849 till 1855, and then became professor in the Vienna Academy of Military Surgery. For the last thirty years he was Professor of Physiology at Leipzig. He brushed solds the transcendental theories that beclouded his science, and soon attracted students from all corners of the globe. His first published work was " Mechsalsm of Urine Secretion," explaining the formation of urine in the kidneys on purely mechanical princi-Prof. Ludwig invented the kymograph and ther instruments for the graphic recording of physiological processes. He made important researches on the circulation of the blood, observing how this was influenced by respiration and acted upon by the medulia oblongata. He noted also the action of the nervous system as affecting glandular secretions. Important discoveries in pathology are due to him.

Lemby, Joseph Bawson, an English elergyman, born in Stanningly, Yorkshire; died in Grantchester, England, Nov. 21, 1895. He was one of the revisers of the Old Testament, and at the time of his death was Professor of Divinity at Cambridge. He was the sather of "Early Dissent, Modern Dissent, and the Church of England" (1870); "A History of the Cresds" (1873); "A Popular Introduction of the New Testament" (1883); and "Greek Learning in the Western Church during the Seventh and Eighth

duff. John Ross, a Scottish divine, born in Bonhard, Perthshire, in 1818; died in Chislehurst, April 30, 1895. He was educated at the University in Edinburgh, and was ordained as minister of a parish in Forfarshire in 1843, whence he passed to a l'erth-shire parish in 1849, which he left to take charge of a new church in Glasgow. He preached there fifteen years, and then went to live in Kent and give himself up entirely to literary work. His best-known books are: "The Prophet of Fire"; "Memories of Bethany "; "Memories of Gennesaret"; "The Shepherd and His Flock "; "Sunset on the Hebrew Mountains "; "Comfort Ye"; "The Golden Gospel"; "Morning and Night Watches"; "The Bow in the Cloud"; "The Story of a Dewdrop"; and "The Story of a

Malagola, Amilcare, an Italian prelate, born in Modena, Dec. 24, 1840; died in Fermo, June 22, 1895. He entered the priesthood at an early age, became widely known for his eloquence and learning, rose to Archbishop of Fermo, and was created a cardinal,

Jan. 16, 1893.

Wartha, Benjamin Constant, a French historian, born in Strasburg, June 4, 1830; died in Paris, May 28, 1895. He studied in the École Normale, and became a professor at Strasburg in 1843, and in 1854 went to uat as Professor of Ancient Literature, whence he transferred to Paris, and became Professor of Latin Eloquence at the Sorbonne in 1865. He was chosen a member of the Academy of Moral Sciences His most famous works were " Les Moralistes

which were crowned by the Academy.

Let Mars. Georgiana Marion Craik, an English novel t, born in Loudon in 1831; died in Saint Leonard's, Nov. 1, 1895. She was the second daughter of George Craik, the well-known author, and married A W. May nine years before her death, but continued to be known in the literary world as Georgiana rank Her first novel, "Riverston," appeared in 1857, and after that date she published a book nearly every year. Her work was all well done, showing skill in haracter drawing and in construction of plot, and her books were deservedly popular. They include "Lost and Won" (1859); "My First Journal A Book for the Young" (1860); "Play-room Stones" 1862. "Winifred's Wooing" (1862); "Faith Unwin's Or deal" (1865), "Leolae Tirre;"

line Mett-rnich, who was an intimate friend of the Empress Engenic, were prominent figures. He arranged the neeting between Napoleon III and Franz Josef at Salaburg After Sedan he aided in the escape of the httpress. He was recalled on the fall of the empire, and thenceforth took no part in public affairs charpt to note with the Moderate Conservataves in the Austrian Chamber of Peers. He was de-

tives in the Austrian Chamber of Feets. He was devoted to mass., and produced several compositions.

Meyer Ham Withelm, a Danish surgeon, born in 1834, died in Venice, June 3, 1895. He practiced his profession in Copenhagen. In 1867 he discovered in the chlargement of the glands between the nose and the threat not only the most common source of deafness, but a very frequent cause of arrested physical

and mental development in children.

Meyer, Julius Lothar von a German chemist, born in Varci, Oldenburg, in 1830; died in Göttingen, April Varia, Oldenburg, in 1830; died in Gottingen, April 14, 1805. He became director of the chemical labora-tory at Breslau in 1859, and in 1868 went to Karls-ruhe as Professor of Chemistry. He was called thence to Tubingen in 1876, and in 1885 he accepted the chemical chair at the University of Göttingen. His most celebrated works are: "Die Gase des Blutes,"
"Die Modernen Theorien der Chemie," and "Die

Atomgewichte der Elemente.

Moncrieff. Lord James Wellwood. a Scottish jurist, born in Edinburgh in 1811; died there April 27, 1825. He was educated at the University of Edinburgh, was admitted to the bar in 1833, and after a brilliant career as an advocate, rose to be Solici-ter-General in 1859, and Lord Advocate in 1857. This post he held in all the Liberal ministries, sitting for Leith, Edinburgh, and the Universities of Glasgow and Aberdeen in the House of Commons, until he was raised to the bench in 1869 as Lord Jus-In l'arliament he labored to establish a national system of education in Scotland, and he carried several measures modernizing the old educa tional institutions. He was elected rector of Edinburgh University in 1868. He was made a baronet in 1871, and in 1874 was raised to the peerage as Baron Moncrieff of Tulliebole. In 1888 he retired. Lord Moncrieff wrote much for the "Elinburgh Review," and to "Fraser's Magazine" he contributed a novel entitled "A Visit to my Discontented Cousin,"

Moore Heary, an English artist, born in York in 31; died in Margate, June 22, 1895. He was a son 1831; died in Margate, June 22, 1895. He was a son of William Moore, a portrait and landscape painter, and brother of Albert Moore, the decorative painter. Henry won a high reputation as a painter of English scenery in broad style on small canvases before he devoted himself to the study of the open sea, and developed a rare art of catching the play of the wind and light upon its surface, and all the forms of waves. His pieces, in stly showing a plain expanse of water, studied in the English Channel, unrelieved by rock or shore or sail, were exhibited and admired in Paris ben; before they were appreciated by English critics and amateurs. He was made an associate by the Haya' Alademy in 1885, and an academician in 1893.

In 1866 he was made K. C. B. He was a man of varied expebooks was noted for good humor and fair-minded-ness. He published "Travels in North America during the years 1832-'36" (1839); "The Prairie Bird:
A Tale" (1844); "Hassan, or the Child of the Person A Tale "(1844); "Hassan, or the Child of the Pyramid" (1857); and "Noureddin, or the Light of the Faith" (1883).

Noailles, Jules, Duc de, a French economist, born in Paris, Oct. 12, 1826; died there March 6, 1895. He devoted himself to economical studies, visited England and the United States to study their economic conditions, and published works on the subject While his brother was a professional diplomat, long the French minister to the United States, he took no active part in public affairs, but was one of the leading supporters of the Conte de Paris until the pretender entered into the alliance with Boulanger. Till he succeeded his father, in 1885, he was known as the Due d'Ayen. His works include "De la Décentra-lisation en Angleterre," "Revenue, Capital et Travail," "Recherches sur l'estimation de la Richesse nationale

et privée en France et en Angleterre," and "Cent ans de République aux États-Unis."

ONeill, John, an English philologist, died in Sell-ing, Kent, in January, 1895. He was a clerk in the British War Office for many years, and afterward was sent to Cyprus as accountant general when the Brit-ish administration was first established there by Sir Garnet Wolseley. In that capacity he adjusted to the new system the complicated and irregular fiscal arrangements bequeathed by the Ottoman rulers and fixed the exchange values of the many sorts of cur-rency used in the island. He devoted his mind to the mastering of languages and was a frequent contributor to the philological journals of London and

Paris. He was author of a philosophical work on comparative religion entitled "The Night of the Gods."

Opel, Julius, a German historian, born in Loitschütz,
July 17, 1829; died in Halle, Feb. 18, 1895. He
studied history and philology at the University of
Halle and became a collaborator at the Francke Institute in 1864, and subsequently director of the Halle Gymnasium. He was a hard-working member of the historical commission of the province of Saxony, and for many years president of the Thuringio-Saxon Historical Society. Some of his numerous works are: "Der Niedersächsische Krieg, 1621-23"; "Der dänische Krieg von 1624 bis 1626"; "Der dänische Krieg von 1627 bis züm Frieden von Lübeck (1894); and a memoir entitled "Denkwürdigkeiten des Rathsmeisters Spittendorf" (1894).

Ormsby, John, an Irish scholar, born in Gartner Abbey, Mayo, April 25, 1829; died in Ramsgate, England, Oct. 30, 1895. He was educated at Trinity College, Dublin, contributed frequently to periodicals and was the author of " Autumn Rambles in North Africa" (1864) and "Stray Papers" (1876). He was best known as a Spanish scholar. He translated "The Poem of the Cid," with introduction and notes (1879), and also "Don Quixote," with introduction and notes (1884). His version of the Cid is the only complete one in English, and comes as near as possible to the

spirit of the original.

Palmer, Edwin, an English elergyman, born in Mix bury, Oxfordshire, July 18, 1824; died in Oxford Oct. 17, 1895. He was the youngest brother of Lord Selborne. He was educated at Oxford, and was a fellow of Balliol from 1848 to 1867. He became Professor of Latin in the university, in 1870, resigning that office in 1878 on being appointed Archdeacon of Oxford. He was a ripe scholar, deeply versed in the literature of Greece and Rome, and as tutor and professor at Oxford filled, as has been well said of him, "an eminent place among eminent colleagues." was one of the revisers of the New Testament and edited the revised Greek text.

Palmer, Sir Roundell, an English jurist, born in Mixry, Oxfordshire, Nov. 27, 1512; died in Petersfield, amishire, May 4, 1895. He was educated at Eughy al Oxford. He was always a High-churchman, and at Paford his especial friends were Claughton, afterward ishop of St. Albans, Wordsworth, afterward lishop of St. Albans, Wordsworth, afterward lishop for Andrews, and Faber. Among his friends in the life was Tennyson, who dedicated "Becket" to im. He was called to the bar at Lincolnt. 7. and very soon rose to eminence in his profes-He was returned to the House of Commons in 547 as member for Plymouth, and afterward sat for Schmond. He was knighted in 1861, and from 1863 o 1866 was Attorney-General in Lord John Russell's ond administration. He strongly opposed the dis-blishment of the Irish Church, declining the offer The chancellorship and a peerage rather than sup-ort that measure. In 1872 he became Lord Chan-silor and was elevated to the peerage as Haron Sel-orne. As counsel for Great Britain in the internacourt of arbitration which met at Geneva to the "Alabama" dispute, he showed signal ects of "Alabama" dispute, he showed signal set and ability, and the same qualities were conjugues in his two years on the woolsack at this cried and from 1880 to 1885, when he was Chancelow for the second time. When Mr. Glacistone's third denistration was formed in 1888. stration was formed, in 1886, Baron Selborne lined to enter the Cabinet on account of his opposito the Premier's home-rule views. For the rest a life he remained a Liberal Unionist. He spoke at the home-rule bill in the House of Lords in and the nome-rule out in the House of Lords in 68, and actively opposed Lord Rosebery's proposi-in to disestablish the Welsh Church. He published 1862 a hymnal entitled "The Book of Praise," such valued for its able editing, and contributed the sele on "Hymns" in the ninth edition of the "Enclopedia Britannica." He was also the author of A Defense of the Church of England against Dis-tablishment" (1886) and "Ancient Facts and Fic-

catablishment" (1886) and "Ancient Facts and Fictions concerning Churches and Tithes" (1888).

Payas-Buith, Bobert, an English clergyman, born in
Calpping Campden, Gloucestershire, Nov. 7, 1819;
died in Canterbury, March 31, 1895. After leaving
Caford he took orders, and was successively curate at
Crendon, Long Winchenden, and Thame. In 1853
he became head master of the Kensington Proprietry School, and in 1859 sublibrarian of the Bodleian
Library. He published in Syriac and English the
commentary of Cyril of Alexandria on St. Luke
(1859); a translation of the third part of the "Eccledistical History of Johannes Ephesus" (1860); a

Catalogue of the Syriac Manuscripts in the Bodleian "Catalogue of the Syriac Manuscripts in the Bodleian Library" (1865); a manuscripts in the Bodleian Library" (1865); and "The Authenticity and Messianic Interpretation of the Prophecies of Isaiah" (1982). In 1865 he was made Professor of Divinity at Oxford, and he was Bampton lecturer for 1869, the mbject being "Prophecy a Preparation for Christ." in 1870 he accepted the deanery of Canterbury, and in this office his moderate views made him popular and with the various schools of thought in the Church, but with the various schools of thought in the Church, but with the nonconformists as well. His read work as an Oriental scholar was the "Thesaurus syriscus," on which he was engaged for the last irty-six years of his life. He was for fifteen years member of the Old Testament Revision Committee 70 to 1885). His later publications include an apposition of the Historical Portion of Daniel "Sol and several commentaries.

Sir Robert, an English politician, born in Lon-

May 4, 1822; died there May 9, 1895. He was eldest son of Sir Robert Peel, the statesman, and bedded to the baronetcy at his father's death, in d was ranked among the Liberals for many years, afterward allied himself with the Conservatives. when he was defeated in 1889 as a Conservative

date his political career came to an end 842; died in Rio de Janeiro, June 29, 1-25 He en. tered the Brazilian army, and served through the war with Paraguay in 1865-70, after which he resigned to oversee his estate. After the next clarce had reduced tim about the inthe army again the the overther of the at once gave his adheson to the rependent of the rependent of the first one of the first on of the republic in 1001. He soled with the a wife sional party and the many in their remediance to the dictatorship of President Fonseen, but when the adter retired, transferring the supreme power to 1 in he stood firmly by the temeditation and combucted the civil was that followed with energy and temous finally overcoming Admiral de Melou. He minutes fully completed his term of office as Acting Press dent in November, 1894, and then pracefully sungered his powers to his elected encuesco, Producte de Morney, and withdrew from pedition

Persico, Ignacio, ati Italiani persiate, term in Nagden, Jan. 30, 1825; died in Roene, Den 7, 1806. He was

Pools, Reginald Stuart, an English Egyptological born in Loudon, Feb. 27, 1882; dead there Feb. 2, 1892. 1990. He was taken to ngypt when hen years or ago by his uncle, Edward Lane, and during the years that he spent there, while his uncle was compuling the "Arabic Lexicon," he became so deuply engressed in Egyptology that at the age of accommon he works the papers on Egyptian chronology that were after-ward published under the title "Hors: Agyptinos" (1851). In 1852 he obtained a place in the depart-ment of antiquities in the British Museum. He lastured on Egyptology and numiematics. In 1888 he was appointed assistant keeper of coins in the mus-seum, and in 1870 he successed his chief, Mr. Vana. He was one of the earliest and most ingenious stadents of the lessons in art and history to be rund in coins. During the twenty two years that he was keeper of coins he edited 25 volumes of the cetainguin of Greek, Roman, Anglo-Saxon, Persian, Arabic, Indian, and Chinese coins. He published "Cities of Egypt" (1882). In 1885 be because Professor of Egypt" (1882). In 1885 be nee Archieology at University College. Ruleian mainter,

Portacla, Jean, a Helgian painter, been in Vilvende in 1813; died in Brussele, Feb. 9, 1816. He wen the Roman prize at the Paris Art School in 1842, and after completing his studies in Home went to Egyps. where he painted a portrait of Mehemet to and made many sketches that were exhibited at the Paris Exposition of 1835. From a second separate in this Orient he brought back many new studies. He squad also considerable time in Hungary In 1632 to was appointed director of the Art Acudemy in tohend and in 1863 he went to Brussels as a professor on the areal emy, of which he became director in 1817 his earlier works reflected the structly classes mathed, he gradually emancipated himself from cussor tradi-tions. His "Loge de l'Opera de l'està." hange là the Brussels Museum. He established in 1666 a free ate lier, in which were trained finish Washers, Comming Impone, and other eminent artists.

Rawlinson, hir Heary Creavishs on English Orientallet, been in Oxford, April II, 1810, dead in Louisdon, March S, 1895. He went to Bounday in 1927 as a military cadet of the East Tedia Company. He had already begun the study of thriental languages, and he broatte so predicient in Persian and Mahrames that in less than a year he was made interpreter, and after another year paymenter of his regiment. In. 1 636 1840 to very e treperal sent him, with other others, to Pers a, in eventuel with the scheme of giving male During the est years that tars a lite that committy he rema tred there he diled various peats, from parmaster to charge deferred. He traveled through Uniquence, and discovered archaeological remains, to the study of which he gave much attendien. He said he bricher offere were recalled when war win declared against Person in comorquence of the blat of attack upon Herat. He was sent to Cabal so and a sel to the British envoy, and was soon appointed proagent at Cambahar.

at 1'a al Hawlinson turned all the Afghans out of the city and prepared for the siege that followed. His disposition of the artillery saved the city from being taken by assault when the Aighans burned one of the gates. In the battle of May 29, 1842, he saved the day with a band of Persian cavalry that he had Major Rawlinson finally retired with the trained He obtained the appointment of resident garrison. He obtained the appointment of resident for the East India Company and British consul at Hagdad, where he remained from 1848 till 1856. Then he returned to England, was elected to Parliament in 1857, advocated the transfer of India to the Crown. and when the bill was passed in 1858 was made a member of the new India Council. In 1859 he was sent to Persia as minister plenipotentiary, remaining raised the cry of warning against the Russian advance in Asia. He was made a life member of the India Council in 1868. After the Russians annexed Khiv he published "England and Russia in the East After the Russians annexed Khiva His earliest archmological notes are found in a parrative of a tour through Susiana and Elimais in 1837, which he supplemented with a description of Echatana that carned for him the gold medal of the He began to copy the cunei-Geographical Society. He began to copy the cunci-form inscriptions at Behistun in 1835. On his appointment to the Bagdad consulate he studied the remains excavated by Botta at Khorsabad, and through his familiarity with the old Persian characters on the rock tablets at Behistun he was able to decipher, in 1844-'45, the ancient Persian translations in which the Assyrian legends and history were preserved. In 1846 he published his first work on the cuneiform inscriptions. In 1847 he obtained complete copies of all the inscriptions, the most important of which were found in a dizzy location on a precipitous rock. These copies he took to England in 1849. He read during his visit the famous paper on the cunciform inscriptions of Assyria and Babylonia containing a translation of the inscription of the black obelisk. He deciphered an inscription brought home by Layard containing a chronicle of the war between Hezekiah and Sennacherib. In 1851 the British Museum granted £3,000 for excavations in Mesopotamia, for which Sir Henry Rawlinson employed Hormuzd Rassam. He was knighted on his return from Bagdad in 1856, and made a baronet in 1891.

Reeve. Heary, an English historian, born in Norwich in 1813; died in Christ Church, Hampshire, Oct. 21, 1895. He was educated at the Academy of Geneva, Switzerland. From 1837 to 1857 he was Registrar of the Privy Council, and in 1855 he became editor of the Edinburgh Review." In 1835 he published a translation of De Tocqueville's "Democracy in America," which passed through many editions, and in 1856 a translation of De Tocqueville's "France before the Revolution of 1789." He was also the author of a translation of Guizot's "Washington" (1840). His original works include "Graphidic; or, Characteristics of Itanters" [183]; "Boyal and Republican France" 1811; and "Petrarch," in the series of "Foreign

Saint-Hilaire, Jules Barthélemy de, a French statesman, born in Paris, Aug. 19, 1805; died there Nov. 22, 1895. He held a post in the Ministry of Finance when Charles X was king, and became a friend of Thiers and a contributor to the "Globe" and other journals. He signed the protest against the ordinances of Polignac with which the revolution of 1830 was inaugurated. When the Orleans Government was established he found that his ideas of government differed radically from those of Thiers and the organizers of the constitutional monarchy. He protested vigorously against the new order of things in newspaper articles, then withdrew from politics and devoted himself to translating Aristotle (1838). He was then called from the assistant professorship of French Literature in the Polytechnic School to the chair of Greek and Latin Philosophy in the Collége de France, and in the following year was rewarded with a seat in the Academy of Moral and Political Sciences. Cousin made him his first assistant in the Ministry of Public Education, but he soon retired to immerse himself for eight years in his work on Aristotle's complete writings and in the study of Sanskrit literature. the revolution of 1848 was accomplished he was elected to the Assembly, and for a short time was honorary secretary to the Provisional Government. After the election of Louis Napoleon as President he voted for certain repressive laws, but he refused to recognize the coup d'état or to take the oath of allegiance to the Emperor. Nevertheless he was requested to re tain his professorship in the Collège de France. He declined and went to Egypt with Lesseps when the latter was working out his Suez Canal project, and wrote a series of letters to a Paris newspaper. return he produced further installments of the translation of Aristotle, and treatises on Buddhism, the Vedas, the Koran, and Mohammed. He resumed his intimacy with Thiers, who made him secretary general of his Cabinet in 1871. This post he filled till 1873. In 1880 he succeeded Freycinet as Minister of Foreign Affairs in the Cabinet of Jules Ferry. He was a Conservative Republican and an advocate of conciliation, having no sympathy with the aggressive radicalism that prevailed in the Chamber. The remainder of his life was passed quietly in literary occupations and attending to his duties in the Senate, of which he was a life member. He published a "Life of Cousin."

Sala, George Augustus Henry, an English journalist, born in London in 1828; died in Brighton, Dec. 8, 1895. His father, an Italian, married a popular English singer, and the son was brought up with the expectation that he would become an artist. Young Sala, however, early became a contributor to "Household Words," as well as a close copyist of the style of Mr. Dickens. He founded the "Temple Bar Magazine," of which he was the first editor, and in the earlier portion of his career wrote much for periodicals. In 1863 he visited the United States as a correspondent of the London "Daily Telegraph," and in 1864 visited Algeria in the same capacity. During the Franco-Prussian War Mr. Sala was the war correspondent to the "Daily Telegraph," and he was dispatched by that journal to various parts of the world on other important occasions. For several years he conducted a weekly paper entitled "Sala's Journal," and having published in its columns in 1892 an attack on a labor organization known as the "Domestic Servants' Union" was subsequently mobbed in Hyde Park. He made large sums in journalism, but was recklessly extravagant and finally became bankrupt. The close of his life was imbittered by failing health and broken fortunes, although the "Daily Telegraph" granted him a pension of \$5,000 a year. A month before his death he became a Roman Catholic. He was brilliant and versatile, but his work was all ephemeral, and much of it is already forgotten. His many writings include: "La Belle Alliance" (1856); "A Journey due North" (1858); "Twice Round the Clock" (1859); "Lady Chesterfield's Letters to her Daughters" (1860); "Dutch

Pictures" (1861); "The Two Prima Donnas" (1862); Accepted Addresses" (1862); "Breakfast in Bed" (1863); "Quite Alone" (1864); "My Diary in America in the Midst of War" (1865); "Trip to Barbary by a Boundabout Route" (1865); "From Waterless to the Peninsula" (1866); "William Hogarth: Essays" (1866); "Charles Dickens" (1870); "America revisited" (1882); "Living London" (1883); "A Journay due South" (1885); "Famous People 1 have most "(1892); "My Life and Adventures" (1895).

**Miss Vandeleur" (1892); "My Life and Adventures" (1895).

**Banders John, an English novelist, born in Barnstaple in August, 1811; died in Richmond, March 29, 1893. His earliest book was a volume of poems, and in 1843 he published an excellent little work called "Cabinet Pietures of English Life from Chaucer."

**The People's Journal," the earliest of illustrated assgaines, was founded by him in 1846. Besides a draina, "Love's Martyrdom," he was the author of the novels: "The Shadow in the House" (1860); "Abel Drake's Wife" (1862); "Martin Pole" (1863); "One against the World" (1869); "Bound to the Wheel" (1866); "Hirell" (1869); "Israel Mort. Overman "(1876); "The Shipowner's Daughter" (1876); "The Lion in the Path" (1876); "Jasper Deane" (1877); "The Sherlocks" (1879); "The Tempter Behind" (1880); "The Two Dreamers " (1880); "Victor or Victim" (1883); "A Noble Wife" (1884); and "Miss Vandeleur" (1884), "Abel Drake's Wife," which he dramatized, was the best of his novels. His daspher, Mrs. Katherine Saunders Cooper, was author of "Gideon's Rock" and other novels.

describer, Mrs. Katherine Saunders Cooper, was author a "Gideon's Rock" and other novels.

Brety, Sir William Borrell, an English surgeon, born in 1832; died in London, March 4, 1895. He was connected throughout his professional life with St. Bartholomew's Hospital. He entered the College of Sergeons in 1847, gained the medical scholarship of London University in 1848, became a fellow of the College of Surgeons in 1852, and devoted himself to compery. For some time he was Professor of Comperative Anatomy and Physiology, and for several successive years he was President of the College of Surgeons. His skill in surgical manipulation was function. He was made a baronet in 1890. He wrote a book called "Life and Death."

Thing, Sir George, an English artist, born in London in 1820; died there April 19, 1895. He was the sen of a Bavarian artist settled in London, and after going through the University College school studied art at the Royal Academy and began to illustrate backs. He went to Lycia with Sir Charles Fellows to draw the illustrations for his book, made a success in 1847 with his designs for Macaulay's "Lays," and produced fine drawings for Milman's edition of learned (1849) and for Smith's "Dictionary of Antiquities." He lectured at the Royal Institution on assists art, and was made director of the National Portrait Gallery, established in 1857. That great collection was made by him, and when he retired in 1856 he was knighted.

Bahnak, Karl Emanuel, ex-President of the Swisa Confederation, born in Bern in 1823; died there July 18, 1895. He was educated as a Protestant minister, was chaplain to the Bern Battalion in 1847 during the campaign against the Sonderbund, and afterward pastor of a church at Scherpfen. Having won a high reputation as a Radical orator in the agitation against the Jasuita, he was in 1855 elected a member of the Government by the Great Council of Bern, and from that time took a prominent part in Swiss public affairs. He represented the canton of Bern in the Council of State from 1857 till 1865, was Vice-President of the Federal Council in 1865, and was President of the Confederation in 1865, 1871, 1874, 1878, 1885, and 1893. At the time of his death, which resulted from a carriage accident, he was chief of the Department of the Interior.

lemetas, Charles, a French philosopher, bern in Lamanne in January, 1815; died there Jan. 22, 1898, the became Professor of Philosophy at the University of Lausanne in 1838, and left it in 1840 to teach in the academy of Neuchatel, but returned to his old post

in 1866. In his philosophical works be embrato harmonize reason and recigion, amplication moral conscience as intustive the whole in a cial ethics and politice, with strong sympathic to the common people, showing a termenty is varisocialism. The Darwinian theory he accepted anreconciled it with theology His philosophy was expounded in "Philosophic de la Laterie" "he cherches do la Methode," and "ha Kanson et la Christianisme." A later work is "La t validation et les Croyanees." He wide also an exposition of the philosophy of Leibnitz, a critical disquisition on Cousin's philosophical method, and a work andiched "L'Idée, L'Histoire."

Beebohn, Henry, an English naturalist, been in Braidford, Yorkahire, about 1885; dised in Leondom, Nov. 26, 1895. He was columned at the Friends' behaved in York, and became a steel manufacturer in sheffledd. He was an enthusiastic student of crusthology, and his "History of British Birds and their Eggs" is an authority. His other works include I secundar between travels, "Siberia in Europe" 1989, and "Siberia in Asia" (1882); "The tempraphical Distribution of the Charadriids" (1888), and "The Birds of the Japaneses

Empire " (1850) Booley, Sir John Robert, an English historium, boom in London in 1834, died Jan 13, 1896. The figher was a London publisher, and the was was educated at the City of London School and at Cambridge, where he was graduated in 1857. In 1865 he became Profusor of History at Cambridge I niversity, being at that time widely known as the author of "Econ Home," a book that he never definitely acknowledged as his own. This famous work appeared in 1edd and was fiercely attacked by the evangelical party. It seduced to order the opinions of serious thinkers manipelled to revise their conceptions of threat by the progress of events, and was a stimulus to the thought of that time. He had previously published "Classical of that time. He has previously parameters—a necessary Studies: An Introductory Lecture "19815, and after the appearance of "Ecce Homas" his works in those order include "Roman Imperialisms" [1985]; "This Life and Reign of Edward I," a recusting of an earlier work entitled "The Greatest of all the Plantagements" (1872); "Lectures and Essays" | 1970 | " Late and Times of Steen "(1878); "Natural Beligion" 1009; "Ilorace Walpole and his World" edited, 1000; "The Expansion of England" (1802); "A Short Bluttry of Napoleon the First" (1806); "thur Colombal Expansion: Extracts from the Expansion of Eng-land" (1887); and "ticothe renewed after Sixty Years" (1894). His style is clear and colorious, and land" he aims to be exact, impartial, and judicious rather than brilliant or picturesque. In this respect he is the exact opposite of his contemporary Fronts. There are indications here and there that this a conductor of ornament and picture-queness was not the result of a lack of power in that direction, but came from his earnest desire to preserve the truth of history. The influence he exerted as a theological was for sourching and is shown in much of the broughth and telegrature of the Church of England me w

Sharpe, John an English clergyman, horn in 1848; died at Eimiley Levett, Dreatwich, Wescustanshire, Dec. 7, 1865. He was graduated at Cambridge in 1869, ordained in 1821, and for tan vasce hald the living of Gaseing in Norfillk. In 1860 he business runter of Elmiley Levett. He published "Mussh: A New Translation with Notes", 1876; "Notes and Dissertations on the Prophecy of Boson" (1866), and "The Tree of Life." He was a hiblinal schedul of conservative views, and was very strongly opposed to the mediern school of higher criticipus.

the modern school of higher criticism.

Rime, James, a Scottleh writer, died in London,
March 11, 1895. He was for many years the finency
advisor of the Mesers. Macmillan, and was the suther
of "A History of Germany" (1874); "Lessing"
(1877); "Deuteronomy, the Propleh Book Its for
gin and Nature" (1871); "Schiller" (1892). "The
Kingdom of All Israel; Its History, Literature and
Worship" (1883); and "Life of Goethe" (1883).

Smith George, an English reformer, born in Tunstall, Staffordshire, in February, 1831; died near Rug-by, June 21, 1835. He was the son of a brickmaker, and was put to work in the brickyards at the age of Two years later he was working thirteen hours daily, carrying heavy weights on his head almost contingonaly. He secured an education with difficulty, and before he was thirty spoke and wrote in regard to the urgent necessity for legislation in behalf of the brickmakers. As the direct result of his efforts, an act of Parliament was passed in 1871 providing for Government inspection of brickyards and regulation of labor in them. He next turned his at-tention to the deplorable condition of life on the canais, and stated in the " Fortnightly Review," in 1873. that of loo,000 men, women, and children employed on the rivers and canals of the kingdom, 95 per cent. drunkards. After several years of persistent agita-tion the canal-bills act was by his influence intro-duced into Parliament in 1877 and became a law Jan 1, 1878. The last sixteen years of his life were spent in the endeavor to bring gypsy children within the scope of the education acts. Mr. Smith was the the scope of the education acts. Mr. Smith was the author of "The Cry of the Children from the Brick-yards of England," "Our Canal Population," "Canal Adventures by Moonlight," " Gypsy Life," and "I've

been A-gypsying."

Spender, Mrs. Lilian (Hendland), an English novelist, born in London in 1838; died in Bath, Somerset, May 4, 1895. She was the daughter of Edward Hendland, a London physician, and at twenty married John Kent Spender, a physician of Bath. She began to contribute to periodicals before her marriage, and throughout her life was active in promoting the movement for a wider range of work for women. Her first novel, "Brothers-in-law," was published in 1869. Later ones were: "Her Own Fault" (1871); "Parted Lives" (1873); "Joeelyn's Mistake" (1874); "Mrx Evlmer's Revenge" (1876); "Both in the Wrong" (1878); "Till Death do us Part" (1881); "Mr. Nobody" (1884); "Recollections of a Country Doctor" (1885); "Kept Secret" (1889); Awakening" (1892); and "No Humdrum Life for me" (1893). She was the mother of 8 children, and her 4 sons were educated at Oxford and Cambridge on

the receipts from their mother's books.

Stambuloff, Stefan, a Bulgarian statesman, born in Tirnova in 1855; died in Sofia, July 18, 1895. When several Bulgarian youth were selected to be educated in Russia at the expense of the Russian Govern-

me tho pla sev log Od bib ism ism ism He not der am plii was Kri of wh Bul tool

ment he was one of those chosen, and was placed at the age of seventeen in the theological seminary at Odessa, where he imbibed more of nihilism and republicanism than of theology. He was a bright, but not a plodding stu-dent, nor was he amenable to discipline, and at length he was expelled. Then Krivtsoff, the agent of the Slav Society, who looked after the Bulgarian students, took him into his law office as a clerk, but

began he enlisted in the Russian army. When Bulgarian independence was at length established, he opened a law office in Rustchuk, and obtained a little practice. As one of the chiefs of the party that drew up the democratic Constitution of Tirnova, he was elected to represent that Radical stronghold in the Sobranje. Prince Alexander, neglecting the Liberals, who represented the sentiments of the nation, selected his ministry from the small Conservative party, and dissolved the Sobranje when it passed a vote of censure against the ministers. Stambuloff attached himself to Zankoff, but descried that politician on account of his intrigues with the Russians, and became himself the chief of the Radical wing of the Liberal party. His influence in the country was strengthened by his remarkable disinclination to accept office. In the summer of 1884 he used his influence to effect the overthrow of Zankoff, and he was chosen president of the Sobranje that was elected to sustain the second Karaveloff Cabinet. The revolution of Philippopolis, which brought about the union of Bulgaria and Eastern Roumelia, was accomplished at Stambuloff's instigation by his intimate friend Stoyanoff. When Prince Alexander was abducted, in August, 1886, Stambuloff, as president of the Sobranje, issued a proclamation from Timova denouncing as traitors the members of Zankoff's Provisional Government, and appointing Col. Mutkurof, his brother-in-law, commander in chief of the Bulgarian army. His partisans throughout the country seized the telegraph stations, and the loyal part of the army acted promptly on his suggestions, with the re-sult that the Provisional Government collapsed in three days, and he appointed, in the Prince's name, a Cabinet of which Radoslavoff was the head. He welcomed the Prince at Rustchuk, but acquiesced in Comed the Fines at Augustian the Line at this final abdication, being impelled to give up the Prince by a threatening telegram from the Czzr. When Alexander departed he committed the powers When Alexander departed he committed the powers of the throne to a council of regents, of which Stambuloff was the head and Karaveloff and Mutkuroff the other members. The first regent soon concentrated all power in his own hands by discarding Karaveloff, who was replaced by Jivkoff, an intimate friend of Stambuloff. The Czar, who had promised not to interfere except in case of anarchy, did not think it possible for Bulgaria to exist under an anti-Russian régime, and it was long before he appreciated the strength of the spirit of independence and the amazing energy and resourcefulness of Stambuloff, who, with the support of England and the sympathy of Europe, foiled every effort of the Russians to over-turn him. When he procured the election of Prince Ferdinand by the Grod Sobranje, July 4, 1887, he did not lay down his powers, but as Prime Minister imposed his will upon the new Prince. Stambuloff sup-pressed the plot of Major Panitza and other attempted risings with cruel severity, and made many mortal enemies; but his tyrannical rule was not resented by the people, who were not overtaxed and who propered under the conditions of quiet and order en-forced by Stambuloff. After some of the leaders of the Opposition had been shot, imprisoned, or driven into exile, the rest were so terrified that few candidates appeared to contest the election of 1890 agains the Government. Not only the British and the Autrian governments, but Austria's partners in the triple alliance were won over by Stambuloff's success in preserving order. In 1891 the Prime Minister of History o narrowly escaped assassination, the Minister of Finance being struck down in mistake. His acts of vengeance against all rivals and antagonists so multiplied his enemies that he began to grow unpopular. He sacrificed in a measure his reputation for patrio-ism by changing the Constitution so as to allow the heir to the throne to be baptized as a Roman Catholic. On seeing his position weakened, the ungrateful Prince turned upon him and began to rebel against the dictation of his autocratic Prime Minister. Ferdinand hoped that if Stambuloff would step saide he could become reconciled to the Czar and recognized

the legitimate Prince. On May 29, 1894, Stambuloff atonished the world by voluntarily resigning his offer. The Prince publicly professed gratitude to the retiring president of the Council, but before long the was counted among the enemies of the fallen dictions, who were now bold and flerce enough. Stambuloff had friends, too, many and influential, but the ethorities would not protect him, and he knew that he would be assassinated. When his request to be allowed to go to a foreign watering place was denied, he saw that he was doomed. He even knew who were to be his murderers, yet with his wonted fortitude he calculy awaited his fate. At last, when returning in the creaing from his club, he was set upon and mortally abbed and shot by 4 men, whose escape the police fellitated, while they arrested Stambuloff's friends and servants. Even at his grave a demonstration of bard was made by some army officers. His slayers were the averagers of persons whom Stambuloff had

cassed to death by judicial process.

Baylak, Surjus Michael Dragonanoff, a Russian author and revolutionist, born in Hajatsch, in the Ukraina, in 1841; died in London, England, Dec. 23, 184. He was descended from a family of Cossack rigin belonging to the minor nobility in the government of Poltowa. While a student at Kieff, between 1850 and 1863, he published books in the Little Russian dialect, the circulation of which was prohibited by the Russian Government in 1862 on account of the political tendency. He became a tutor of ancient history in the University of Kieff in 1865, and a necessor in 1870, but was removed from his chair in 1874, and in 1876, in consequence of strictures on the authors in 1876, in consequence of strictures on the methods of justice permitted under Count Tolstoi, the Minister of Justice, he was compelled to flee to come deportation. Settling in Geneva, he produced works in the Little Russian dialect that made a stir is Russia, and in 1877 began a series of reviews under the title "Hromada." While not accepting socialism, he assailed the autocratic system and advocated equal rights for all Russians. Removing to Incland, he wrote newspaper and magazine articles to books in the English language. His principal works are: "The Turks within and without": "Tyrunnicide in Russian Internationalism," "The Turks within and without": "Tyrunnicide in Russian Internationalism," "The Turks within and without": "Tyrunnicide in Russian Internationalism," "The Turks within and without": "Tyrunnicide in Russian Internationalism," "The Turks within and without": "Tyrunnicide in Russian Internationalism," "The Turks within and without": "Tyrunnicide in Russian Internationalism," "The Turks within and without": "Tyrunnicide in Russian Internationalism," and the Muscovite Democracy," besides his monographs on the ethnography, history, and literature of the Russia. With M. Antonovich he collected and didd Little Russian folk songs.

Britanie Russian folk songs.

by the bound of the English historian, born in Bertish Museum on the Arundel manuscripts; worked at Glasgow and Durham Universities; worked in the British Museum on the Arundel manuscripts; maged the chapter records of Durham Cathedral; resolved the degree of M. A. for this work; and was evidenced by the bishop, though he had previously unimplated entering the Presbyterian ministry. He continued his literary work, however, editing Busher's "Glossary of Archaic and Provincial Worde"; "Latin Hymns of the Anglo-Saxon Church"; "The Lindisfarne and Rushworth Gospie"; "Chronicles of Melrose and Lancrost," and the Roxburghe Clubs and the English Historical Society. From 1849 till 1862 he was Vicar of Leighton Busher's "House of the Historians of England" (1853 of Chronicon Monasterii de Abington"; "Letters and Published "Church Historians of England" (1853 of Chronicon Monasterii de Abington"; "Letters and Published "Church Historians of England" (1853 of Chronicon of the English in Plance, temp. Henry VI"; and "Narratives of the English in Plance, temp. Henry VI"; and "Narratives of the English in the Record Office and issued a "Calendar of State Papers of the Reign of Elizabeth," followed by "Documents illustrative of the History of Societiand, 1986-1306," At the age of sixty-three, on his wife's death, he entered St. Mary's College, Asset, as a sudent and a lecturer, and at the same time "as

employed by the Historical Manuschild solution to examine collections of manuschild we representations and private families. He was the respectations and private families. He was the respective to the historic manuschild described from the length to return to character to archives of the Vatican in search of documents for trative of British history. On his return to English in 1977, he entered the movitants of the thousand of Jesus at Bochampton, and when his period of published was ended he engaged in missionary salars and resumed his literary activity. He contributed the "Month" and other periodicals, added has a "History of Mary Stears" (1981, and published "The Fixed Years of the Life of Mary Stears" (1981, and published The Years of the Life of Mary Stears" (1981, and published manyeness.

Bapph. Prans vol. Mary Schmart. There.

Bapph. Prans vol. an Austrian mounted compresses born in Spalato, Dalmatra, April 26, 1920; died in Vienna, May 21, 1805. His family, originally from Belgium, had for two generations been settled in Cremona, Italy. His early predictency with the flate and other instruments, his interviousne with Danal acti, who was his uncle, and his otrong love of antono-impelled him to adopt a musical carver. He had received some training at the Vienna Consustration and had begun to compose operation, and at fifteen quartettes, etc., at the age of fourteen, and at fifteen produced a mass of his own in the church at East. After a thorough course at the musical acudemy, and after receiving valuable instruction from Dominetti, he was appointed, at the age of twenty one, Prefessor of Harmony in the academy and engaged as rest-ductor of the orchestra of the Josephistast Themses He was afterward conductor at Presburg, but went back to Vienna in 1846. He composed the music fire 2 grand operas and for 145 musical farces and washed required, symphomics, or entiates, and other concert pieces, of which the most success until he previdend the specular Fishmitza. In 1876, which was followed in 1873 by "Boccaccio." His other basic-known works at mitza" in 1876, which was followed in 1873 by "Zehn Madchen und kein Mann", "Fistes Biosche"; "Die Schöne Galathen", "Leisthte Kaval lerie"; "Die Schöne Galathen Mann", "Fistes Biosche"; "Die Schöne Galathen", "Leisthte Kaval lerie"; "Die Schöne Galathen Mann", "Fistes Biosche"; "Die Schöne Galathen Mann", "Fistes Biosche"; "Die Schöne Galathen Mann", "Fistes Bioschen"; "Die Schöne Galathen Mann", "Fistes Bioschen"; "Die Schöne Galathen Mann", "Fistes Bioschen"; "Die Schöne Galathen Mann", "Fistes Bioschen "; "Die Schöne Galathen Mann", "Fistes Bioschen "; "Die Schöne Galathen ", "Leisthte Kaval lerie "; "Die Schöne Gala

1895. He was the oldest son of a Prisonan pures, who was emposted in 1831. After a convenedal course at the gymnasium of his native city, where he showed his preference for history, especially for Nachada's classical Roman history and Edmand Burke's works. he went to the University of Bertin as a pagel of Leopold von Ranke and of Savigny, with whose he studied history and law from 1854 to 1859. Ranke had just founded the first of those historical series naries which are the pro-le of the terrmine anniverse ties as temples of original research. In 1858 Sybul was graduated as a distor with the theens " I've finds bus libri Jordanis de origene actuque pessarum," a sagacious investigation of the sources of the groun historian of the tioths. In less he became a private tutor at the University of Home, and one year later he published his "tienchichte der cesten Leuranges (Dissellers, several of time, 1641, in which he de strived the legend of l'eter the Harmit as the origin native, and traffers of Boundism so the leader of the first crueade. He was appeared professors extraordinary in 1844, and published " Entertaining des dent when Kongtums" second edition, 1991, the comwhen Kongtums served edition, 1941, the cur-lusters of which were strongly attached by timery Waits and Felix Bahn, the two greatest authorities on that subject. In the same year habel wrete, with the translated tellifementary, "The Unerchibeted des heel gen Back to in Trier," a polemie against the eler real party and the pilgriousges to the holy cout in Truce. The next year he was called to a full per-fectively in Marburg and elected to the Diet of the Hermian Continue, and in 1830 also to the unqueral list at Esfurt. By a special effort of King Mexical Bararia, he was called to the I'm term " Munich, where he seem became a member of the to a

He founded the first historical emy of Sciences. enumary in Munich; organized with Ranke the Historical Commission of the Bavarian Academy, whose first secretary he became and later its president; caused the publication of the German records of the diets; and founded in 1859 the "Historische Zeitschrift." But political differences induced him to resum in 1861 and return to Bonn as Dahlmann's succasor. He became a member of the Prussian House of Representatives at the time of the constitutional conflict between the Government and the Parliament on the question of the reorganization of the Prussian army, for which the House declined to make appropriations. Sybel joined the anti-Bismarekian party; but, fortunately for his future, he was obliged, on account of an eye disease, to leave the House in 1864. Meanwhile he published "Die deutsche Nation und das Kaiserreich" (Dusseldorf, 1862), sharply criticising the nebulous policy of the empire during the Miding the neutrous policy of the empire during the Aide Ages. During his Bonn career he also published "Kleine hist, Schriften" (3 volumes, Munich, 1863-1891; "Vorträge u. Aufsätze" (Berlin, 1874); "Klerikale Politik im 19. Jahrhundert" (Bonn, 1874). But the work that established his world-wide fame is the "Geschichte der Revolutionszeit von 1789-1800," in 5 volumes, which he had begun during the storm and stress period of 1848 (1853-'80). In this work he has shown that the great revolution was one single process of disintegration in the destruction of Capetingian France and the degenerate holy Roman Empire and the partition of Poland. The entire work was based upon the hidden sources collected in the archives of the principal capitals of Europe. In the spring of 1867 he was elected a member of the Constitutional Diet of the North German Confederation, and joined the Moderate National-Liberal party. After his resignation he founded in Bonn the "Deutscher Verein der Rheinprovinz," the principal instrument against the Ultramontane party. In 1874 he was elected a representative for Magdeburg, and in 1876 and 1879 was re-elected. The year 1875 marks the most important epoch in his life, when he was called by Emperor William I to be director of the Prussian state archives and the Berlin secret archives as well as of the " Acta Borussica," the chief source of the history of Prussian administration in the eighteenth century. In this capacity, and as a member of the Berlin Acadenty of Sciences, he began the publication of the archive documents in 1878, and 62 volumes of the most unique and valuable historical matter have appeared. At the same time he began by order of the academy, together with Max Duncker, an edition of the political correspondence of Frederick the Great. He was also a member of the Central Commission of the "Monumenta Germanise historica." In 1881 Prince Bismarck authorized Sybel to use the Prussian archives in preparing the newest history of Prussia and Germany. As the fruit of these researches arme Sybel's monumental work, "Begründung des deatschen Beiches durch Wilhelm I," the first vol-tome of which appeared in 1889, and Vols. VI and VII. comprising the history of the North German deleration and the origin of the war of 1870, at the case of 1834. It is unsurpassed in the art of realing dimension negotiations, and is thoroughly the said yet it shows rare moleration and jus-let use the commiss. With this work, which was Lanc I be traveled to Marburg, where Wome writing a letter to a French ", no the stack of the Franco-Prusas miles in paralysis of the lungs, like y syled was the most exman to star abort, to glaming in the forties of this war of the state of the st describing at the state of the

co-operation in the common patriotic work of founding the empire."

Taaffe, Graf Eduard, an Austrian statesman, born in Vienna, Feb. 24, 1833; died in Ellischau, Nov. 29, 1895. In his childhood he was the companion of the Archduke Franz Josef, who became Emperor. He entered the public service in 1852, and rose rapidly, becoming Governor of Salzburg in 1863 and Stadihalter of Upper Austria in 1867. In the same year he entered the Austrian ministry under Graf Beust as Minister of the Interior. When the Bürgerministerium was formed, Dec. 30, 1867, he received the portfolio of National Defense, and when Prince Auer sperg retired he took provisionally the presidency of the Council. When the Hohenwart ministry came in, Taaffe was appointed Governor of the Tyrol, and after filling that office for eight years he was called into the Stremayr Cabinet as Minister of the Interior in February, 1879, and in the following August he formed a new Cabinet, in which, in addition to the presidency, he took the portfolio of the Interior. The Taaffe regime was characterized by the disap The Tauffe régime was characterized by the disappearance of the constitutional theories and the growth of federalism. He was originally an adherent of the Constitutional group, but was gradually alienated from the German Liberals. He had finally to rely upon the support of the Clerical Feudalists, the Czechs, and the Poles, in carrying out his policy of conciliation. The rise of the young Czechs and their constitution and the constitution of extreme demands, which imperiled the Constitution, led him to seek a new alliance with the German Liberals; but they rejected his overtures, and voted with the Feudalists and the Poles against his bill for the extension of the franchise, upon the rejection of which he resigned, Nov. 23, 1893.

Tauchnita, Baron Christian Bernhard, a German publisher, born in Schleinitz, near Naumburg, in 1816; died in Leipzig, Aug. 14, 1895. He was trained in the establishment of his uncle, the publisher of cheap editions of the classics, and in 1837 set up a printing establishment of his own, printed books for other publishers, and did the public printing for the Saxon Government. He began in 1841 the collection of British authors, which finally embraced 3,000 volumes, and subsequently issued books for the young, French classics, collections of German authors, editions of the Greek and Roman classics, handbooks of logarithms, legal and theological works, editions of the Bible, and dictionaries and manuals of conversation. In 1843 Bernhard Tauchnitz began to enter into arrangements with English authors, whereby he paid them an honorarium and obtained the exclusive authorization to print their books on the Continent, but agreed not to import his editions into England or her colonies, nor to hinder the sale of original English editions on the Continent. After the first international copyright treaty was made between England and the Prussian and Saxon governments, in 1846, his editions were protected by law. He was ennoble by the Duke of Coburg in 1877, and was a member of the Upper Chamber of the Saxon Diet.

Thomson, Joseph, a Scottish traveler, born in Penpont, Dumfriesshire, Feb. 2, 1858; died in York Gate, Aug. 2, 1895. He studied geology at Edinburgh under Sir Archibald Geikie, and at twenty joined Keith Johnson's African expedition. Owing to the death of its leader, Mr. Thomson became the head of the expedition, and the results of this journey appear in his book "To the Central African Lakes and back" (1881). He was at once ranked among the foremost of African explorers, and in 1883 headed an expedition to Masailand. In 1885 he went to Sokoto in behalf of the Royal Niger Company, and his efforts secured the Central Soudan to Great Britain. In 1885 he explored the region of the Atlas mountains in Morocco, and in 1891 the region between Lakes Nyssea and Bangweolo, from which he returned with shattered health. He was a man of great energy and daring as well as a most entertaining writer, and in his journeys was able to avoid all serious conflict with the natives. He was the author of "Through Masai

Land" (1885); "Ulu: An African Romance," with Miss H. Smith (1888); "Travels in the Atlas and Southern Morocco" (1889); and "Life of Mungo

Park " (1650).

nyeroft, Mary, an English artist, born in Thorn-Norfolk, about 1812; died in London, Feb. 1, She learned sculpture under the instruction of or father, John Francis, married Thomas Thorny the a fellow-pupil, and went with him to study in me, after exhibiting several works in the Royal

Academy. Her most famous work in the Eoyal Academy. Her most famous work is the "Girlakip-ing," shown at the Paris Exposition of 1855. Threld, Anthony Wilson, an English prelate, born in Housham, Lincolnshire, June 13, 1825; died in Farn-sam Castle, Surrey, July 2, 1895. He was the younger on of the Rev. Edward Thorold, vicar of Hougham--Marston, and was educated at Oxford. His first normal charge was that of St. Giles-in-the-Fields, and on, where he remained from 1857 to 1867. In 186 he was minister of Curzon Chapel, Mayfair, and is next year he became vicar of St. Pancras, London, wast parish including congregations of the very rich and the very poor. He was made canon residentiary (York in 1874, and in 1877 was appointed lishop of the bester. In 1891 he was translated to the see of Winchester, in which he had the oversight of 552 shes and more than 800 clergy. He fixed his parishes and more than 800 ciergy, a great his-science at Farnham Castle, Surrey, a great his-scie pile much out of repair, but which, from his crie pile much out of repair, but which, from his resources, he did a great deal to restore and m. Bishop Thorold was a frequent visitor to the led States. He was a tireless worker, and possessed United States. at powers of endurance. He was a total abstainer conviction, and wrote and spoke frequently in lefense of his position. In his earlier career he was Low-churchman, and his evangelical habit of thought was never greatly changed. He contributed frequently to periodicals, and his writings in magazines and in book form were very popular. His pubfrequently to periodicals, and his writings in maga-ines and in book form were very popular. His pub-lished volumes include: "On being Illi" (1865); "The Presence of Christ" (1869); "Parochial Mis-sions" (1873); "The Gospel of Christ" (1881); "The Claim of Christ on the Young" (1882); "The Yoke of Christ" (1883); "Questions of Faith" (1892); and "The Tenderness of Christ" (1894). Telmia, Osmilla, an English author, born in 1812; died in Dulwich, Feb. 16, 1895. She began early to write for the magazines, being thrown upon her own resources by the death of her father, who was a so-

sources by the death of her father, who was a so-citor. She was editor of the "Ladies' Companion" ad of the "Monthly Magazine" for some years. In 1848 ahe married Newton Crosland, a London mernt. Most of her subsequent writings pictured the chant. Most of her subsequent writings pictures and trials and hardships of the poor, and the political and social life of the people. Her books include: "Lays and Legends of English Life"; "Partners for Life"; "Stratagems"; "Lydia: A Woman's Book"; and "Landmarks of a Literary Life" (1894).

Trelet, Karis, a Swiss author, born in Vaud in 31; died near St. Maurice at the end of July, 1895. She was the daughter of a Protestant paster, and late in life embraced the Roman faith. She wrote under pen name "Mario," and attained auccess with a ook of "Pictures from Palestine." Of a more endur-ag reputation are "Un vieux Pays," her "Silhouettes Imandes," and her collection of the City ides," and her collection of the folklore of Va-

leis. Her last book was "Edelweiss" (1894.

Tyrwhitt, Richard St. John, an English clergyman and author, born about 1828; died in Oxford, Dec. 6, 1898. He was graduated at Oxford in 1849, and ordained two years later. He became vicar of St. Mary Macdalen, Oxford, in 1858, and held that living until 1889, and held that living until 1889, and held that living until 1889, and held the living until 1889, and held t 1872, after which he devoted himself to literature and His published works include: "Clerical Powers and Duties" (1861); "Schooling of Life" 1864; "Handbook of Pictorial Art" (1868); "Christian Art and Symbolism" (1872); "Our Sketching (lub. 1 etand symbolism" (1872); "Our Sketching Clute. Teers and Studies on Landscape Art" (1874). "The Art Teaching of the Primitive Church" (1874). "Hugh Heron, Christ. Church: An Oxford Novel" (1880); "Greek and Gothie" (1881); "Natural Theology of Natural Beauty " 1982 and Hopes " 1984 " Free Free 1 . . . -1-11 to 011 1 Venables Edward on Logical artificing to

A year later he was called to the breame one of the leaders of the material star a burn of throught, and published many works, several forty polesmonal. He also took an active part or the pulsar

affairs of his adopted country, and was elected to the National and to the Federal Council. Of his pubhalled works, the one that made the most stir was "Serence and Superstition," a ficree polemic against the interiord on of religious authority as a criterion of a antile trath this " Investigations into Animal Campounties", sa caustic safire on the political and serial left is a mesiern civilization. Another contreverseal wark was "Man and his Place in the Creation and the History of the Earth." He wrote also a great work on the "Manumifers," and a widely read emparative Anatomy

Wade Ser Thomas Francis, an English scholar, born in 1812, died in Cambridge, July 31, 1895. He was edu ated at Harrow, and entered the army in 1838. A residence of forty years in China, together with his eminent abulity, made him a high authority on Chiness topics, and his services in the negotiation of treates were of great assistance to the furtherance of Luglish trade in the East. He became minister to theirs and chief superintendent of British trade in 1-71, and retired on a pension in 1883. In 1888 the was appointed first Professor of Chinese at Cam-

Warren, John Byrne Leicester, Baron de Tabley, an English pact, born at Tabley House, Knutsford, Cheshire, April 25, 1835; died Nov. 22, 1895. He was educated at Eton and Oxford, and succeeded has father as the third Baron de Tabley in 1887. He was one of the most learned of English poets, but was sensitive and diffident. His writings were by no means so widely known as they deserved to be, but the circle of readers to whom his name was familiar estcemed him as a genuine poet. Perhaps his highest attainment is reached in the serious dramas "Orestes" and "Philoctetes," but all his work reveals, thorough classical sympathies, a delicate, refined teste and great wealth of imagery. His first book, published under the pseudonym John P. Laneas-ter, was "Praeterita" (1863). His subsequent works ter, was "Praterita" (1863). His subsequent works include; "Ecloques and Monodramas" (1864); "Studies in Verse" (1865); "Philocetees" (1866); "Orestees" (1867); "A Screw Loose; A Novel" (1868); "Bopes of Sand: A Novel" (1870); "Rehearsals; A Book of Verse" (1870); "Searching the Net: A Book of Verses" (1873); "The Soldier of Fortune: A Tragedy" (1876); "Study of Book Plates" (1880); "Poems: Dramatic and Lyrical" (2d series, 1895). Williaman William Orayford an English naturalist.

Williamson, William Crawford, an English naturalist, born in Scarborough, Nov. 24, 1816; died in Clap-barn, June 23, 1895. His first scientific monograph was published when he was but eighteen. He practrees medicine for many years at Manchester, but during his whole career was constantly engaged in smentific pursuits. Between 1845 and 1847 he published a netable series of papers on the development of fishes' teeth and scales. His most important investogat sus in later years related to the structure of fossuperity has Organization of the Fossil Plants of the total Measures Taking high rank as an authority. It am Professor of Natural History and Geology and Codege in 1850, and held the chair of Bot-

west Charles a French dressmaker, born in Bourne, to the Lagrand, in 1825; died in Paris, March father a whelter, who had become imspendation, apprenticed him at the branch of making up branch of making up referred to a partnership, he series in the Rue de la M. Dingh, a Swede, for his value of his custom, and w . 15-7 Figure, and when 120 1001 of tells the agency of the second sec

adopted, such as the walking dress with short skirt

and jacket of the same material.

Zorilla. Manuel Ruis, a Spanish politician, born in Madrid in 1834; died in Burgos, June 13, 1895. He studied and practiced haw in Madrid, and at the age of twenty-two was elected to the Cortes. Very soon he won reputation as an earnest and eloquent champion of the Liberal cause, but in 1860 he was driven into exile, having taken part in the insurrection against Isabella. When the Bourbon throne was overturned in 1868, he returned and presided over the Parliament that offered the crown to the Duke of Aosta in 1870. When Amadeo mounted the throne he made Zorilla his Prime Minister. The King of Italy conferred upon him the order of the Annunziata. thaty conterred upon min the order to usually reserved for royalty. Zorilla earned the grattude and admiration of the Spanish people by enlarge ing their liberties and introducing sweeping political reforms; but the development of his plans was inter-rupted when Amadeo, after a troubled reign of three years, abdicated and went to Portugal, accompanied by the Prime Minister, who, however, soon returned to Spain and embraced republicanism. He sometimes took a conspicuous part in affairs during the interregnum, and became a thoroughgoing republican and a leader of the advanced section of the party. When the Bourbons were restored in 1875 in the person of Alfonso XII, he was sent into exile a second time. He took up his residence in Paris first, and afterward lived in England and Switzerland, and sometimes in the south of France, whence he could communicate easily with his partisans in Spain. He returned to Spain only a few months before he died, renouncing, on account of failing health, any further participation in politics. While Castelar and others renounced violence or accepted the monarchy Zorilla remained a revolutionary republican and schemed and plotted against the monarchy.

OHIO, a Central Western State, admitted to the Union in 1803; population, according to last census (1890), 3,666,719, it being fourth in rank of the States; area, according to the United States Geological Survey, 41,060 square miles, of which 40,760 is land surface and 300 water

of which 40,760 is land surface and 300 water surface. Capital, Columbus.

Government.—The State officers during 1895 were: Governor, William McKinley, Republican; Lieutenant Governor, Andrew L. Harris; Secretary of State, Samuel L. Taylor; Auditor, Ebenezer W. Poe; Treasurer, William T. Cope; Board of Public Works, Frank J. McCulloch, Charles E. Groce, Edwin Lybarger; Commissioner of Common Schools, Oscar T. Corson; Judges of the Supreme Court, Franklin J. Dick-Judges of the Supreme Court, Franklin J. Dickman until February 9, Thaddeus A. Minshall, Marshall J. Williams, Jacob F. Burkett, William T. Spear, Joseph P. Bradbury, John A. Shauck from Feb. 9; Clerk of the Supreme Court, Josiah B. Allen; Dairy and Food Commissioner, Frederick B. McNeal.

Finances.—The receipts for the fiscal year 1895, including balance from 1894, were \$3,443,-383.94, which were used by the following departments and institutions: Board of Public Works, \$105,337.70; Soldiers' and Sailors' Home, from United States, \$92,181,41; Dairy and Food Commissioner, from fines, \$18,403.37; Commissioner of Railroads and Telegraphs. from railroad companies, \$15,355.33; Inspector of Mines, from fines, \$5; total receipts for special purposes, \$231,282.81; grand total for all purposes, including balance, \$4,029,394.60; total disbursements for year ending Nov. 15, 1895, \$3,795,721.22; balance in treasury Nov. 16, 1895,

\$233.673.38.

The public funded debt of the State in January, 1892, was \$2,295,665, bearing 3 per cent. interest. The debt on Nov. 15, 1895, was \$1,791. This sum includes \$500,000 of a loan by certificate of indebtedness payable July 1, 1896, also bearing 3 per cent. interest, which was authorized by the seventy-first General Assembly. There has been paid on the public debt of the State \$1,000,000 in the past four years. The entire funded debt of the State will be extin-

guished on July 1, 1900, Education.—The value of the school property of the State is more than \$40,000,000. school enumeration in 1895 was 1,159,258, number of teachers employed during the whole of the school year was 17,820. The number of pupils in attendance was \$17,490. The average daily attendance was 593,465. The amount paid teachers was \$7,907,860.71. The number of new schoolhouses erected was 275, at a cost of \$1,-246,376. During the year the amount received for school purposes from taxation was \$11,422,-551.81; from irreducible school fund and other State school property, \$251,569.06; and from other sources, sales of bonds, etc., \$2,058,981.35; making a total of \$13,733,102.22.

Lynching.-Two cases of attempted lynching occurred in the State during the year, and in both instances the troops were called out to support the law and protect the prisoners in jail against the mob. In Seneca County 2 men were killed before the troops arrived. In Fayette County the troops were acting under orders of the sheriff when the mob assailed the jail. The troops fired, and several persons were killed. In both cases the prisoners were protected and the lynchers driven off. The colonel in charge of the troops was indicted and tried for the killing, but was acquitted on the ground that he

was performing his duty.

Ining.—The report of the chief mine inspector, filed in August each year, relates to the ar preceding. His report made in 1895 gives the year's production of coal as 11,910,219 tons, a heavy falling off in consequence of labor dis-putes. Of this amount, 2,555,466 tons were mined by machinery, this method being confined to 9 of the 30 coal-producing counties of the State. The number of persons employed in and about the mines was 31,493, of whom 25,163 were miners. There were 119 new mines opened during the year, 67 remained suspended, and 59 were either exhausted or abandoned. At the close of the fiscal year there were 1,163 mines in the State, of which 1,096 were in operation, which is 39 more than during 1893. Of this number, 411 employ more than 10 men, and 685 fewer. The accidents numbered 257, of which 45 were fatal. There was 1 accident for each 46,343 tons of coal mined; 264,672 tons were mined to each life lost. The iron-ore production was 58,043 tons; fire-clay, 942,913 tons.

Canal Property.—A decision by the Supreme Court, handed down in June, conclusively determines that land occupied and used by the State for canal purposes becomes the property of the State absolutely in fee. In November, 1893, the Attorney-General, acting by direction of a reserve lution of the General Assembly, instituted proceedings to oust the Pennsylvania Company from occupying with its tracks and depots the

portion of what was formers to be Eric Canal in Cincinnati, between I and v. and the Ohio river In deciding the are favor of the State, the rourt allowed the dred and twenty days for the sailwas compact to obtain from the State the right to keep a tracks and depote upon the premies it comtroversy. Before the time expired, a acttlement was effected.

Arbitration. - The State Board of Artistration, during the two and a half years of its cocial existence, has been called to deal with 29 strikes and lockouts, of which 15 have been settled wholly or partly through its agency. The board in its report called attention to an important defect in the law and suggested its amendmental. Literally interpreted, the statute now makes no provision for services of the board where a contrinciny arises between employer and employees of any firm, company, or corporation, operating in different counties, where the several employers act together on the one hand and groups of employees on the other

Military park Monuments. - The Ohio, Chickamauga, and Chattanooga National Mills tary Park Commission rendered its report to the Governor, showing the completion of its work. It erected 55 monuments to mark the places where Ohio troops fought and died on that historic field. All its liabilities were paid at the time of the report except the cost of publishing the report itself, and without this expenditure there remained a balance in the hands of the

treasurer of \$6,434.82.

Hocking Valley Sufferers, - The labor dis-putes in the Hocking Valley coal mines kept the mines idle during the greater part of 1894, caseing such distress that, in January, 1995, the miners were forced to appeal for assurtance. Gov. McKinley requested certain estice and villages to give supplies and money to relieve their needs. The response was prompt and generous. A large quantity of provisions and clothing and other needed supplies were shipped from time to time to points where destitution existed, and \$4,948.87 in money subscribed, of which about four fifths were expended. There were 2.722 families assisted. The total value of the supplies, including provisions and clothing, was estimated at \$31.785.

No Legislative Session, - For the several time in the history of the Mate there was an legislative session during the year. The first Constitution of Obio, adopted Nev 30, 1912, provided that the tieneral Assembly should " most on the first Monday of December in every year. The present Constitute or problem that "all regular seasons of the General Assembly shall commence on the first Monday of January birms This constitutional provision has been mally !

oply twice deepend

Limited Woman Suffrage,-The law passed in 1864, granting women the right to vote for school efficers and to sit on school boards, was decided to be constitutional by the circuit court of Franklin County, and subsequently by the Supreme Court, on the ground that the whole subject of the public schools is delegated to the tieneral Assembly. Women registered and voted in considerable numbers in some min pulities, and some were elected to school line was

OHIO. 624

Political. - The Republican State Convention was held in Zanesville May 28 and 29. There was a sharp contest over the nomination for Governor, 8 candidates being voted for. On the sixth ballot Asa S. Bushnell, of Springfield, a wealthy manufacturer of agricultural implements, was nominated. The significance of the nomination lay in the fact that Mr. Bushnell was the avowed choice of the friends of ex-Gov. Foraker, and was opposed by the friends of Gov. McKinley. The contest between the two factions also affected the choice for the other offices. The nominations following that for Governor were made on the second day, and were as follow: For Lieutenant Governor, Asahel W. Jones: Auditor, A. D. Guilbert; Judge of the Supreme Court, Thaddeus A. Minshall; Clerk of the Supreme Court, Josiah B. Allen; Attorney-General, Frank S. Monett; Treasurer, Samuel B. Campbell; Member of the Board of Public Works, E. L. Lybarger. The platform included these declarations:

We reaffirm our adherence to the principles of the Republican party as defined by the national convention in 1892, chief among which are: A protective tariff, reciprocity, fair elections, and honest money, consisting of gold, silver, and paper, every dollar as good as any other dollar, and all backed by the national faith and honor. We favor bimetallism and demand the use of both gold and silver as standard money, either in accordance with a ratio to be fixed by an international agreement or under such restrictions and provisions as will secure the maintenance of the parity

of values of the two metals.

We denounce the present Democratic Administration, whose vicious and vacillating course has brought us distress at home and humiliation abroad. It has inaugurated a policy looking toward ultimate free trade, which has deranged business, crippled our industries, distressed our homes, and dealt labor a serious blow. With deplorable incompetency it has failed to raise revenue enough to run the Government, and has had to borrow in less than two years \$162,089,000, mainly to pay ordinary running ex-tenses, selling in secret to favor foreign syndicates the bonds of the Government at prices far below their actual value. We denounce the present administra-tion of the Pension Bureau for its betrayal of the interests of the Union soldiers.

We indorse the able, honest, and business-like ad-ministration of Gov. William McKinley.

The election of a Republican Legislature in this State next November will enable Ohio to send to the Unital States Senate a Republican colleague to that grant old statesman John Sherman, who has so long and ably sustained the honor of Ohio as her repree matrice in that august body.

The Prohibition Convention was held in Straigfield, June 12, and the following ticket was naminated: For Governor, Seth H. Ellis; Londonath Governor, J. W. Sharp; Attorney-Ocherat, W. C. Bates; Auditor, A. S. Caton; Traspor, J. H. Hawkins; Judge of the Suprofile Court, John T. Moore; Clerk of the Su-1 to a Court, D. F. Spicer; Member of the Board of Pure W. rks, James Benjamin. A choice for United States States was expressed for R. S. The new hor Trepatform advocated

the per traffe; woman suffrage; to easily such as telegraph and rail-such as telegraph and rail-such as a such as the Government; no sail a success out of the Court P 1 1 1 1 4 that at ... the people is the restriction of the Constitution to allow that the restriction to the property and incomes of the people, unto what he time import duties should

be levied upon luxuries rather than necessaries, opposing any appropriations of public moneys for secta-rian purposes, and favoring the public schools; elec-tion of the President and other officers as far as practicable by the popular vote; proportional minority representation in State and nation. There was also reported a plank on the money question which was voted down and a substitute adopted, declaring that the money of the country should be of a full legal tender, issued directly to the people on ample security in such quantities as the people may demand and to all at uniform rate of interest. To this end the Government should establish real national banks, as it does post offices, wherever the convenience of the people demands. Until such financial system can be established we favor the free and unlimited coinage of silver and gold at the ratio of 16 to 1 as a temporary relief.

The People's party held their convention in Columbus, Aug. 2, and nominated the following ticket: For Governor, Jacob S. Coxey; Lieutenant Governor, John H. Crofton; Treasurer, George W. Harper; Auditor, Charles Bonsall; Attorney-General, William Baker (Thomas Reed Substituted on Baker's withdrawal); Supreme Judge, E. D. Stark; Member of the Board of Public Works, William A. Gloyd; Clerk of the Supreme Court, Thomas N. Hickman. The choice of the party for United States Senator was also expressed, the nominee being George A. Groot. The platform affirmed

The principles of the Omaha platform; favored Coxey's noninterest-bond and good-road bills; favored the coinage out of paper of as many dollars or units as will be sufficient to conduct the business of the as will be suincient to conduct the business of the country on a cash basis, and demanded that such money be a full legal tender; favored the free and unlimited coinage of gold and silver into dollars or units at the present legal rates without any regard whetever are to what other ratios may do; designed whatever as to what other nations may do; demanded the nationalization of all public monopolies; de-nounced as treason to the American people the issue of interest-bearing bonds at any time, either in war or peace; denounced as treason to the Constitution of the United States the subversion of the rights of trial by jury as practiced by the courts in the case of E. V. Debs; favored a law that will make unlawful any bond, note, mortgage, or other obliga-tion that is made payable in gold only, and declared that all debts, public and private, should be made payable in any lawful money of the United States at the option of the debtor; favored the immediate abolishment of the national banking system; maintained that Congress should pass the per diem service act demanded by the Grand Army of the Republic, and Congress should provide for the payment to the Union soldiers of the war of 1861 to 1865 such sum as will make their pay equal to coin with interest thereon. It also favored direct legislation by the initiative and referendum in national, State, and local government, the imperative mandate and proportionate representation; the election of all offices in the State and nation by direct vote of the people; eight hours' work and the union label; State control of the liquor traffic without profit.

The Democratic State Convention was held in Springfield, Aug. 21, when the following nominations were made: For Governor, James E. Campbell: Lieutenant Governor, John B. Peas-lee; Auditor, James A. Knott: Treasurer, William B. Shober; Judge of the Supreme Court, William T. Mooney; Attorney-General, George A. Fairbanks; Member of the Board of Public Works, J. W. Cruikshank (Harry B. Keffer substituted on Cruikshank's withdrawal). The nomination for Governor was made by acclamation, there being no other candidate named. The platform included the following declarations:

When we consider the fact that the Democratic reviewed from the Republicans in 1892 a bank. Treasury, that it inherited from them the vicious received and tariff laws which had prepared and fully produced the panic of 1893, we insist that it is settled to the thanks of the people for the courage which it has attacked and repealed these laws. We hold to the use of both gold and silver as the modern money of the course whether the course of both

We hold to the use of both gold and silver as the maint money of the country and to coin of both pld and silver, without discriminating against either all or charge of mintage; but the dollar unit of charge of both metals must be of equal intrinsic and thougable value, or be adjusted by international accessor, or by such safeguards of legislation as all insure the maintenance of the parity of the two units and the equal power of every dollar at all the in the payment of debts, and we demand that to paper currency shall be kept at par with and re-

We call the attention of the people to the methods of practices of bassism by which the Republican or in this State has been managed in the last few

we denounce the last Legislature as corrupt and worthy of the confidence of the people.

A minority report substituted for the money pinck a resolution calling for free coinage of alter at the ratio of 16 to 1, and that the United this wait for neither England nor any other miles to enter into an international agreement specing the coinage of silver. The minority resistion was defeated by 270 yeas to 538 nays. An additional resolution was unanimously adopted after some confusion, without being referred the committee. It reads:

We view with alarm the armed invasion by Great in a force of the republics of this continent under a dain of right for the collection of a petty debt by two in claiming ownership and exercising jurisdiction over American soil belonging to our sister republic of Venezuela. The British Government has attached and defied the policy of Government as announced by President Monroe in 1634, and ever since adhered to, which should take the gravest apprehension in the minds of all patients Americans and call for the prompt and emitted demand on the part of our Government that a Hource Doctrine must and shall be respected and covernment.

The Socialist-Labor party also put a partial that in the field, as follows: For Governor, William Watkins; Lieutenant Governor, Wm. E. Transoy; Auditor, Daniel Wallace; Treasurer, George T. Brewster; Member of the Board of the Works, John Schuch; Clerk of the Surveys Court, Charles Odendahl.

497; Attorney-General, Prais. S. M.
233; Judge of the Supreme Court. Land.
Minshall, 98.839; Member of the Bazet. Co.
Works, Edwin L. Lybarger, 99.25c. Cock.
Supreme Court, Josiah B. Allen, 99.664. Members elected to the secretivescound decreal Assembly were: Senate, 31 Republicans, 6 Pennocrate; House, 88 Republicans, 25 Democrate.
OKLAHOMA, a Western Territory of the

OKLAHOMA, a Western Territory of the United States, organized in 1860. Population, according to the Auditor's returns of Feb. 1, 1804, 212,635. The increase at the close of the fiscal year June 30, 1805, in account with the Interior Department, was estimated to be 62, 365; area, 25,815 square miles, or, according to recommendation of the Dawes Commission for statchood, 41,000 square miles.

statehood, 41,000 square inites.

Government,—The Territorial officers for the year were: Governor, William C. Renfriew, Democrat; Secretary, Thomas J. Lowe; Attorney-General, C. A. Galbraith; Truscarer, J. E. Turner; Auditor, E. D. Cameron; Secretary of the Board of School-land Lenses, William Blincoe; Inspector General of Militia, James H. Hewitt; Chief Justice, Francis Bale; Assurfacts, Henry W. Scott, Justice Burford, and Justice Bierer; Secretary of the Pharmaceuthul Board, Edwin De Barr; Superintendent of the Board of Health, Dr. C. D. Arnold.

Finances.—The Auditor's report for the baennial period gives: Cash on hand, \$7,584.56; collections ending Nov. 30, 1884, \$192.727.84; disbursements, \$185,142.89. The general fund warrant inholded have a \$185.142.89.

warrant indebtedness was \$86.6-1.34.

Assessments.—The Territorial tax was 4-6 mills on \$1 for the following divisions: General revenue, 3 mills; university, normal acheed, and interest on outstanding beads, 0-5 of a mill each; and 0-1 of a mill for the use of the Board of Education. General fund was-rants, less cash in the treasury, was \$160.666. The levy of 3 mills on \$1 for general fund gave \$117,825. Taxes were small, on account of time extension allowed by the Legislature from April until the first Monday of August. The amount of taxes due in Newember was computed to be \$59,373.40. The proceeds from the sale of the outstanding 6-percent, school bonds, amounting to \$45.000, were used to exect university, normal-school, and Agricultural and Mechanical College buildings.

The taxable property, as equalized for 1900, shows an increase for the year from \$19,947,922 to \$39,275,189, because patents for claims have brought them under logal valuation.

Legislative Session.—The Assembly convened on Jan, S. 1895, in the university building. The Council was Republican, with the exception of 4 Populists and I Democrat, with John H. Pitzer as president. The House was composed of 16 Republicans, 7 Populists, and 3 Democrats, with Cassus M. Barnes as chairman. The Legislature adjourned March 15, after passing 119 bills, of which 6 were not signed by the Governor. The bills that became laws included the following:

Authorating bond focuse by counding, sitting, and consecutions on warrant indebtedness.

Providing for inspection of sile. Providing for school township debts.

Ameriling revenue statute to tax cattle " - - -

For your raise at of land leases.

li- lating to r wis

To establish a fiscal agency in New York.

ber areanization of the militia.

Relating to debts fraudulently contracted. Legal Fig. 9 c Perry Board of Education.

Providing for renewal of registered deeds destroyed by fire

listance to pharmacy.

Provide for assessment of railways and their Ingent

or Dr. der over South Canadian river.

T. protect live stock.

Treating a soldiers' home at Fort Supply, subject to to wermment cossion.

Legal ring all incorporated cities.

To product about raisers Keeley Cure Institute bill.

For protection of fish and game, permitting the killing of game between Nov. 1 and Feb. 1, and forbubling the shipment of game, or its killing, in cities. torving the right to prefer creditors.

For memorial to Congress for free homes for strip settlers, and one as to time for first payments in

reservations.

Relating to settlers driven from Wiehita reservation by Indian agent.

Creating an Historical Society at the university. Requiring registry of births of animals.

For grading of high schools.

Repealing the usury law, and providing 7 per cent. as contract interest.

Asking Congress to admit Oklahoma to statehood with New Mexico and Arizona.

Amending the alien law.

Regarding perpetual plan in stocks of building and loan associations.

Providing for a board of commissioners for the promotion of legislative uniformity in laws in the

various States of the Union. Giving preference to old soldiers and sailors in the employment of persons in public service.

Joint memorial to Congress for appropriation of \$50,000 for purchase of seeds for the Cherokee strip.

The Insane.-The care of the insane was provided for by the third Assembly, enabling the Governor to contract with the incorporated Oklahoma Sanitarium Company owning Highgate College, at Norman, for their care for three years, and for removal from Jacksonville, Ill., of patients there. The sanitarium opened on June 15 and received 34 patients. In November 77 had been received and 10 discharged as cured. The cost for the maintenance of each patient under contract is \$300.

Educational.-The university, at Norman, had an enrollment of 186 students and an average attendance of 160. The university receives 1 too for its support and an endowment from the The ! States Government, and its tuition is free. 1 the received additions to its equipment dur-generated vear. The State Historical Society, ... The Press Association, has a room in

and owns complete files of papers. had, at Edmond, provided a ... and academic training for 101 war without fees of any kind. b | for by the 4-mill tax, in-- limit lands, and appropria-Tre Board of Regents Var. ' fer the completion of

Tau Townerd College, at Still= 1' . burbling. h 104 pupils.

For the first time all the regular college classes were represented and a smaller preparatory class for the winter term was presented. No tuition or incidental fees are required, the expenses being met by an endowment from the United States and one third of the proceeds from Cherokee Outlet Section 13.

The public schools of the Territory had a total attendance during the year of 77,770. The total apportionment was \$54,665.65, derived from school-land leases, about 69 cents per capita. Stillwater is erecting a new school building,

to cost \$12,000.

School Lands.-In December only 10 per cent, of notes for 1895 were delinquent, and the department was receiving about \$3,000 a day from leases. To July 1 \$40,000 had been received. At the beginning of the year 1,950 quarter sections were leased and 4,244 vacant. West of Range 14 a Texan syndicate leased 300,000 acres of 552 sections. The proceeds from these leases amount to \$13,355.12 for public buildings; for colleges, \$13,703.03.

Railways .- The total valuation of railway property as assessed for 1895 was \$2,431,092.46. Oklahoma had 4 lines in operation at the close of the year—the Atchison, Topeka and Santa Fé and the Chicago, Rock Island and Pacific, which run through the Territory from north to south; the Choctaw, Oklahoma and Gulf Railway, which runs from El Reno eastward into Arkansas; and the Kiowa, Topeka and Santa Fé, which runs through the northwestern part of the Territory-making an aggregate mileage for the year of 463 miles. The Choctaw, Oklahoma and Gulf Company has built and equipped its road as far as Wistar Junction.

Banks.—There are 57 banks in the Territory.

Reports from 24 banks give an aggregate capital stock of \$546,000, with \$87,000 as surplus and undivided profits; deposits, \$1.302,000; loans and discounts, \$826,000; securities, \$190,000: cash and sight exchanges, \$465,000.

Indians.-Only 1 Indian reservation, that of the Kickapoo tribe, was opened to settlement in May. One hundred thousand acres of the Kick-apoo land were selected as indemnity school land for loss of school land in the Osage reservation, leaving a small tract over 2 townships for homestead entry. Nearly half of the school land is leased and new leases are being made rapidly.

In the Osage treaty the word "Osage omitted, and the tribe claims that the \$700,000 trust fund was intended for their own civiliza-

tion and not for tribes in general.

Mining.-Although Congress has declared the soil of Oklahoma not minerally productive, rich specimens of gold ore were found in the Wichita mountains in 1895, and also near Woodward in April and October. Other indications of valuable deposits have also been discovered. Coal and petroleum were found at Stillwater, anthracite east of Pavne County, limestone in Perkins, gypsum in many directions, and sandstone and brick clay in various localities.

Agriculture.—The cotton crop for the year was expected to bring \$115,000. Early in the season 2.318 bales had been marketed at Guthrie.

Climate.—The average rainfall for August was 5.07 inches, 1.90 daily, above the normal; greatest monthly rainfall, 8:30 inches at Keokuk Palls; least, 2:10 at Fort Sill; greatest daily,

Statehood.—A mass meeting calling a convention to memorialize Congress regarding the almission of Oklahoma to statehood was held in Shawnee in December. The Assembly passed a bill for the same purpose, and several bills were introduced in Congress for that object during the year.

OLEOMARGARINE. The act of Congress of Aug. 2, 1886, entitled "An Act defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine," went into effect Oct, 31, 1886, It defined "butter" as the food product usually known as butter, made exclusively from milk or cream, or both, with or without common salt, and with or without additional coloring matter; and under the term " oleomargarine " it designated "All substances heretofore known as oleomargarine, oleo, oleomargarine oil, butterine, lardine, sine, and neutral; all mixtures and compounds d oleomargarine, oleo, oleomargarine oil, butine, lardine, suine, and neutral; all lard extracts and tallow extracts; and all mixtures and mpounds of tallow, beef fat, suct, lard, lard oil, vegetable oil, annotto, and other coloring etter, intestinal fat, and offal fat made in imiation or semblance of butter, or, when so made, siculated or intended to be sold as butter or for An internal-revenue tax of 2 cents a und is imposed on the article, to be paid by the manufacturer. Manufacturers must also pay a special tax, popularly called a license, of \$600 a year; wholesale dealers, \$480; and retail dealconds, file inventories, keep books, and make seathly returns to the Commissioner of Internal Revenue, showing the quantity of oleomargarine produced and sold, and to whom sold, and the materials used in the manufacture. Wholesale dealers are also required to keep books ad make returns. Oleomargarine may be reoved from the manufactory for export to a gn country without payment of the tax. Imported oleomargarine is required to pay an ternal-revenue tax of 15 cents a pound in addition to import duties. This tax is prohibitory, ad none is imported.

The difference between fresh, genuine, unmelted butter and oleomargarine, which is always made in whole or in part of melted fats, can be detected by a microscope with the aid of polarized light, and with or without the use of a selenite plate. Microscopes are furnished to internal-revenue officers for use in determining whether articles sold as butter should be taxed as oleomargarine. A chemical analysis affords more conclusive proof than a microscopic test, and is

resorted to in case of doubt.

Oleomargarine must be packed by manufacturers in packages containing not less than 10 pounds each, and marked, stamped, and branded as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe. Sales made by manufacturers and wholesale dealers must be in original stamped packages. The payment of the taxes introduced by the United States law does not authorize a person to engage in the manufacture or sale in diaregard of State laws. Some States have passed

have been held by the counts to be as a valid exercise of the police power.

The number of factories in the time only producing elemangarine in 1865 was 21 and there were 246 wholesale dealers and 5,912 retail dealers. In 1894 there were 23 factories 279 wholesale dealers, and 7,254 retail dealers.

Of electrograms 56,958,165 periods were manufactured during the year ended June 29, 1865, a decrease from the preceding year of 12,664,141 pounds. The following figures show last year's production by States: Historic, 31,365,871 pounds. Rhode Island, 9,979,769; Kaneae, 7,189,235; Ohio, 3,372,491; Nebraska, 3,009,809; Missiouri, 1,013,544; Indiana, 653,263; Pennsylvania, 363,113; California, 223,289.

For export, 3,237,486 pounds were withdrawn

from the factories.

The following figures show the production in this country for each fiscal year since the law went into effect: On hand Nov. 1, 1886, 181,000 pounds. During the fiscal year existed Jame 30. In 1887 (from Nov. 1, 1886, 21,512,527 pounds; in 1888, 34,325,527; in 1889, 25,664,626; in 1860, 32,324,632; in 1891, 44,352,409; in 1892, 67,224,288; in 1894, 69,622,246; in 1895, 56,958,165; total, 410,569,625 pounds.

The following table shows the internal revenue receipts from electmargarine sources for the two years ended June 30, 1894, and 1895.

- Article - Control - Cont

The following figures show the electroargarine receipts from all sources for each fiscal year since the law went into effect; Year coded June 3, 1887 (from Nov. 1, 1886, \$723,948,04; on 1888, \$64,139.88; in 1889, \$894,247.91; in 1891, \$1.875,247.14; in 1892, \$1.206, 326; in 1893, \$1,670,643.50; in 1894, \$7.723,478,90; in 1895, \$1,469.211.18; total \$10.416.212.27

ONTARIO, a province of the Isominion of

Government.—There was no change in the Government during the year, and Sir Cliver Mowat's Cabinet, over the varied personalities of which he has presided since 1872, commissed of himself as Attorned General; Hon A. S. Hards, Commissioner of Crown Lands. Hon J. M. Gusson, Provincial Servitary, Hon G. W. Ross, Minister of Education, Hon R. Harsonert, Provincial Treasurer, Hon J. Bryden, Minister of Agriculture. Hon W. Harty, Minister of Public Works, Hon E. H. Brygger, minister without portfulio.

Finances.—Mr. Harvourt delivered his budget speech on Feb. 28. He pointed out that the actual receipts during the year ending Duc 21 were \$1,450,162, or \$500,250 more than had been estimated. From the Crown Lands Department \$1,057,582 had been received, maintained sale or license of timber limits. The case

tup: wa \$3,839,338, compared with \$3,907,145 in 1803, \$4,068,257 in 1892, and \$4,158,459 in 1891. Chal government, legislation, education, agriculture, justice, hospitals, charities, and colonization roads had all cost more than in the preceding year; but \$116,000 less had been expended on public buildings. He referred to the expenditure within a few years of \$1,356,997 for new asylums, and to the fact that in 1894 there were 4.441 mmates of the 7 Ontario asylums. institutions of this and similar kinds had cost for maintenance during the year \$756,984. Dealing with official salaries, he made an interesting comparison with those paid in New York State, which showed that the latter were more than double the amount of the remuneration paid by Ontario for the same work.

The chief items of the receipts for the venr were: The Dominion subsidy and special grant, \$1,196,872; the interest on capital held and debts due by the Dominion to Ontario, \$310,-020; from woods and forests, \$980,497; liquor licenses, \$277,330; law stamps, \$84,097; brewers' heenses, \$54,920; drainage debentures, \$793,-The principal heads of expenditure were as follow: Civil government, \$240,474: legislation, \$142,362; administration of justice, \$418,-746; education, \$684,559; public institutions, \$756,983; agriculture, \$181,064; hospitals and charities, \$182,692; colonization roads, \$116,-879; public buildings, repairs, etc., \$71,548; charges on Crown lands, \$111,158; aid to railways, \$147,516; asylums, etc., \$341,062.

Mr. Harcourt then dealt with the assets and habilities of the province. Deducting liabilities presently payable, and excluding money borrowed upon annuities and payable in future yearly installments, and payments pledged to railways, which together amount to several milhons, he claimed a surplus of assets amounting to \$5,269,840. The estimated revenue for 1896 was \$3,149,372; the estimated expenditure, \$3,-

401.905.

Legislation .- The first session of the eighth Legislature was opened in Toronto, Feb. 21. 1895, by Lieut.-Gov. George A. Kirkpatrick. The following are the more important para-

graphs in his speech from the throne:

In reased interest has been taken in improved the transit interest has lead and publica-tion of the Department of Agriculture. Various er at ital associations and organizations have been or he to asid demands for instructors. or they work in connection with the agricul-

Since the last session the main building of the Brockville asylum has been completed, and patients were admitted before the end of the year.

The total expenditures of the province were kept well within the appropriations, and the actual receipts were considerably in excess of the estimate.

Mr. W. D. Balfour was elected Speaker, and after a session of considerable interest the Assembly was prorogued. The principal measures passed were as follow:

Several acts incorporating electric and steam railway companies.

Respecting the agreement between the city of Stratford and the Grand Trunk Railway.

To incorporate the Algoma Dry Dock Company, To incorporate the Sault Ste. Marie Pulp and Paper

To authorize the town of Carleton Place to issue certain debentures

To incorporate the town of Sturgeon Falls,

To incorporate the city of Chatham.

To revive the act incorporating the Sarnia and Lambton Southern Railway Company. Respecting the verdict of jurors in civil cases in the high courts and county courts.

Respecting benevolent, provident, and other so-

cicties. For the further protection of children.

To amend the municipal light and heat act.

To amend the act respecting line fences,

To amend the cemetery company's act. Respecting the election laws.

Relating to leases, sales, and mortgages of settled estates

Respecting dower in mortgaged and other prop-

To make better provision for the widows of intestates in certain cases.

For diminishing appeals and otherwise improving the procedure of the courts.

Respecting municipal arbitrations.

To consolidate and amend the agriculture and arts acts.

For the prevention of fraud in the sale of fruit. To amend the act to provide for the admission of women to the study and practice of the law.

To make further provision respecting assignments for the benefit of creditors.

To make further provision for the public health. For the relief of cheese and butter manufacturing associations.

To amend the Ontario game protection act. To amend the insurance law.

Respecting the medical tariff.

Political.—Although the provincial elections of 1894 had given Sir Oliver Mowat's government a majority, the elements were so much mixed that it was impossible to say how small that majority might be until the House had met. The Patrons or farmer's party numbered at least 14, the Conservatives 24, and the Protestant Protective Association or extreme Protestants 3, against 51 straight Liberals. It was soon found that more of the Patrons voted with the Liberals, the result being a majority varying from 37 to 18.

One of the first questions to come up was the expense of Government House and its maintenance. After a long discussion, in which Sir Oliver Mowat plainly showed his indisposition to take any radical steps, it was decided, on a nonparty vote, that "a select committee of this House be appointed to consider all questions relating to Government House and its future maintenance by the province." The decision could not affect the position of the Lieutenant Governor, except to make it necessary for him uct, and value of the chaft to live upon his Dominion salary of \$10,000 instead of having expenses up to \$15,000 a year

allowed by the province in addition.

One of the questions during the election had en the opposition claim that provincial officials were so many partisan machines; that their fees were too large; and that some other method of appointment or selection should be found. On March 20 it was moved that

In the opinion of this House, the present mode of appointing registrars of deeds and other county offi-cials is unsatisfactory and should be changed; and that the appointment of all the said officials whose salary or remuneration is provided in whole or mainly by the localities for which they are appointed hould not be vested in the executive of the province, but in the municipalities.

The Premier strongly opposed the motion and any approach toward elective officials, in this greeing with his Conservative opponents in Dominion matters, and the motion was lost by

56 to 23.

During the session Sir Oliver introduced and carried an important law-reform bill. hanged the composition of the High Court of Ontario, and provided that in cases where the amount at issue is not greater than \$1,000, or which did not come under a special and specified class, an appeal may be taken directly to the Divisional Court, from which no appeal may be taken to the Court of Appeal. In cases that are over \$1,000 and not included in the specified exceptions appeal is optional to either the Divi-sional High Court or the Court of Appeal. If the appellant choose the former he has no option of a further appeal to the latter. The intention was to transfer some of the business now going to the Court of Appeal to the High Court.

Fees Commission.—During the session the Commission reported. The result of the Fees Commission reported. investigations, which fill a bulky volume, is a trong condemnation of elective officials, conclusions are summarized as follow:

No change should be made in appointing the of-Sees by handing over the choice to local authorities. The fee system should be continued as to all admintrative offices-registrars of deeds, clerks and registrars of courts, sheriffs, and ballitfs. Salaries should be paid to all judicial or quasi-judicial officers. The expenses connected with elerical and other assistance in the offices should be systematized so that uniformlty and not diversity may characterize the service A limit should be placed upon the receipts of fee paid officers, to be fixed by the Legislature.

Immigration.-The report of the Provincial partment shows that in 1894 Ontario received 5,968 immigrants, a decrease of 603 from the preceding year. The report refers to their or cupations, and regrets that a comparatively small number of farm laborers come to the country, the demand always exceeding the supply. It adds that the prevailing rate of wages was slightly lower than in 1893 and the expenditure on immigration account was \$5,140. against \$6,974 in 1893.

Agriculture. - This is the chief industry at ! occupation of Ontario. In 1894 there were 8227,153 acres devoted to staple fleid cross 2,703,241 acres to pasture, 198,968 to or hard and garden: a total of 11,129,362 acres, 11 cmparison with 7,740,073 in 1883. The area, park

An appeal was taken to the Judicial Comme the of the Imperial Price Council, and polyment in the main was upheld, commission appointed by the Demici

criment to inquire into the question has reperted strongly against prohibition, the House of Commons having previously voted in favor of its being dealt with by the provinces.

Minerals.—A statement issued by the Bureau of Mines gives the figures of the mining industry during 1894, which seems, like everything else, to have been depressed. It shows the number of patents issued as 40, in comparison with 63 in 1893; the leases 66, against 122; the revenue from leases, sales, and rentals as \$17,942, against \$26,167 in the previous years. The total value of the mineral product during the year, estimated at the point of production, was \$6,088,758, or \$31,995 less than in 1893. The people engaged in the industry numbered 6,075, and the wages paid were \$1,840,289. Compared with the previous year, the people employed were reduced by 1,100, and the wages paid by \$100,000.

The nickel and copper industries made good progress, the production of the former being equal to 2,570 tons, and of the latter 2,748 tons of metal, compared with 1,642 and 1,431 tons, respectively, in 1893. The production of gold was \$32,960, or about the same as in 1893.

Statistics of Crime.—There was an increase of 831 committals over 1893, half of which arose from petty larceny, trespass, and burglary. The average cost per prisoner was a little less than 14 cents a day. The inspector, in his annual report, dwells upon the decrease in the number of professional tramps, and the success of strict discipline and compulsory work in jails in dealing with this class.

Loan Companies.—The report for 1894 shows 89 companies doing business in lending money on mertgages of real estate. They had a subscribed capital of \$94,047,711, with liabilities to stockholders of \$50,582,921; deposits from the public of \$18,352,607; debentures payable in Canada, \$9,789,799, and payable elsewhere, \$51,-014,592. Their loans on real estate aggregated \$115,000,000.

Education.—The school system is under the control of the Minister of Education, and the schools are undenominational, although the schools are undenominational, although the schools under the terms of confederation. Education between the ages of seven and thirteen is compulsory for not less than one hundred days in the year, but the law is not very rigorously enforced. The figures of the Education Department for the year 1894 are as follow:

	III Ma	Public,	Separate.	High.
٠,		5,649	825	129
	1	443,441	89,762	23,055
	•	5,110	714	554

		8,910,594	331,307	658,332
		4 2 1	851	1 004
		8/10	201	924

Miscellaneous. [60] chattel mortgages in cong the past five years 11 687 in number, valued 21 farmers in 1894, 87,773,321, against 4 farm laborate and 12 farmers in 1847 (without load) at \$247 (without load) at \$250 respectively, in 1803, 4 farmouth,

against \$6.47 in 1893 and \$6.21 in 1892. The tonnage of the vessels engaged in the coasting or lake trade of Ontario was 11,299,718 in 1894, compared with 9,832,803 tons in the preceding year.

OREGON, a Pacific coast State, admitted to the Union Feb. 14, 1859; area, 96,030 square miles. The population was 13,294 in 1850; 52,-465 in 1860; 90,923 in 1870; 174,768 in 1880; 313,767 in 1890. By the State census of 1895 it

was 362,762. Capital, Salem.

Government.—The following were the State officers during the year; Governor, William P. Lord; Secretary of State, Harrison R. Kineaid; Treasurer, Philip Metschan; Attorney-General, C. M. Idleman; Adjutant General, R. W. Mitchell, who resigned and was succeeded in April by B. B. Tuttle; Superintendent of Public Instruction, George M. Irwin—all Republicans; Fish and Game Protector, H. D. McGuire; Railroad Commissioners, H. B. Compson, I. A. Macrum, James B. Eddy; Pilot Commissioners, John F. Brown, B. F. Packard, John Fox; Chief Justice of the Supreme Court, Robert S. Bean; Associate Justices, Frank A. Moore, Charles E. Wolverton—all Republicans.

State Census.—The census taken in 1895 gives the following results for the counties:

COUNTY.	Males.	Females.	Total.	Voters.
Baker	8,890	2,671	6,061	
Benton	8,315	2,977	6,292	1.80

l'nion	6,097	4.768	10,865	8,826
Wallowa	2.190	1.791	8,981	1,176
Wasen	5.887	4.562	10,449	8.236
Washington	8,250	7.112	15,862	4.044
Yamhili	7,120	6,948	14,068	4,088
Total for the State			862,762	

Eleven counties show a decrease since 1890; of these, 10 are in eastern Oregon—east of the Cascade mountains. Coos, the only one in western Oregon that has not increased, shows a loss of 384. The greatest increase is in Multnomah County, amounting to 18,066. Clackamas County shows the largest percentage of increase, having advanced from 15,233 to 21,253.

The population of Portland is 81,342; that of Salem, 10,261.

Other statistics given by the census were: Whole number of acres cultivated, 1,840,911; bushels of wheat, 12,684,412; of corn, 325,714; of oats, 6,645,812; of barley and rye, 1,425,719;

of potatoes, 2,777,596; of plums, pears, and prunes, 295,431; number of sheep, 2,388,011; of hors, 189,304; of horses, 193,373; of cattle, 406,-437; number of pounds of wool, 12,359,753; of hops, 15,626,555; of butter and cheese, 5,626,457. number of tons of hay, 746,613; number of feet of lumber cut, 282,182,318; number of bushels of apples, 1,045,919. Valuations.—The returns from the State

Board of Equalization show a discrepancy from the census returns in many particulars. The difference in the numbers of domestic animals is, perhaps, accounted for by the fact that animals under a given age are not assessed for taxation. The taxable wealth of the State is summarized as follows: Railroad land, \$1,587. 518; wagon-road land, \$702,447; unimproved land, \$19,913,147; cultivated land, \$34,046,622; railroads, \$5,125,182; telephone and telegraph, \$152,814; horses and mules, \$2,898,237; cattle. \$3,620,924; sheep and goats, \$1,724,685; swinc. \$274,896; town and city lots, \$38,856,398; improvements on lots, \$16,338,741; improvements on deeded lands, \$6,078,178; money, \$1,551,809; notes and accounts, \$9,057,432; shares of stock. \$1,818,072; improvements on deeded lands, \$81,483; household furniture, etc., \$3,743,584; machinery and equipments, \$1,522,565; merchandise and implements, \$8,894,752; rolling stock of railroads, \$628,174; total value of all property as returned by counties, \$158,819,730. The gross amount, as equalized, is \$158,967,177; total exemptions, \$8,621,751; net taxable, upon which the State levy will be made, \$144,445,426. The rate of taxation for 1896 is 48 mills for the general fund.

Education .- Reports for the school year ending March 4, 1895, give the following figures: There were 64,567 male and 62,398 female persons between the ages of four and twenty years resident in the State; resident pupils enrolled, 83,356; average daily attendance, 56,046; teachers employed, 3,274; schoolhouses built during year, 75; schoolhouses in the State, 1,844; value of schoolouses and grounds, \$2,453,992; of fur-niture and apparatus, \$336,559. The average per cent, of the taxes voted and levied for school

purposes was 5.31 mills.

The State Normal School, at Drain, sent out one of its largest classes in June, consisting of 1 post-graduate, 4 commercial, and 35 normal

students.

The Agricultural College, at Cornwallis, graduated in June its largest class, numbering 51, of whom 26 were girls. At the beginning of the new school year, in September, 255 students were enrolled.

The medical department of Willamette University has been moved from Portland to Salem. The medical faculty all resigned the same even ing that the trustees decided upon the removal.

but before the decision was learned.

State Institutions.—The appropriation to the Soldiers' Home by the Legislature of 1895 71. was \$24,000, and for deficiency \$10,981 home was opened May 24, 1894, with 7 inmates A joint committee of the Legislature was at pointed to investigate the affairs of the line tution, and reported finding bad business a apparatument, extravagance, and dishonesty on the part of the managers.

An appropriation of \$ 2 min deaf-mute whol, and the ' ? . . . blitted school. The deaf rest . ceived for deficiency \$7 1.6 and 1 school \$1.179

For new buildings at the Ref re -. -\$5,176 was appropriated, for general er w \$36,000, for improvements and salarsee \$ 15,100

for waterworks and lighting \$10 300. The appropriation for the Penifestians was \$131,250. The number of excess to March was 350, of when I were women, in the day the number was 326. The mothly pre empate expense was about \$11. There is week enough only to keep the convicts busy about half the time. The store foundry is run three days of each week, employing 165 men. There are 22 trusties, who are allowed to work on the farm.

In July the number of paters to in the Incance Asylum at Salem was repreted as 1,006 the number of officers and employees was 117 expense per capita was given as # " 1 a June. but after the asylum management changed hands, Aug. 1, it was found that the per cupata expense had been really greater About 120 acres are under the management of the accion.

The Legislature of 1863 appropriated \$165,000 to buy land and build a branch are use in the eastern part of the State. A permanent me junction was sought to restrain the Bard of Building Commissioners occasing of the ters ernor, the Secretary of State, and the Treasures -from proceeding, on the ground that the Constitution declares that all State testitution of all be at the capital. A permanent input to a war granted, an appeal was taken, and the Supreme Court reversed the decision remanding the case to the lower court with leave to amend. The next decision made the injunction perpetual and on appeal again to the Supreme tourt the injunction was dissolved and the complaint dismissed, on the ground that the ti-cersor could not be enjoined while in the discharge of his The constitute cal question was official duties. left underided.

Industries and Products. The request of the tiame and Fish Protected ob we the market of cases of salmon packed in time in the Oregon side of Columbia river to have been 633,170 and the value \$2.252 405 65. The value of aggrava-tus used was \$604,250, the number of fact case 25, and their value #6, with white of as and fartories, such as can and be a and fertilizer plants. there were 5, of the value of \$191 am. The ber of men employed in the fisheries, factories, etc., was 5,349, and the wages, \$1,256,266

The statistics of the Oregon Bailway Navigation Company show an increase

transportation of grain and its products for 1805 f 200,000 tons over 1894. The proportion of expenses to earnings in 1894 was 84 per cent, white in 1895 it was 75‡ per cent. The gross carnings were \$2,819,406.

The expense of maintaining the Northern Parific in Oregon was not met by its earnings,

which came short nearly \$75,000.

The Washington and Columbia showed a percentage of expenses to earnings of only 39 percent. The business of the company is almost entirely transportation of grain and live stock. Its gross earnings were \$61,588, and its operating expenses \$24,043.

On all the roads there is a decided falling off

shown in the passenger traffic.

Industrial Exposition.—The Oregon Industrial Exposition opened at Portland, Oct. 5, and closed Nov. 5. It was a fine exhibit of the products and resources of the State, and was subscribed, as it was not expected that the low price of admission would yield income enough to defray expenses; but the secretary's report shows that this fund was not drawn upon. Single admission tickets were sold at 25 cents, and children were admitted for 5 and 10 cents. The receipts were \$20,460.23. The estimated total attendance was 97,355. The balance remaining was \$2,226.66.

Public Lands.—The total sales of lands through the office of the clerk of the Oregon State Board of School Land Commissioners during 1895 amounted to 71,923-96 acres, and the

amount paid was \$92,956.93.

The Siletz Indian reservation was opened to settlement July 25. It has an average width approximately of 12 miles, and runs up and

down the coast about 24 miles.

Assessment of Deposits.—A law passed in 1870, providing for the assessment of bank deposits, which has been largely inoperative because banks have refused to obey its provisions, was brought up in a case of indictment of a bank officer for refusing to furnish an assessor with a list of depositors. The law was declared unconstitutional, for the reasons, among others, that it "attempts to require of a particular class of citizens the performance of a special duty not required of any other citizen—i. e., that of assisting the assessor of this county to discover a periam class of personal property of the tax-payers of this county to enable the assessor to a serious classifier and that it is in direct conflict.

The act of Congress establishing the natical classifier system.

Legislative Session.—The eighteenth bienin of the Legislature began Jan. 14, 23. On joint ballot the Repubits, the Populists 10, and the legislature began Jan. 24. C. B. Moores Speaker of

was to be elected.

on members, held

of Senator, was

the minority

the action of

F. A. Moore

as the first by the I' by the

Democrats. Mr. Dolph did not receive the number of votes necessary to his election, and a deadlock ensued, which lasted almost till the close of the session. George W. McBride was then named as a candidate upon whom the Republicans might unite, and he was elected, Feb. 23, on the sixtieth ballot.

The ballot law was amended so as to provide that a candidate's name may appear in only one

place on the ballot.

County courts are authorized to form irrigation districts upon the vote of electors in the

territory proposed to be included.

County courts are also empowered to form diking districts, similar to road districts. Claisop is the only county liable to need this provision.

A State Board of Medical Examiners for granting licenses to practice was created. It is to be appointed by the Governor, and to consist of one homocopathic, one eclectic, and three allopathic physicians. A pharmacy board also was created,

A law was made extending to one year the time within which a judgment debtor may redeem property after it has been sold under execution, and the sale confirmed. The question came before the courts during the year, whether this change would apply to mortgages given while the old law was in operation, the claim being made that this would be contrary to the United States Constitution, which ordains that no State shall pass any law impairing the obligation of contracts. The court held that the law was valid, the purchaser being no party to the contract made by the mortgage; if he happens to be the same person as the mortgagee, that is merely accidental, his relation as mortgagee ceasing when he assumes that of purchaser; and that the sale is the remedy or mode provided by law for the enforcement of the contract, and not a part of the contract.

The only bill for revenue passed at the ses-

The only bill for revenue passed at the session was one for taxing insurance companies, which, it was estimated, would bring \$40,000 a

year to the State.

An act was passed providing for the assignment and satisfaction of mortgages, one prescribing the method of discharging attachments, and one providing that attachments may be sworn out where mortgages or other pledges have been given, but have been rendered nugatory by act of defendant.

An appropriation of \$9,000 was made to the Board of Horticulture for use in exterminating

fruit pests.

The law for the protection of fish and game was changed in some respects. It is a sportsman's measure only, and makes no mention of the salmon industry.

Among other acts of the session were the fol-

lowing:

Authorizing the Domestic Animal Commission to apply the "tuberculin" test to cattle in supposed cases of tuberculosis.

Requiring building and loan associations to deposit securities with the Secretary of State or trust companies and to make statements of their affairs to the Secretary of State.

Limiting liabilities of stockholders in corporations

to amount of their unpaid stock.

Punishing for killing song birds or molesting their eggs or nests by \$5 to \$100 fine.

Amending the act creating the State Board of Horticulture and appropriating \$9,000 for the ensuing two years.

Creating liens on horses for shocing.

Prohibiting minors from going into places of evil mort and fining corporations \$100 for sending them

Authorizing the Governor to lease by contract con viet labor at not less than 85 cents a day.

Fixing the age of consent at sixteen years.

Four constitutional amenda - to be submitted to the people at the tion, among them one abrogating that ; which guarantees foreigners in the "call property rights with citizens, one as the article prescribing the means of premium rights of way for water pipes receivate etc and inenabling the Legislature to increase the number of justices of the Supreme Court

PARAGUAY, a republic in South America. The legislative power is vested in a Congress consisting of a Senate of 13 members and a Chamber having double that number. The President, for the term of four years ending in 1898, is Gen. Juan B. Egusquiza.

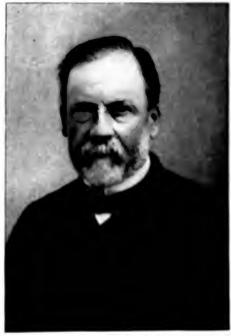

Finances.-The treasury receipts for 1894 were 4.547,135 pesos, of which 245,208 pesos came from sales and leases of land, 3,813,619 from customs, and 488,308 from other taxes. The expenses were 5,007,936 pesos, of which 1.542,096 pesos were used in general expenses of the Government, 94,772 pesos in payment of debt, and 3,371,068 pesos for extraordinary purposes. In respect to its bonds held in Europe, on which no interest has been paid since 1891, the Government agreed in August, 1895, to an arrangement whereby it will pay 1 per cent. for the first three years and 1 of 1 per cent. more every succeeding three years till 3 per cent. is reached, and will begin redemption in 1900.

Colonization .- At the end of 1893 there was one German colony numbering 941 persons and another having 273, an Italian colony of 230, the Colonia Nacional having 1,015, another settlement with 814, and the socialistic Australian community, called Nueva Australia, which then numbered 420 persons. The Government conceded the Australians, who had left their own country in disgust after the panic of 1893, a rich tract of 900 square miles on the Tibiquari river, on the condition that 1,200 immigrant families should be settled there within six years. Colonists presented themselves in numbers, each subscribing \$300. In this way \$150,000 was raised to start the colony. Those who first arrived, in September, 1893, were disappointed at their wild surroundings. All were to receive A division arose over the question whether intoxicants should be allowed, and when the chief manager and the total-abstainers insisted on having their way 85 persons left the colony. They were on the point of returning to Australia when the Paraguayan Government granted to them another tract, in the department of Gonzalez, where they have since prespected. Another schism occurred in the original colony. in consequence of which the director and about 50 of the sturdiest colonists went to settle in another territory. The bickerings continued. and in September, 1894, a band of 25 left and went to Buenos Ayres. Those who were left then reorganized the community, dropping most of the communistic features and choosing for leaders their most intelligent men.

Commerce and Communications. - The value of imports in 1894 was 2,222,000 person 111

gold; that of exports, 1 855,000 peace. During the year 220 stramers and 50 sailing remels of an aggregate bunden of 104,524 tons, were entered from foreign ports at Assessed half the imports come from England. The principal articles of import are testile goods, wine, and rice. The chief expects are gerden mate, hides, tobacco, and timber There are 156 miles of railroad. A telegraph line bringing Asuncion into communication with other communication tries was completed in March, 1994.

PASTEUR, LOUIS, a French chemist, born in INde (Jura), Dec. 27, 1822; died in Paris, Sept. 28, 1895. He was the son of a tanner who had been a soldier and who had been decorated for valor. When he was an infant has parents

LICTO PASTERS

removed to Arless, where he cetered the even munal school and there showed a greater fond ness for eletching than for studying. Solarquently he went to the college in Beautie and was graduated as Bachelor of Letters. came a tutor there and prepared for the f

Normale in Paris. At the examination he attained the rank of fourteen and was admitted, but this did not satisfy him, so he settled in Paris and studied in the Institution Barbet, and in 1843 was admitted to the Ecole Normale, standing fourth in the class. Here he studied chemistry under Balard and Dumas and crystallography under Delafosse, and after completing his course was successively assistant in physical sciences and demonstrator in chemistry, receiving the degree of Doctor of Sciences in 1847. While in the Ecole Normale he showed the cause of the difference in the behavior of the ammonium-sodium racemate and the correspending salt of tartarie acid with polarized light to be lack of symmetry in the crystals. At this time also he pointed out the difference between the dextrorotatory and the lavorotatory tartaric acid, and proved that the two acids could be separated one from the other by a process of fermentation started by a special form of mold. This investigation, establishing the relations between crystalline form and optical properties, and throwing considerable light on the architecture of molecules, was really the foundation of stereochemistry, and was made with funds supplied from his own slender resources; his success in this particular branch of inquiry was considered remarkable for so young a man. In 1848 he was called to the chair of Physics in Dijon, and in the same year he accepted a similar appointment in Strasburg.

In 1854 he was charged, in the capacity of dean, with the task of organizing the faculty of sciences in Lille, and he remained there until 1857, when he was called to Paris to take charge of the scientific studies of the Ecole Normale. He continued in the active administration of this work for ten years, and in 1862 became also Professor of Geology, Physics, and Chemistry at the Ecole des Beaux Arts. Meanwhile in 1857 he began his famous researches on fermentation. He distinctly proved that the changes occurring in each of the various processes of fermentation were due to the presence and growth of a minute organism called the ferment. His own words are: "The chemical act of fermentation is essentially a correlative phenomenon of a vital act beginning and ending with it. I think that there is never any alcoholic fermentation without there being at the same time organization, development, multiplication of globules or the continued consecutive life of globules already formed." Thus the science of bacterizy, of which he has been called the father. ame into existence. He also showed that this Algo was not so simple as was represented in resplitting up of sugar into alcohol and and, but that other important subthe produced, as, for example, succinic The practical application - the later when he showed that the bed, and when he indicated wine as well as in beer each bees many and the present of turning sour or a sheet of turning sour or alcoholic state of when kept for a time, was found by the color of the to a similar cause. Such diseases were remedied on his suggestion by a process called "Pasteurization," which consists in heating the wine slowly, when bottled off, to a temperature of 65° C., and then allowing it to cool. A similar process was applied to beers. By pointing out that the deterioration of certain wines and beers was due to a specific ferment, and by showing how the action of this ferment could be prevented, he accomplished a saving of enormous sums to two very important industries. And this was done by careful experiment and by bringing to bear on the subject an intelligence trained in exact methods and in unerring observation, coupled with employment of the microscope and the other aids of modern research.

In 1865, on the suggestion of Dumas, the chemist, he undertook the study of the silkworm disease, which at that time threatened to destroy the entire silk industry of central France. The value of raw silk in 1853 was placed at 180, 000,000 francs, and in 1865 it had fallen to one fifth that sum. Vittadiani and Cornalia had shown in 1859 that the mobile corpuscles, which previous observers had detected in the worm and in the eggs, were closely connected with the disease. Pasteur, when he began the inquiry, had never even seen a silkworm, and knew nothing of its habits and life history. He spent several years in tracing the germs of the "pebrine" disease through the various stages of development of the egg, larva, chrysalis, and moth, and soon found that the parasite, once introduced, persisted through all the stages of the animal's life, and that even the eggs were infected. He came to the conclusion that the only method offering any hope of success was a radical extermination of all infected moths and eggs, and recommended the following plan of treatment: When the female has laid her eggs and dies, the body is dried, pounded up in water, and examined microscopically; if no corpuscles are found, the eggs are preserved for culture; but if any corpuscles are discovered, all the eggs of that moth are immediately burned. Each moth is examined in the same way, and all infected hatchings are destroyed. In 3 departments alone subsequent to the application of this treatment the annual value of silk rose from 1,500,-000 to 22,000,000 francs.

In 1867 he was given the chair of Chemistry in the Sorbonne, which he held until 1875. Toward the close of this period a controversy arose as to the truth of the theory of spontaneous generation. Pasteur, by a series of the most delicate and convincing experiments, proved the exist-ence of micro-organic forms and their spores in the air, and showed that while unpurified air was capable of setting up fermentative changes of various kinds, the same air freed from germs could not give rise to these changes. The advocates of spontaneous generation were silenced. Later he began the study of inoculation as a cure for diseases other than smallpox. He demonstrated that animals of the ovine and bovine species may be prevented from contracting the disease of anthrax (charbon) or splenic fever, as it is variously called, by inoculating them with attenuated germs of the specific minute organism which is found to exist in that disease and to be its efficient cause. The mortality, which before the introduction of the preventive treatment was in the case of sheep 10 per cent., was after the adoption of inoculation reduced to 1 per cent. In the case of chicken cholera he demonstrated its cause to be a microscoccus which, when it was cultivated in the manner prescribed by him and the fowl was vaccinated with the attenuated virus, rendered the latter proof against the cholera, even when placed

among other infected fowls.

Pasteur's last and crowning triumph was in the application of his method of moculation to rables. He began the study of this subject in 1880, but could isolate no specific germ. He, however, found that the disease had an especial affinity for and was concentrated in the nervous centers; hence he employed emulsions of nervesubstance in his inoculations, as he otherwise would have used culture fluids. Rabbuts, in which the disease always assumes a paralytic and painless character, were inoculated, and the cords of these animals, after appropriate treat-ment, were used for the inoculation of others; and this process was repeated until a sufficiently attenuated virus was obtained. He soon found that dogs which had been inoculated were perfeetly protected and that they might be butten by mad dogs or inoculated with the most powerful rable virus without infection. In treating a case of suspected infection from a rabid animal a series of inoculations was made, beginning with the weakest fluid and ending with a virus that, if used at first, would have inevitably proved fatal. Its application to humanity was tried, and the story has been told in bronze. The French nation erected, with funds raised by popular subscription, the Pasteur Institute, which is devoted to carrying out in practice the

antirable treatment, with laboratories and every convenience for extending by research the knimedge of the preventive treatment of infections disease. In front of this building is the status of a Free h shephert to a construggle with a mai the will be used in the status of the status killed the description of the status killed the description.

"City of Glasgow" made a most satisfactory record in all kinds of weather, and she is now stationed at Harwich, one of the most exposed points on the English coast,

This craft has been presented to the Lifeboat Service by the people of Glasgow, who raised the required funds in small subscriptions, and are still contributing largely to the institution through the establishment of what is known as "Lifeboat Saturday," a certain day on which subscriptions are solicited for this

ourpose.

A Novel Craft.—The Layman pneumatic sporting boat is an invention that commends itself at first sight to the hunter and the fisherman. The accompanying illustrations suffi-

SPORTING BOAT.

ciently show its external appearance. In effect it is an elliptical float made of India rubber or other flexible waterproof material, tublike, and with a pair of boots permanently attached to its bottom or under side. These boots are provided with fins or paddles at the sides and under the soles, which fold when moved forward and open on the return stroke. The navigator, seated in his boat, with his feet in the boots, moves his legs backward and forward as in walking, and

SPORTING BOAT, WITH STORM CAPE.

propels the boat or turns at will in any direction. The sides of the float are double, and are divided into water-tight compartments, any one of which is capable of sustaining one person it

To upset is well-nigh out of the question, except by design; and if by accident the boat should be filled with water, it will still float with the load for which it is designed, and can still be propelled as described above. It is hamible, though not very easy, for the wearer of the Layman boat to walk on land or wade in shoal water. When affoat, a fair rate of progrems can be made in still water, not to exceed 3 miles an hour, but this is effected in absolute silence and without the conspicuous movement of paddles or oars so alarming to game of all kinds. A storm cape is provided, which buttually protects the wearer against rain or spray. The float is also provided with sockets in which screens or awnings can be placed for further concealment or protection.

Electric Propeller.—A portable electric propeller, capable of being applied to any boat, has been introduced recently by the Portable Electric Boat Propeller Company, of New York. Its general appearance is shown in the illustration. Briefly described, the propelling device

Voting Machines, - The pro-New York provides for the one elither the permanent is the v to the future, but all who favor : direct forms of viding must be a spetreduction of all h markets with the proumed chart is to et al e the said whether ignorant or intelligent to ride for who series he pleases without the penetrality for a se tion or compulsion by political managers. consists of a curved tube carrying a screw propeller at the submerged end, and having within it a freely revolving flexible shaft connecting with the propeller. An electric motor is mounted upon the tube near the point where it rests upon the stern of the boat. A handle or tiller in continuation of the tube, projecting still farther forward, is within reach of the steers-man. The motor is actuated by batteries carried in the boat amidships. The flexible shaft is made of phosphor-bronze. Near the propeller, and on the under side of the tube, is a metallic fin which serves as a rudder. The whole apparatus is pivoted in a socket affixed to the stern of the boat. The propeller, motor, and rudder together weigh about 35 pounds, and the batteries weigh from 100 pounds to nearly 300, acording to the amount of power to be developed The machinery is set in motion and disengaged by a very simple and easily operated adjust ment, and the propeller can be driven (out of water) to 1,500 revolutions a minute A lows 10 to 18 feet long can be propelled by this apparatus 3 to 5 miles an hour under favor able conditions. The outlay for problemry purposes is about 5 cents an hour. What not in use for the propelling machinery the batteries are available for any other purposes to which electricity in this form can be applied.

and the wire gauze. Of course a neater and more workmanlike arrangement will occur to any one with mechanical ingenuity, but the principle is merely to have an opening extending the entire width of the window at the upper part of the screen. It is evident that it is possible for these to enter the room through this opening, which is only intended for exit, but the few that will find their way inward bear a very small proportion to the larger number that madvertently second the inventor's intention. G. P. Yule, the inventor, attaches no conditions or patents to his device, and it is safe to conclude that its use is open to all.

Rapid transit is one of the vital questions of the day, not only in the large cities but for long distances as well. The necessary conditions of electric motors and high rates of speed seem to indicate that for 2 through lines an almost straight course must be laid. With speed such as is contemplated, any curves must be very objectionable, owing to the almost irresistible lateral pressure. Experiments in the direction of single-rail roads have been in progress during the past year. A road of this description has been constructed across Long Island, and an experimental section has been in

successful operation for some months.

Another device in this same direction is the Chase-Kirchner Aërodromic Railroad. As on the other road, the ends of the cars are sharp like the bows of a ship, so as to offer the least resistance to the air. In this road, however, a novel feature is introduced in a set of aëroplanes, readily adjustable, and intended to aid in overcoming the grades that may be encountered along the line. Elaborate experiments by Maxim, Langley, and others have proved that the most effective acroplanes are short in the direction of motion—that is to say, like a bird's wing moving edgewise. A set of Venetian window blinds gives a good idea of the arrangement of these aëroplanes; they are supported on strong framework above the cars, and can be delicately adjusted to any angle. On both these roads a very high rate of speed is anticipated, 150 miles an hour being claimed as possible, while 100 miles an hour is confidently hoped for. To attain such speed with safety, curves must be abolished; and since there must be no such obstructions as are inseparable from grade crossings and the like, the track must be elevaried. The single-rail system of course greatly the engineering problem, does away a of the necessity of snow sheds and the like, In the dress the expense of right of way to a mum Otj a level the aëroplanes will be to ally straight, and an ingenious me-. 161 is arranged so that the lifting or decrease automatically a strepness of the grade.

from a financial point of view is assured. This is believed to be at present the only transway in Europe that is successfully operated by means of an underground conduit. The safety of the system as regards possibly fatal shocks from broken wires and the like is said to be fully

demonstrated in practice.

An interesting experiment is reported from the American Car Company of St. Louis, which constructed a car especially for the purpose, space for the batteries being provided under the seats, accessible through openings at the rear of the car. The system followed was that of W. L. Silvey, of Dayton, Ohio, and the aim of the constructor was to secure the highest efficiency and the least possible weight consistent with an apparatus capable of withstanding the almost unlimited amount of hard usage that is unavoidable under such circumstances. It employs 108 cells, each weighing 27 pounds, and the total weight of the batteries is about 3,000 pounds. In a test run a round trip of 9 miles was made in thirty-five minutes. This included several complete stops, two considerable grades, several railroad crossings, and a long bridge. It was evident that 20 or 25 miles an hour was easily within the capacity of this car. It made 6,200 car miles, and no repairs were necessary either for the batteries or for the motor, the only renewals required having been a new set of carbon brushes. The total expenses for repairs was \$2.50, all of which was expended upon the trucks. It is believed that a car can easily be operated at a cost not exceeding 8 cents a mile.

With the advent of storage batteries for ear service, the danger from rioters will be largely diminished. Under the trolley system, a single broken wire may disable an entire line of ears, while if each car is provided with an independent storage battery a separate attack will be necessary for each ear in order to effect a whole-

sale stoppage.

Electric Traction.—The end of the year saw 9,000 miles of electric railway of different types in operation in the United States and Canada. The rolling stock included 30,000 cars, with 850,000 horse power, and the population per mile of track was 8,200. In contrast with this, in all Europe there were at last accounts only 500 miles in operation, with 1,260 cars and 24,700 horse power, and this with a population per mile of track of 765,000. Germany leads off with 190 miles; Great Britain follows with 65, France with 60, Austria-Hungary with 50, and Italy with 15. The rest of the 460 miles is made up of small lines scattered through the various nations. The English quota lies mainly in 2 lines, in London and Liverpool.

New Building Material.—Specimens of glass building blocks, or glass bricks, as they are popularly called, have been introduced in France and Germany, it is reported, with satisfactory results. They are hollow blown, very light, and strong enough to serve many architectural purposes. For domes, it is believed they will be peculiarly adapted, since their lightness will be largely in their favor as contrasted with brick or stone, and they will admit a modified light from sun and sky that will be very pleasing. In like manner they may be used for wall spaces where absolute solidity is not required,

PATENTS AND INVENTIONS.

and in many cases they may take the place of windows, where light without ventilation is the principal end in view. Walls constructed with these "bricks" retain heat longer than any other kind, and since they admit similight they are peculiarly adapted to the building of greenhouses and conservatories. Walls 27 feet high have been built of glass bricks, without a strengthening framework, but above that height some supports are regarded as necessary. No mention is made of the endurance of the glass bricks under heat, as in case of fire, but they will no doubt stand-quite as well as many of the substances now in common use. They are known to the profession as "Talconnier's blownglass bricks," and specimens were shown at the annual exhibition of the Architectural Langue.

annual exhibition of the Architectural League.

Disposal of Kitchen Refuse,—Among the most difficult of the sanitary problems in connection with housekeeping, particularly in large cities, is the disposal of kitchen refuse. How to remove it and keep it separated from other kinds of waste material is a perpetual puzzle for municipal boards of health. A simple and inexpensive device has been introduced lately by the Sanitary Construction Company, of Bestep, and has received the approval of the authorities of that city and New York. Col. George E. Waring, Street Commissioner of New York, has tested it personally, and gives it his approval. It consists of an addition in the

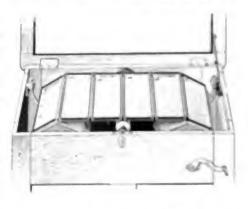

A HOUSEHOLD GARBAGE CARBONIZER.

shape of a horizontal cylinder set into the kitchen stovepipe near the point where it issues from the stove or range. One end of the cylinder is removable, and attached to it is a rack or secop with perforated sides and a tight bottom, as shown in the illustration. The refuse is placed in this scoop, and the whole is then reinserted in the cylinder. Enough open space is left around the receptacle and within the cylinder to admit of free draught, and the action of the heat and the products of combustion from the fire soon drives off the water from the refuse and reduces the solids to the form of carts a All odors and gases resulting from the process The skeptical may doubt the efficiency of this contrivance, on the ground that unless a very hot fire is perpetually kept up there will not be heat enough to effect the purpose; but a lea degree of heat kept up for a long time will have the same effect as a greater heat for a short time. In point of fact, the re's means reduced to chare as, which in kindling the fire the next in a simply be thrown upon the fire and altogether.

A New Library Index. The the the the the way of indexing a large library to what

additions are being constantly make it and the greatest with which libraria a base to contend. The card cata gue has been breed for the pearest approach to a whother but a remed invention, originating in the Newterry I dear Chicago, appears to be a great wheaver over the card catalogue. This provides seen that yet a lors with a glass togs standing about broad high, and furnished with a crack limit are 2 hexagonal prisms turning on their axes to one of which a crank is attached. Ar and these and falling almost to the lastice of the last an endless chain made up of high mealing frames with flanged colges into which in he serted cards containing the size at an of the books in the library Landing in the age the glass top, the user sees 4 long pages of saids as ranged in alphabets at order, and he can be

any other pages that he may want. The

of the pages are so linked together that they can be readily unlinked at any point, and additional ones inserted. Short wire projections at the corners of every sixth page slide upon semicircular guides, and cause the slack of the endless chain, or that portion not in immediate use, to arrange itself in a compact and methodical manner within the box, as shown in the illustration. The contrivance is called the Rudolph continuous indexer.

A Wire Flywheel .- A novel flywheel has been constructed recently at the Mannesmann Tube Company's works in Germany. It consists of a cast-iron hub or boss, to which are attached 2 steel-plate disks or cheeks, about 20 feet in diameter. The peripheral space between the disks is filled in with 70 tons of No. 5 steel wire, completely wound around the hub, the tensile resistance thus obtained being found to be far superior to that of any easting.

This huge flywheel is driven at a speed of 240 revolutions a minute, or a peripheral velocity of 2.8 miles a minute, or approximately 250 feet a second. For such a flywheel the length of wire

is estimated at 250 miles.

PEACE SOCIETIES, organizations having for their object the settlement of disputes between nations by arbitration rather than by war. The leading organization of this nature is the International Peace Association. In the United States the general organizations, with many branches, are: The American Peace Society, with headquarters in Boston, and the Universal Peace Union, with headquarters in Philadelphia. The American Peace Society, in 1891, made arrangements for a Peace Conference to be held in Chicago during the Columbian Exposition of 1893. At this conference the following memorial was issued to all the governments of the world, and the Secretary of State sent facsimile copies to them:

The undersigned, citizens of many countries, gathcred at the Columbian Exposition in Chicago, in the United States of America, recognizing the advantages ascruing to those nations which have pursued the policy of arbitrating international disputes, and desiring that like benefits may in the future be enjoyed by all nations, and deeming this opportunity fitting, do here-by join in this memorial to all our various govern-ments, praying that they will unitedly agree, by mutual treaties, to submit for settlement by arbitration all such international questions and disputes as shall fail of satisfactory solution by ordinary and peaceful

The work of the Peace societies received direct I from the Pan-American Conference in April, with a lien these resolutions were adopted:

The to standard by a report of the v. - tagf r/h in detail the

manner in which arbitrators shall be selected and the manner of reaching and declaring their judgments. There is to be no restriction of choice of arbitrators; they may be nations, scientific societies, officials, or private citizens. Unless it is specifically agreed previously that unanimous judgment shall be required, a majority of the arbitrators shall decide the question of issue. Where the arbitrators consist of an even number, each nation may appoint an umpire. Any nation deeming itself interested in or affected by the decision of any question may appoint an arbitrator in the case. It is provided that ratifications of the treaty shall be exchanged at Washington, and it shall be in force for twenty years from the date of its proclamation. After that term has expired the treaty shall remain in force until one year after any nation has given notice to all the other nations party thereto of its desire to withdraw; but the withdrawal of any nation shall not relieve the other nations of their duties under the agreement. The report also recited that "this conference, having recommended arbitration for the settlement of disputes among the republics of America, begs leave to express the wish that controversies between them and the nations of Europe may be settled in the same friendly manner."

Early in 1895 the French Chamber of Deputies voted to ask the Government to negotiate a permanent arbitration treaty with the United States. The House of Commons declared strongly in favor of international arbitration, and in 1893 transmitted the following to the Government of the

United States at Washington:

Resolved, That this House has learned with satisfaction that both houses of the United States Congress have by resolution requested the President to invite from time to time, as fit occasions may arise, negotiations with any government with which the United States have or may have diplomatic relations, to the end that any differences or disputes arising between the two governments which can not be adjusted by diplomatic agency may be referred to arbitration and peaceably adjusted by such means; and that this llouse, cordially sympathizing with the purpose in view, expresses the hope that Her Majesty's Government will lend their ready co-operation to the Government of the United States upon the basis of the forecasing resolution. foregoing resolution.

At a meeting of the American Peace Society, held in Boston, Dec. 24, 1895, to consider the relations of the United States and England as to the boundary dispute in Venezuela, the following was adopted:

War between the United States and Great Britain is a moral impossibility. Neither nation-surely not our nation—can be guilty of the awful crime of attacking the other. Threats of war by the United States are worse than a stupendous blunder. Christianity civilization, humanity, condemn not merely war, but threats of war. Justice between nations is good, especially by the powerful to the weak. Magnanimity inspires our country to seek justice for Venezuela from Great Britain. The Monroe Doctrine means, first, the safety of the United States, and, secondarily, the protection of this hemisphere from European op pression. But our safety is assured beyond question by our power. It is folly to so extend the Monroe Doctrine that boundary disputes of ancient origingrowing out of doubtful documents or data beyond our ken, must imperil the peaceful progress of Christian civilization. What madness to embroil our land

in the constant dissensions of the Spanish and Portuguese and mixed races of South America! Our Government has done well to intervene by honorable diplomatic appeal and protest, including urgent request for arbitration. After diplomacy fails two great he tons must always arbitrate if the quarrel be grevous. The exact Venezuela boundary sinks into insignificance measured against the peace of the English-speaking people. War between them would shake civilization, inflame malignant passions, inflict immeasurable suffering on the masses of both peoples, the millions of workingmen and women, even now struggling hard enough to earn bread for their families. The golden rule condemns war and these threats of war. The rulers of both lands are at fault Both nations must recede. War between two nations of brothers, leaders of the world and Christian civilization, is impossible. We appeal to the Christian conscience and common sense of our people to do all in their power to maintain inviolate the long existing and steadily growing sentiment of amity and peace between the English-speaking nations.

At the last meeting of the Connecticut branch of the Universal Peace Union arrangements were made to erect the second peace temple in the world, the first having been the Temple of Concord, in the Roman Forum. Since 1816 there have been 112 international arbitrations between European nations, the United States, and the states of Central and South America. Nearly all have taken place within the last half century, in which period the United States has arbitrated its contentions thirty times, seven times with Great Britain.

PENNSYLVANIA, a Middle State, one of the original thirteen, ratified the Constitution Dec. 12, 1787; area, 45,215 square miles. The population, according to each decennial census, was 434,373 in 1790; 602,365 in 1800; 810,091 in 1810; 1,047,507 in 1820; 1,348,233 in 1830; 1,724,033 in 1840; 2,311,786 in 1850; 2,906,215 in 1860; 3,521,951 in 1870; 4,282,891 in 1880; and 5,258,014 in 1890. Capital, Harrisburg.

Government.—The following were the State officers during the year: Governor, Daniel H. Hastings; Lieutenant-Governor, Walter Lyon; Secretary of the Commonwealth, Frank Reesler; Secretary of Internal Affairs, Isaac B. Brown, succeeded in May by James W. Latta; Treasurer, Samuel M. Jackson: Auditor General, Ames H. Mylln; Attorney-General, H. C. McGormick; Adjutant General, Thomas J. Stewart; Insurance Commissioner, James H. Lambert; Bank Commissioner, B. F. Gilkeson; Secretary of Agriculture, Thomas J. Edge; Dairy and Food Commissioner, Levi S. Wells; Superintendent of Public Instruction, N. C. Schaeffer; Superintendent of Buildings, John C. Delaney; Chief Justice of the Supreme Court, James P. Sterrett; Associate Justices, Henry Green, Henry W. Williams, James T. Mitchell, J. B. McCollum, John Dean, D. Newlin Fell. The State officers are Republicans, as are all the justices except McCollum, who is a Democrat.

Finances.—The Treasurer's report for the year shows the receipts to have been \$11,746,411.10, and the payments \$13,402,962.90. There was transferred to the sinking fund \$369.371.50. Some of the largest items among the receipts were as follow: Tax on corporation stock and limited partnerships, \$3,537,840.65; on grees receipts of corporations, \$598,548.62; on hank

stock, \$514,074.27 on more \$5.00 sign insurance companies tax. \$513,616.19 on municipal beaus \$2.00 son componition loans, \$522.201.60 spirit projectly, \$2.207.509.32 on ordateral interface \$1.091,903.05 mercantile precises \$5.27.4 wholesale inquier breaks, \$4.55,231.05 distillers breaks, \$15.256.15 distillers breaks, \$15.256.15 distillers breaks, \$4.24.55.26 bottlers likethers, \$124.045.75

Taxes and Valuations.—The amount of taxon collected for the support of the poor was \$1,000,755.00. There was appropriated from the county treasuries for the support of the poor in counties having almohouses \$742.004.00 which makes a total of \$2,006,49.90. The amount collected during the year for the countraction and require of streets, roads, and bridges was \$9.019.192.77.

In the 66 counties making report the common schools have made necessary the levy and collection of \$11,930,507.91. This does not include the amount received by the school districts dis-

rect from the State Treasurer.
The total indebtedness of com-

The total indebtedness of counties is \$62.691.

583.91. Philadelphia's debt is \$53.910.238.58, and that of Allegheny Counts \$3.650.953.77.

Nineteen counties have no debt, 16 increased their debt during the year.

In 1894 the value of all real estate in Pen. estvania was \$2,634,601,500. In 1895 it was \$2,041.

(KIN, NAME

Education,—The report of the Super food ent of Public Instruction for the sear coding June 3, 1855, gives the following figures. Number of schools, 25,348; number of make teachers, 12,600 assesses salary of male teachers per mosth, 444.52 average salary of female teachers per mosth, 791; number of pupils, 1.070.412 transfers wages, \$9.994.629.50 cond. of test books, \$924,305.60; total expenditures, \$12.992.651,12; State appropriation for the school sear ending June, 1894, \$5.484.316.31. There were 807 more schools than in the presenting year at 29,983 more pupils, and the increase in teachers wages amounted to \$305.683.93.

The Complanter Indian Shall at the reservation in Warren County, is after led to 12 Indian and 6 white children at 1 sorts (200) and ally. A class of 20 was graduated at the 4 access

Indian Training -1 -1

The colleges rejecting the largest number of students were. University of Persevisionia, 2,102 in attendance and 480 graduates, thread College, 1918. Lebigh University, 520 students, 114 graduates. Western University of Persevisional, 421 students, 76 graduates, Dick us in College, 326 students, 28 graduates, Lafayette Unlege, 111 students, 48 graduates.

Its a decision given in April in a school case at Waverlet the reading of the Ribble in the public which of Pennesivania was practically declared illegal. In his opinion the public that denominational religious everyless a struction in sectarian decrines in our system.

common-school education are expressly prohib-

ited by the Constitution.

The religious-garb bill has had the effect of excluding the sisters from the ranks of public-school teachers; in some instances the children whom they formerly taught have also been withdrawn from the schools.

The State Superintendent reports that the freetext-book law has given great satisfaction. A noticeable effect is seen in the increased attendance, amounting, in some instances, to 30 per

cent

Banks.—The report of the Bank Commissioner shows the condition of 187 institutions, exclusive of building and loan associations—the report of which was to come later—for 1895. The deposits aggregated \$41,915,517.71; savings institutions, \$73,937,638,28; trust companies, \$103,-114,827,73; total, \$218,967,983,72; increase in 1895 over 1894, \$14,043,926,12. The banks reporting to the department had a reserve fund in 1895 of \$8,442,384,48; savings institutions, \$6,-375,362,77; trust companies, \$20,450,665,49; total, \$35,268,412,74. The report shows that there was a decrease of \$2,713,586,68 in the reserve fund of these institutions in 1895.

The number of deposit accounts in banks in 1895 was 109,233; savings institutions, 282,677; trust companies, 112,648; total, 504,558. The average to each depositor in all institutions was

\$433,94,

Railroads.—The report of the Secretary of Internal Affairs for the year ending June 30 shows that the total amount of stock of railroads operating in Pennsylvania is \$1,099,303,383.42, and the capital stock outstanding \$944,670,893.64. In 1894 the bonded indebtedness was \$982,551,341.93, an increase in five years of \$101,961,832.21.

There was expended \$16,359,034,76 in the equipment, improvement of roads, and construction. The total cost of roads and equipment, as reported to the department, is \$1,538,501,235.29.

There were 1,538 persons killed and 10,607 injured by the steam railroads operating in the State. Twenty-nine of those killed were passen-

gers

The United States Supreme Court affirmed, in May, the constitutionality and validity of the Pennsylvania statute of 1879 assessing the tax of eight tenths of 1 per cent, upon the gross rescapts of railroad companies for tolls and

transportation.

The Amalgamated Association of Railway Entrovees decided, Dec. 16, to declare a strike upon the lines of the Union Traction Company in Providelphia; their demands were for a size day of ten hours, \$2 a day, and the restriction of the Amalgamated Association of Rangay Employees. The strike lasted as a first were rioting and bloodshed in of property, but no lives were incompany's terms. The size was settled, Dec. 23, by the size was settled, Dec. 23, by the size was settled, Dec. 24, by the size of the agreement, to with the old employees who have a settled that the size was salmost entirely strictions of the settlement.

two years' and one to eighteen months' impris-

The Supreme Court decided in March in a case involving the rights of trolley companies that the street-railway act gives no right of eminent domain, and that, as the trolley lines are incorporated under that act, they have no power to construct their road, where the taking of property is incident or necessary to it, without the consent of the property owners.

Insurance.—The report of the Insurance Commissioner for 1894 was published in September. The life companies of the State issued 4,637 policies, insuring \$11,033,303, an increase over the business of the preceding year of 335 policies and a decrease of \$250,531 insurance. The companies of other States issued 751,180 policies in Pennsylvania, insuring \$165,453,269. The expenditures of Pennsylvania companies in 1894 were \$7,914,311.62, of which \$5,706,427.61 was paid to policyholders.

The report of the joint-stock fire and marine insurance companies of the State shows that there were 38 in 1894; assets, \$42,305,059; liabilities, except capital, \$21,398,170; capital, \$12,052,875; surplus, \$8,855,492; premiums received, \$16,393,262; total income, \$18,296,378; losses paid, \$10,681,144; total expenditures, \$17,496,524; dividends, \$1,157,365; risks in

force, \$2,014,562,684.

There was a uniform decrease in fire, marine, and inland risks written, in premiums received, and in fire losses paid. The premiums received by stock companies during the year were \$10,-332,492, and the premiums and assessments of mutual companies were \$1,391,096. The losses paid by stock companies were \$5,355,109, and the losses paid by mutual companies were \$1,045,-713.

Forest Fires.—The report of the Forestry Commissioner shows that during the year 225,000 acres of woodland were burned over, causing a loss of timber aggregating fully \$1,000,000. Many fences were destroyed by these fires, and 5,000 men were engaged a total of about two hundred and fifty days in extinguishing the flames. The men received for their work in the aggregate \$45,000. Twenty buildings were destroyed by forest fires.

Monuments.—The anniversary of the battle of Brandywine was celebrated Sept. 11 at the old Birmingham Friends' Meetinghouse, the principal point of the battlefield, by the unveiling and dedication of a tablet to Lafayette and a granite monument to Col. Joseph McClellan. The monument was built by Col. McClellan's descendants and the Lafayette testimonial came from the Chester County Historical Society.

A monument creeted near Taylorsville to mark the spot where Washington crossed the Delaware river before the battle of Trenton was dedicated Oct. 8 by the Bucks County His-

torical Society.

Legislative Session.—This extended from Jan. 2 to June 8. Senator Thomas was president pro tem. of the Senate, and Representative Walton Speaker of the House. About 1,200 bills were introduced, of which 587 went to the Governor and 489 were approved. There were 68 resolutions passed.

One measure that became a law was called

Greater Pittsburg" bill. When at least per cent. of the qualified electors petition Court of Common Pleas in favor of the anration of one city of the second class to ther, the court must order an election to be seld, and if a majority of each city votes in server the annexation shall take place.

For the relief of the Supreme Court in the

creasing pressure of business bills were intro-sed providing for 2 more judges and creats court of intermediate appeal, to be called Superior Court, with a membership of 7, ther bill called for 3 more judges of the

rt of Common Pleas, he Marshall bill, repealing the law of 1883, prohibited the consolidation of competing line companies, was passed in the face of opposition from western Pennsylvania. A ar bill was passed in 1893, but was vetoed

the Governor.

of the measures that attracted most atn was that called the "garb bill," which is a law. It prohibits the wearing by pubool teachers of any religious mark, dress, insignia in the schoolroom. In its first it made such wearing a misdemeanor on part of the teacher; but as finally passed it d a penalty upon the school official consing to employ the teacher—a fine for the first and for the second loss of office and ligibility for five years. The teacher is to be ded for one year for the first offense, and manently disqualified after the second. Proere made against the bill in the interest Mennonites and Dunkards, of whom there 80,000 or more in the State, and who wear a uliar dress, and in that of the order of the ters of St. Joseph, who are employed in some ble schools. In 1894 an injunction had been led for, but was denied, to prevent sisters teaching in the garb of their order in the district of Gallitizinborough. The Junior r of American Mechanics was especially acn pushing the bill. bill for compulsory education was passed.

iding that all children between the ages of t and thirteen shall attend school at least

s in each year.

A new judicial apportionment increased the moor of judges of common pleas and of the phans' Court,

The following relating to educational matters icted providing for the establishment of ablic libraries in school districts except of the first and second class; to reguthe establishment, classification, and main-

of high schools.

A Banking Department was created, the chief to be a commissioner of banking, apinted by the Governor for a term of four are, at a salary of \$6,000. The duties and were of the Auditor General in regard to suon and regulation of banks and kindred ations are transferred to this department.

Department of Agriculture was created, secretary, deputy secretary, economic ist, commissioner of forestry, dairy and commissioner, and State veterinarian.

ases were made in the salaries of State cials and employees, and by these and the ation of new offices the addition to State disbursements is stated as being \$250,000 vent As an offset to the increase of expresses as that Banking Department there is a provious in the bill reorganizing the department, which carries with it a operial tax upon the inetitudente under the control of the department. It is believed that this tax will produce enough revenue to make the State the gamer.

The appropriation for the Department of Agriculture was \$9,000 less than in 1863, and that for the care of public buildings and grounds about \$15,000 less. The Governor vetored a poten vision for \$6,000 for payment of expenses of the State Weather-Service Bureau, compilering its continuance unnecessary. An appropriation of \$12,000 for expenses of a Senate committee in settling a disputed election case was also vetoed, breause it was excessive and med itemiand. Another item of \$8,000 for the payment of the expenses of the joint legislative committee to investigate the question of convict labor and to what extent it interferes with the legitimate in-dustries of the Commonwealth was disapproved because the amount was excessive and the purpose would not warrant the exprediture. appropriations were reduced in all from about \$23,000,000 to about \$21,500,000 before they left the Governor's hands,

Appropriations of \$260,000 were made by the Legislature to the State normal schools. It was announced that the Governor intended to veto it, and the veto was filed in the cone of the secretary. In a short time the executive was overwhelmed with communications from the managers of these institutions informing him that to refuse the appropriation at this time would be disastrous to the schools. This was a surprise to the Governor, and he notified the managers of the schools by telegraph that if they would agree not to draw more than 50 per cent, of the appropriations until the end of the fiscal year June 1, 1897, and the remainder afterward, he perhaps could give his approval. This proposition was accepted, and two days later he withdrew the veto and approved the ball. question then arose whether this action was legal. As the Legislature had already adjourned, the bill could not be passed again.

Among other acts of the session were these;

Authorizing boroughs to redeem curistanding bounds and for that purpose leave and sell new inderest bearing bonds, and to provide a fund for the redeseguism. thereof.

For the protection of terrmen curp in the public

lakes and streams

Making dying declarations computent in prin tions for crimical abortion and attempted abortion, where the subject shall die in communication of much unlawful acts.

Authoriting the cities to appropriate private property for public parks. Prevening that turne but citizens of the United

States shall be employed on public work.

To define who shall be responsible for the minimum tenance of patients placed in insume hospitals by

course and judges

Dividing the cities of the State into 8 classes with respect to their population, and designating the emids of accertaining and changing the classification there. of in accordance therewith.

To example sewing machines and type-writing machines leased or bired from levy or sale on a necu-

the or distress for rent.

Making a uniform season in Huntingdon County for kiding deer from Dec. 15 to Oct. 15, and squirrels from Jan 1 to Oct. 15.

Regulating the construction and ventilation of

tenement houses.

Making it a misdemeanor punishable by a fine of \$100 or imprisonment not exceeding one year willfully

or wantonly to raise a false alarm of fire.

Alsolusing the law of 1772 by striking out the provision requiring the kissing of the Bible in the

administration of oaths so that hereafter all swearing will have to be done with the uplifted hand or the laying of the hand on the open book.

l'unishing peol selling, the receiving or transmitting of bets by telegraph, or aiding in pool selling or

Bettitie Relating to and regulating the issue and transfer of

certificates of stock by companies.

Legalizing the dehorning of cattle. To honor the United States flag as the national emblem of a free people and to protect it from foreign and domestic insult.

Defining the crime of train robbery and punishing

To prohibit exhibitions of physical or mental de-

formities in certain public places.

To prevent the interference of unauthorized persons with the electrical conductors and electrical appliances and machinery of companies using, generating, or supplying electricity for light, heat, and power.

Amending the divorce law so as to include indignities to the person of the husband.

Conferring upon municipalties the right of eminent

domain for the purpose of appropriating public property for the use of the National Guard.

To regulate the advertising of sales by county commissioners of land bought by them for nonpayment of taxes.

Appropriating \$5,000 for a monument to the Phila-delphia brigade at Antietam.

Some important measures defeated were bills for congressional, senatorial, and legislative apportionment, on which the 2 factions of the Republican party were opposed to each other. The Quay faction was against the measure, and defeated it with the aid of the majority of the Democrats.

There were various attempts to amend the

ballot law, but these also failed.

A commission was created to ascertain the best methods of utilizing convict labor in the institutions of Pennsylvania so as not to interfere with legitimate industries. Resolutions were passed for the appointment of a joint com-mittee of the House and Senate and 2 disinterested persons to investigate the State institutions to ascertain how many of their inmates are aliens; another to investigate the public and nermal schools, and committees to investigate the management of the insane asylums,

Political.-An election was held in Novemher for a State Treasurer and judges for the I miles during the year was mainly confined to the translations in the 2 great par-E ter E. Wright was elected chairman Alle Side Democratic Committee in place of Charte, at. Stat shan. Senator Quay was chosen (Un core) of the Republican State Committee in 1 3 v ' B. F. G . seen, and the 2 factions apparer the ware thegether in harmony thereafter. G v. H ver gaves made chairman of the Repubhear State Committee at Harrisburg Aug. 28. Por State Indianer Benjamin J. Haywood was nominated, and for Superior Court judges the

6 Republicans appointed by the Governor after the passage of the act—E. N. Willard, Charles E. Rice, James A. Beaver, John J. Wickham, Howard J. Reeder, and George B. Orlady.

The platform declared against free coinage of silver and in favor of protective duties, and charged the Democratic party with bringing on the panic of 1893 and the deficit in the national Treasury. The following resolution also was adopted:

We demand that public office should be for the We demand that public office should be for the public benefit, and its term in subordinate positions should be during good behavior. No public employee or officer should be permitted to influence primaries or elections, nor upon any pretense to be assessed upon his salary, and all unnecessary positions should be abolished and expenditures reduced. There should be a uniform basis of valuation of property for public purposes. Corporations enjoying public privileges should pay for them, and schools be divorced from polities and kept absolutely free from political influence and control.

The Democratic Convention was held in Williamsport Sept. 11. Benjamin F. Meyers was made the candidate for State Treasurer. For the judicial nominations the following were chosen: Harman Yerkes, James S. Moorehead, Peter P. Smith, Charles N. Noyes, Oliver P. Bechtel, Christopher Magee. The platform contained the following:

We especially invite the sober consideration of the people of this State to the remarkable factional struggle in the Republican party, a struggle which in-volved no principle or public policy, but simply the supremacy of factional leaders. The worst arraignsupremacy of factional leaders. The worst attachment at our hands of Republican misrule falls short of what representative Republican newspapers and leaders testified of each other. The admitted prostitution of the public service, the intervention of corporations of the public service, the intervention of corporations and the missue of indicial appointments. and the consequent prostitution of the judiciary, the corrupt use of money in the purchase of delegates, the attempted terrorism at Harrisburg by men of the most abandoned type, fix the high-water mark of political debauchery. It but needed to complete its incomplete infamy the transparent hypocrisy which led a convention thus constituted to adopt "with laughter" resolutions concerning the very methods by which its delegates had been selected.

The Prohibitionists met in Pittsburg June 5, and made nominations, as did also the People's

and the Socialist-Labor parties.

The result of the election in November gave the Republicans the State Treasurer and 6 judge ships, the seventh going to the Democratic candidate having the highest number of votes, as provided by the law establishing the court. This was Peter P. Smith, who received 285,882 votes. The vote for Treasurer was: Haywood, Republican, 456,745; Meyers, Democrat, 282,-481; Berry, Prohibitionist, 20,779; Dawson, Populist, 7,802; Anton, Socialist-Labor party candidate, 1,329,

PERSIA, an empire in central Asia. The Government is an absolute monarchy based on the laws of the Koran, and hereditary in the Shiite dynasty of the Kajars. The reigning Shah is Nasreddin, born July 18, 1831. The heir presumptive is Muzaffereddin, born March

25, 1853.

The revenue for 1895 was estimated at \$6,-300,000. A debt of £500,000 sterling was contracted in 1892 to pay an indemnity for the PERU.

tobacco régie that was farmed out to a foreign company and afterward canceled. This English loan is secured by the customs receipts of southern Persia, and pays 6 per cent, interest.

The Persian army numbers 54,700 infantry, 55,000 cavalry, 7,200 militia, and 5,000 artillery. The number of troops kept under arms is about 24,500.

The imports are estimated at \$26,400,000 a rear, and the exports at \$15,600,000. The chief mports are cotton cloth, glass, paper, woolens, ctroleum, sugar, iron, copper, coffee, and tea. hells, carpets, dried fruits, cotton fabrics, rice, wool, tobacco, arms, guns, cotton, drugs, and tarquoises. The export of opium is about 10,boxes, valued at \$3,750,000, sent to Europe remedicine and to China for smoking. The sport of silk is about 400,000 pounds; of toseco, 12,000,000 pounds; of cotton, 10,000,000 pounds; of wool, 7,700,000 pounds. The exports of carpets are about \$740,000 in value.

PERU, a republic in South America. The gislative power is vested in a Congress consistg of a Senate, containing 48 members, and a House of Representatives, containing 109, elected for nine years by indirect suffrage. The right to vote is restricted to male Peruvians twentye years of age able to read and write, and cither taxpayers, masters of a trade, owners of property, or heads of families. The President is ted by the vote of the nation for four years. The President in power at the capital at the beginning of 1895 was Gen. Andres A. Caceres, inogurated on Aug. 10, 1894, whose election was

The republic is 463,737 square miles in extent, with a population now estimated at 3,200,000, exclusive of 350,000 uncivilized Indians. regular army numbers 2,400 infantry, 1,100 cav-slry and artillery, and 2,400 gendarmes. The state railroads have a total length of 800 miles, and there are 1,408 miles of telegraph.

the cause of a civil war.

Finances.—The revenue is mainly derived om customs. The foreign debt is £32,000,000, for which and £23,000,000 of defaulted interest new bonds have been issued, secured in the railroads, mines, guano deposits, and lands administered by the Peruvian Company of Lendon. The internal debt amounts to 31,572,500 soles, paying 1 per cent, and quoted at 44 per cent, of the nominal value. The paper money is no longer legal tender, but is redeemable in internal bonds at the rate of 1 sole for 15 soles of paper

The Civil War,—When President Bermudez died suddenly on March 31, 1894, the second Vice-President, Justiniano Borgoño, an adherent of ex-President Caceres, who had placed Bermudez in the presidency and planned to succeed him, took possession of the Government, having the army behind him, while the first Vice-Presideut, Dr. del Solar, a partisan of ex-President Pierola, withdrew to Arica, in the provinces is ied by Chili, and nominated a rival adminis-Caceres had himself proclaimed I'revisional President in May, and went through the form of being elected by Congress in August. 1804. Meanwhile the exiled Pierola returned to Peru and headed a rebellion. His cause gained rapid headway in the north and the

south, while he required to the center at a range an army for the siege of Lima, the cap a.

In the beginning of 1806 the tweeters at capital were in sore need of money and relief equipped forces they could not count upon the loyalty of their trange. President t savres was authorized by Congress to issue tarids, but there were few purchasers, even at 75 per cent diecount. He made primoners of all the rich ceti-zens of Lima who declined to subscribe, but some set most of them free. The increase in the palitical arrests showed that the Portulat cause was gaining ground at the capital, so it was in other parts of the country. The insurgents virtually held the northern provinces, and were in full peacession of the center. They occupied sereral of the coast towns. Their bands were active in the vicinity of Lima. They could draw supplies from most of the productive distructa-At the end of January they gained personnics of Arequipa, the most important inland town in the south. The justice of their contents o that Caceres was a usurper, whose pretended election was entirely irregular, and that the constitu-tional executive chief, until a lawful election could be had, was Pedro A. del Soler, appealed forcibly to believers in legality everywhere. Caceres lost so many of his soldiers by describes that he impressed unwilling peops into the service. To raise money an excess duty of I sends a kilo on sugar was decreed on Feb. 12. A f eve that was went to bembard and recogdury Arequipa was compelled to give up the attempt. Some of the moderate Cacernte called a conference with the intention of requesting the Pressdent to resign in order to avert blessished and the possible sacking of the capital, but he prohibited the meeting. In the middle of February Pierola drew his lines closer about Lama and its seaport. For months he had been draining the mountaineers for the attack upon the city They were the best material for soldiers in Fora, and they were devided to him, as he was a commander in whose abilities the men had faith and who was always with them, inspering confidence and winning their affection by sharing their privations and dangers. Carerro premised his deout to meet Pierola, Pault, and Purson, but he was afraid to do so lest his forced les me should go over to the enems in front and the res totionists gain the upper hand in Lime and fall upon his rear. North of Lima, in Poisa, the Covernment and the reled forces were escale balanced, and farther woth, while Cojamiarea was held by the resulutioneds, and Careers held the force of Toulors Sommario in chert in the neigh-Inches alof thiclas . Nearer the center Huntes and the ports of Huacho and Supe were held by old of Lima and Callan, which were practically learnered by Pierula from the beginning of Januars, although the tovernment forces were as strong numerically as his own, each army numbering about 6,000 South of Lima the theoremment troops were kept constantly merthat place all was lest to the Government. In Puno and Majuegua the Pierolists were rece to? with open arms by the population, as the t had

646 PERU.

been in Arequipa. When the regular siege of Lima began, on Feb. 19, the Government troops erected fortifications and planted guns. The attack was not made till March 17. The revolutionary troops advanced simultaneously in the night from various points. Favored by a fog, one division passed the Cacerist lines unobserved and penetrated to the center of the city, occupying the church towers and other commanding institions and continuing to advance until a line of communications was formed with the divi-sion that entered the city from the opposite Another division under Col. Pauli outflanked the Cacerist forces and occupied the towers of the Merce I church. Pierola had 2,000 riflemen strongly posted at many points before it was light enough to see or be seen by The battle in the streets began the enemy. in the dark and raged till night fell. Outside the city other Pierolist forces engaged the troops that held the fortified positions. The fighting was resumed on March 18 at five o'clock in the morning and kept up till night, and on March 19 firing began again at dawn and was kept up till noon in a weak and desultory fashion, for the contending forces were reduced to a fraction of their original numbers and all who were left were physically exhausted. The Cacerists were thoroughly demoralized, for they were fired upon by citizens from their houses, partisans of Pierola who had kept arms concealed in spite of po-lice searches. Drunken and barbarous from the first, and now despairing of the battle, they began on the third day to loot the stores and clubs and the houses of the wealthy into which they could force an entrance. The Government forces still held the plaza, the palace, and the fort of Santa Catalina. The Pierolists, still 2,000 strong, were prepared to continue the combat and to burn with petroleum or level with dynamite all obstacles to their progress. The leaders, however, having already won the victory, willingly agreed to an armistice of twenty-four hours when the diplomatic corps intervened to prevent needless carnage and destruction and the pestilence that the putrefying corpses of men and horses threatened to bring upon the city. Before the armistice expired a peace was arranged through the mediation of the papal delegate.

The articles were signed on March 21 by Dr.

The articles were signed on March 21 by Dr. Luis Felipe Villavan, representing Gen. Caceres, and Enrique Bustamente y Salazar, in behalf of Nicolas Pierola, the terms being that Caceres should resign the presidency and retire to Ancesta, and Pierola lay down the command of his army and withdraw to Chorillos, while a Provincial Government should be formed, consisting of 5 men, 2 to be nominated by Caceres, 2 for Parala, and the fifth selected by the others of minaco of disagreement, by lot. The Provincial Government was to keep its powers no last a state of the cacerola.

Although the marsher engaged on both sides did not cost \$1000, the number of men slain or marsher weight in the two-days' battle was 1.875, and 1.751 were less severely wounded. The Government treats lest more than double the number that the revolutionary forces did, owing to the hestality of the people. In accord-

ance with the stipulation both armies withdrew from the city to camps outside. An urban guard of 2,000 men was organized to preserve order, composed largely of foreigners.

order, composed largely of foreigners,
The Election of Pierola.—The Provisional Government was composed of Manuel Candamo. Ricardo W. Espinosa, Luis Felipe Villaran, Enrique Bustamente v Salazar, and Elias Malpartida. The military ranks granted up to date in either army were confirmed, according to the agreement, but the reorganization of the army was left to the coming Congress. The troops of Carceres received some pay from money advanced to the Provisional Government by the banks and were disbanded. Gen. Carceres did not go to the retreat assigned to him, but took refuge on a French war vessel at Callao, and was afterward conveyed away by a British manof-war. The political prisoners that were starving in the jails of Lima and Callao were released immediately. The authorities took possession of all arms and ammunition. In the south, Gen. Mas, in the district of Cuzco, and the Cacerist commanders at Pisco and other places still refused to recognize the Provisional Government, but they made their submission before a month passed by. Gen. Mas, who had 2,000 men, remained defiant until after Gen. Pierola, who landed at Mollendo with artillery and cavalry for the purpose of chastising him, had a sharp battle with him for the possession of Cuzco. Import duties on iron, coal, and machinery, and export duties on cotton, India rubber, pitch, hides, cotton seed, sugar, and tobacco, which the Cacerist Government had imposed, were repealed.

Elections took place on July 7, but Pierola objected on account of some irregularity, and new ones were held on July 26, when the same candidates were re-elected. Nicolas Pierola was elected President without opposition for the term ending Aug. 12, 1899. The new Viceterm ending Aug. 12, 1899. The new Vice-Presidents are Guillermo Billinghurst and Augusto Seminario y Vascones. The new Government had to render satisfaction for the arrest, by Caceres, of a British vice-consul who would not subscribe to a forced loan, and to the German and Spanish governments for similar outrages committed upon their subjects by Gen. Mas in Cuzco. While the Provisional Govern-ment was still in authority some American Protestant missionaries went to Cuzeo, causing great excitement and indignation among the people, and the local authorities finally expelled them in spite of the decision of Minister Candamo that Protestant worship was protected and that they had equal rights with Catholics. Bolivia demanded that her flag be saluted for a violation of her territory during the civil war, but the Peruvians resented this demand and the Government temporized and finally agreed to submit the question to the arbitration of some other American state.

President Pierola was inaugurated duly on Aug. 12, and on Sept. 9, after the assembling of the new Congress, which met on Aug. 30, he appointed the following Cabinet: Premier and Minister of the Interior, Antonio Bentin; Minister of Finance, F. Bresani; Minister of Foreign Affairs, Meliton Porras; Minister of Justice and Worship, A. Albarracin: Minister of War and Marine, Col. D. J. Parra. On Dec. 1 a new Cabinet was formed, composed as follows: Premier and Minister of Justice, Señor Barrinaja; Minister of Foreign Affairs, Ortiz Zevallos; Minister of Finance, Señor Obin; Minis-

ter of War, Col. Ibarra.

PHYSICS, PROGRESS OF, IN 1895. Constitution of Matter, etc. Molecules. Stoney (London Royal Society, May 16) thinks that events go on within the molecules of matter that are so sluggish in affecting its pressure or temperature that only after millions of encounters does any manifestation of loss of energy by conduction become appreciable; while the same events act promptly and actively in other ways, as in chemical action or radiation. These events are those internal motions of the molecule in which during encounters there is some exchange of energy with the external or translational motions, but not a ready and quick exchange, while the same molecules may pevertheless exchange energy promptly and quickly with the ether by radiation. The author adds that electrons, for the most part associated with this class of motions, appear to be primarily concerned in every chemical reaction and in all the phenomena of radiation. Sutherland (" Philcoophical Magazine," January), in an article on the laws of molecular force, demonstrates that the expression mal, which occurs in the treatment of the attractions of like molecules, can be analyzed into two factors, which are the sum of numbers characteristic of the atoms composing the molecule, whose mass (referred to the atom of hydrogen) is m. This would analyze mo-lecular into atomic attraction. Belief regarding the change of molecular structure with time in certain solids has caused some people to fear that no permanent standard of length can be made, but Rogers (American Association, 1895), as a result of comparisons that extend over five years, concludes that such fears are not well

Mechanics. Absoluteness of Rotation.— Mach, in his "Science of Mechanics," does not accept Newton's distinction between the relative ity of motion of translation and the absoluteness of motion of rotation. A review of the work by Greenhill in "Nature," Nov. 15, 1894, has been the cause of wide discussion among mathematicians and physicists, from which it appears that many authorities consider that rotation as well as translation is only relative.

Energy. - Helm (Wiedemann's "Annalen," June), in a "Survey of the Present Position of Energetics," states that the two views of energy that are now struggling for supremacy are that which regards it as a mathematical abstraction and that which considers it to be a concrete reality, filling space and migrating continuously from place to place. One of the chief generalizations of energetics, according to this writer, is the following: "In order that something may happen it is sufficient and necessary that uncompensated differences of intensity exist Allen (London Physical Society, March Sphas mathematically investigated the motion of what he calls "energy cells," which are the small volumes bounded by the walls of a tube of force and by the two neighboring equipotential aurfaces. This motion differs according as the

charged or gravitating parts :
rate. Mr. Allen calculates what to a :
ergy density in the medium at the :
face, and find it equal to 10 house; with the part cubic centimetre.

Elasticity Fram: Wiedermann's Annae has measured the elasticity of solid grains solutions, and finds that in no case does the same change by stretching Part of the valer could be replaced by glycerin came sugar or gum arabic suthout making any difference but common salt impaired both the clusterity and

the strength of the gelatin starks

Kinematics of Machines - Hearton I leveles Reyal Society, May 16; obour that all machine movements, however complex, may be derived from a limited number of simple moth en. By attaching to each kind of simple medica a saggestive symbol any complex machine medical may be exhibited by a graphic formula. Thus the turning motion of consecutive passes when one revolves completely about the other is represented by the letter (), and swinging medium, when one turns through a limited angle relatively to the other, by the letter ! metrical limitations of the combinations of such motions are shown to be such that only 14 dastinct types of these are possible. The author classifies all simple machine movements as fellows: 1, Plane mechanisms, where the possess move in or parallel to a plane, 2 spherical mechanisms; 3, cylindrical mechanisms; 4 comoidal mechanisms, where the axes of the swinging and turning motions neither meet toe are parallel.

System of Pradulums.—A system of 2 regular pendulums joined by an clastic thread has been studied by L. de la Rive ("Journal de Physique"), who finds that energy is persodically transmitted from one pendulum to the other. The period of this phenomenon equals the codinary period of oscillation multiplied by a number that is proportional directly to the length and inversely to the section of the thread. After 10 or 12 periods the alternation of periods is scarcely perceptible, and in the end the pendulums tend to move like a right system.

with constant tension of thread

Leastions's Curres. Owing CZentwhrift the den Physikalischen Untermeht "I uses for the production of these curves 2 small mirrors attached respectively to vertical and bettermial stretched wires, the period being adjusted by screws carrying nuts meanted behind the mirror

at right angles to the wire.

Liquida Capallarity - Van der Mercia brugglie Paris Academi of Scarner, Sept. 300 finds that the great therefore of capillarity agrees but imperfectly with the facts that are chinered in conjectation. Most legame evagestate equalapromply it, air, betwee (1) The demote of the oupertinal laver must do trans outward contrars to tiation a and Laplace a threeten, 12 the mann of liquid has not an invariable volume, eventrary to I' can to a thrown ; and I the experternal later lang continually renewed to ned in equilibrium. contrary to the theories of most contemporary attained. The author has elaborated a theory which he regards as free from these objects of E. Kaiser (Wiedemann's "Annalen," Drev 1894 has studied the mingling of mason

liquid by observing the Newton's rings that Difference of potential form between films. hastens the mingling, and Kaiser's experiments show that it does so by increasing the pressure on the intervening air, forcing it out at the sides. With the films that he investigated fusion took place in 32 seconds with no potential difference, in 14 second with one Daniell cell, and in 0.4 second with 2. With more cells, fusion took place instantly and the films usually burst. Maltezos (Paris Academy of Science, Aug. 5), after a study of the so-called Brownian movement of small particles in a liquid, concludes that it is a capillary phenomenon. Quincke (Wiedemann's "Annalen," December, 1894) calls attention to the fact that the forms assumed by combinations of alkalies with oleic acid when brought into contact with water have a remarkable analogy with the configuration of various small portions of the stellar universe, such as portions of Orion, Virgo, and Coma Be-

Critical Point.—Pietet (Berlin Physical Society, Feb. 22) is of the opinion that substances must still be in the fluid state at the critical point, for the amount of heat that must be put into the substance, reckoning from absolute zero is less than the latent heat of the liquid, and solid bodies do not separate from solution at the critical temperature, but do so on a further rise

of temperature.

Evaporation.—Lehfeldt ("Philosophical Magazine," November) has deduced from thermodynamic considerations a formula representing the relation between the composition of a mixed liquid and that of the vapor that rises from it. This formula agrees reasonably well with experiment, though new data seem to be needed.

Condensation.—Wilson (Cambridge Philosophical Society, May 13) finds that in dust-free air there is still condensation into a cloud of fine drops after the expansion exceeds a certain critical amount, which point remains constant, no matter how many expansions are made. The ratio of final to initial volume at this critical expansion is 1258, when the initial temperature is 16.7 C., corresponding to a fall

of temperature of 26.

Solution.-Linder and Picton concluded several years ago that there is no definite line to be drawn between suspension and perfect solution. the difference being only one of degree of aggregation. They have now ("Journal of the Chemical >= icty," February) strengthened their conconstantly finding that a mixture of a 2-per-cent. are sponsored solution with hydrogen-sulphide water is not only diffusible, but can be fiftered the sheap porous pot. Four grades of such a life first contains aggregates that can la second is inby my diffusible, the third diffusible the roll, and the fourth both diffusithough it scatters and polar-though though it scatters and polar-though though the Boarbandran (Paris Acade-though the Boarbandran (Paris Acade-though the Boarbandran (Paris Acadesale 'year to a continuous series of which the melaters at the coal may dilate on solution while the at the other new contract. Crismer "Balletin de . A vienne Royale de Belgique," No. 6; and that the critical temperature of solution is independent of the amount of either hody present. It varies much from one body to another, but is constant for the same body, and for a mixture is sensibly equal to the arithmetical mean of those of the constituents. The surface tension of the lower of two liquids tends toward zero at this temperature and the separation meniscus becomes a plane, hence the temperature may be determined by an optical method. Arctowski (ibid.), by determining the solubility at very low temperatures of some organic compounds in carbon disulphide, finds that the point of fusion of the solvent appears not to be an essential point on the curve of solubilities, as supposed by Etard.

Crystallization.—Lecoq de Boisbaudran (Paris Academy of Science, April 22) shows that crystals may form at the bottom of a solution of greater specific gravity than themselves, the action depending on small variations of temperature. Baudrowski ("Zeitschrift für physikalische Chemie," November, 1894) has examined the light that certain salts emit during crystallization, and concludes that it is probably electrical, being due to the union of electrified

ions.

Gases. Hygrometry.—A hygrometer based on a new principle is suggested by Dr. J. Verschaffelt ("Bulletin of the Belgian Royal Academy," Nos. 9 and 10). The hygrometric state of the atmosphere may be taken as the ratio of the vapor tension inside a solution to the highest possible vapor tension of water at the same tension, when the solution is neither evaporating nor condensing water from the air. Thus by moistening a weighed piece of blotting paper with a weighed quantity of a solution of a salt of known concentration, exposing to the air, and weighing again, the "equilibrium concentration," and hence the humidity, may be calculated.

Kinetic Theory.—Fitzgerald (London Royal Society, Feb. 7) has attempted to show that Maxwell's theorem of the equal partition of energy among the degrees of freedom of atoms is not, as has been generally held, inconsistent with the various internal movements indicated by gaseous spectra. This is due to the control exercised over the motion of the electrons on neighboring atoms by the intervening ether, so that if, say, 106 atoms are thus connected, the motions of their electrons might be defined by '3 co-ordinates, and "if the atoms were spheres there would be 3×106 degrees of freedom plus the 3 degrees that define the motion of the electrons. Now, if the total energy be equally distributed among all these degrees of freedom, each atom will have only its share of the electro-motions, and its energy of external motion will only be diminished by 3×10^{-6} part owing to the existence of the internal motion of its electrons." Our calorimetric methods are not sufficiently delicate to detect this diminution. Liveing and Dewar (Paris Academy of Science, July 15) find that observation of the spectra of liquid air and oxygen do not bear out the theory that the increase of intensity of the bands as the square of the density of oxygen is due to the encounters of molecules of ordinary mass, which are more frequent as their free path is diminished. Mixtures of liquid air and oxygen

confirm the law of increase at low temperatures, solid air shows practically the same character and intensity of absorption as liquid air. A thickness of 0.4 centimetre of liquid oxygen gives a much greater band intensity than 19 contimetre of liquid air.

Viscosity.- It has been noticed several times at the viscosity of a mixture of gases is greater mponents. Thus the addition of a little hyen to carbon dioxide makes it more viscous. though the former gas is less viscous than the The theory of this action has been worked mathematically for the first time by Sutherd (*Philosophical Magazine," November), finds it to depend on the difference of of the molecules of the mixed gases.

oustics Combinational Tones,-Rucker d Edser (London Physical Society, March 22) that under certain conditions difference summation tones are capable of disturbing onating bodies, and they regard this as seting the vexed question of the objective or subtive nature of these tones. In one case the conator was a tuning fork whose vibration was ctometer. Dr. Burton, at the same meeting. cribed experiments with two organ pipes, owing that their combination tones varied ith the relative distance of the pipes, the obrer remaining at the same distance-a fact t argues for the objectivity of the tones.

Comparison of Forks.—Hallock (American sociation, 1895) has devised a photographic thod of comparing the pitch of tuning forks clamping each fork before a manometric capbowing it, photographing the flames, and neounting the relative number of vibrations.

Vibration of a String .- Cornu (Paris Acadny of Science, Aug. 5) finds that the transverse ration of a string, no matter how it is exed, is always accompanied by torsional viations. The actual vibration is complicated t only by this fact, but also by the usual want

rmmetry of the strings about their axes.

Heat. Calorimetry.—Waterman ("Philosoph-Magazine," November) has devised a calooter that is maintained at a constant temperaafter the introduction of the heated body cans of cold water, instead of allowing it to in temperature and measuring that rise. is gets rid of the radiation error and elimihe "water equivalent" of the vessel. ter is dropped in from an inverted copper cone ounded by ice. For bodies of the same ght and the same initial temperature the speeat is measured simply by the amount of cold water necessary to cool them to the temature of the room.

Conduction. — Quick, Child, and Lanphear Physical Review," July-August) find that the al conductivity of copper varies from 0421 -34° to 1.059 at 13°, but the increase is more sid for the temperatures below zero. The avthan that for 70° to 170°, so either the results st be affected by some undiscovered source eror or the curve of conductivity has a maxi-

Specific Heat.—Violle (Paris Academy of St. ice, April 22) has measured the specific heat of

graphite at high temperatures as 10 s to above 1,000 C, it increases linearly with the perature. A gramme gives up 20's care con cooling from volatilization to 0 and M Volle calculates from this that the teiling point is 3,600° C.

Volume Heat.—By this term E. H. Griffithe (Cambridge Philosophical Society, May 15) denotes the capacity for heat of equal volumes at different temperatures. He has calculated it in the case of aniline from the published results of

observations, and finds it constant.

Fusion,-Le Chatelier (Paris Academy of Science, Aug. 12) finds that the accepted mediang point of gold-that due to Violie, who made it 1,045° C .- is a little low. The error does not raceed 20', and the experimenter advises that no change be made for the present in the pyrometer scales that are based on this melting point, Bruner (Paris Academy of Science, April 29) has studied the specific heat of superfound liquids and finds that thymol and paracreed give specific heats that increase with the range of tranperature, when they are evoled without redshification to approximately the same extent below their melting points.

Absorption .- Friedel (Wiedemann's " Annalen," July) finds that when, in a chemical compound, hydrogen, oxygen, hydroxyl, or sitrogen are replaced by sulphur or a halogen, the transmittance of the solution is considerably increased. In homologous series the transmittance is regularly changed by every addition of CH, but the direction of the change depends on the other atoms. The absorptive power depends on the constituents and is independent of the size of the molecule. In isomeric compounds the disthermancy differs not only with the difference of atomic volume of the elementary atoms, but also

with the difference of linkage among themselves.

Radiation.—A. M. Porter (London Physical Society, Jan. 11) finds that, contrary to the usual assumption, the "emissivity" or amount of head that passes outward from unit area per second for I degree of excess of temperature is and independent of the size of the tools, and also depends materially on the shape of the bounding surface.

Temperature, -Berthelot (Paris Academy of Science, April 16: has devised a method for the measurement of the temperature of game that is independent of the envelope. It is based on a determination of the density of the guess by means of their refractive indease as shown by interference fringes.

Temperature of Greatest Dementy of Water .-M. de Coppet of Annales de Chimse et de Parsuge "I has made a new and accurate determination of the temperature of greatest density of water, and finds it to be 3 see? by the hydrogen thermometer under a pressure of I atmosphere,

Light, theorytion - Dufour and Brunes Seicte Vandelese; reported in "La Nature, Ilee. It find from experiments on the equality of carton that a layer of lampblack rie millimetre thick deposited on glass will ned transmit the sun's light. To darken the whole earth, theevfore, it would suffice to reduce to smake a mass of 1 of a cubic kilometry of carbon. Meaning Physical Review," May-Jume) has determined the dependence of infra-red almortes a appear. larization for quartz, Iceland spar, and tourmaline. The transmission curves of the ordinary and extraordinary rays were entirely different in all 3 cases, the difference being especially marked

with Iceland spar.

Refraction. Sir John Conroy (London Royal Society, June 20) has determined the refractive indexes of water at temperatures between 0 and 10° C., and finds that the index increases continuously up to the freezing point, while the rate of increase alters at about 4, the point of maximum density, and that no formula that represents the variation as a function of the density

only can completely express the facts.

Photometry.-Kurlbaum and Lummer (Berlin Physical Society) have made a determination of the unit of light that is based on the light emitted by white-hot platinum foil. To keep the temperature constant for a long period and to be able to re-establish it at any time the ratio of the total radiant energy from the foil to that transmitted by a medium was measured bolometrically. The medium chosen was a thin layer of water in a quartz cell. The errors amounted to 1 per cent., and were due chiefly to air currents

on the surface of the foil.

Spectroscopy.—Wadsworth ("Astronomy and Astro-physics," December, 1894) has devised a way of rotating the prism of a spectroscope, where movement of the collimator or of the observing telescope is objectionable, in such way as to retain minimum deviation for the central ray in the field. A mirror having an angular motion equal to one half the change in angular motion of the minimum-deviation ray is introduced somewhere between the slit and the focal plane of the observing lens. In the spectro-bolometer it is in continuation of the back face of the prism. Langley, in a paper on "Recent Researches in the Infra-red Spectrum" (British Association, 1894), reviews the work now in progress at the Smithsonian Institution in this direction, especially the combination by composite photography of several linear representatives of the spectrum to form a single one, on which "we may expect to find only what is permanent and not what is ac-cidental." He concludes that more than 2,000 lines will thus be mapped in the infra-red spectrum. Edler and Valenta (Vienna Academy of Sciences), in a paper summarized in "The Astro-physical Journal," May, have discovered two new spectra of mercury, obtained by passing an electrue spark through mercury vapor that is distilling at low pressure through a capillary tube. If a large number of Leyden jars are in circuit, the spergum has a great number of fine, sharp lines; if not it becomes a series of bands with edges and the red. The band spectrum corresponds In all gold lower temperature than the line Galitzin (Wiedemann's "Annalen," to the state of spectrum lines superior to those We was burger's principle, on Kirchhoff's law, The it admits of a development erry of molecular resonators. from the country is a consequence, according to this of the remaining produced by molecular collisions of receptains the unsymmetrically at the influence of tempera-ture and the Evershell of Philosophical Magazine. May their the vapors of iodine. bromine, chlorine, sulphur, selenium, and arsenic all glow by external heating, but give continuous spectra. Dense sodium vapor acts in the same way, but on a reduction of density it gives a discontinuous spectrum. The experimenter is satisfied that his precautions precluded the possibility of any chemical action, so that the spectrum was due to true external heating.

Polarization.—Landolt ("Sitzungberichte" of the Berlin Academy, No. 38) has devised a simple method of obtaining lights of different wave lengths for use in polarimetric work by passing white light through absorption cells. The resulting light, though not actually monochromatic, gives a uniform tint in the field of the polarimeter if the rotation be less than 20°. R. A. Millikan ("Physical Review," September-October) has investigated the polarization of the light emitted by incandescent bodies, and finds that it is a minimum with rays emitted normal to the surface and a maximum with a grazing emission, which indicates that the vibrations are in a plane at right angles to the emitting surface. In the following issue he studies the phenomena qualitatively and finds a striking agreement between the measured amounts of polarization at different angles of emergence and those calculated from Cauchy's theory of metallic reflection on the assumption that the polarization is due to the refraction of rays coming from the interior on emergence. The agreement is especially good in the case of molten silver. The fluorescent light developed at the surface of uranium glass is polarized in much the same way, and the fact is explained similarly by the author. Uljanin (Berlin Physical Society, March 8) has investigated the polarization that is due to oblique radiation from silver, platinum, and black gla and finds that curves arrived at by assuming that the radiation of the substance is determined by its refraction correspond well with those obtained by direct experiment, especially in the case of silver.

Rotary Polarization,-Rodger and Watson (London Royal Society, June 20) have attempted to determine in absolute measure the magnetic rotation of liquids at different temperature the effect of the chemical nature of the liquid on this property, and its correlation with other physical properties. They conclude that the usual measure of the molecular rotation, which involves the properties of water, is particularly ill suited for the purposes to which it is applied since the behavior in water is exceptional and its rotation is small. In all of the 10 liquids that they examined, except water, the relation between rotation and temperature is linear, and the quotient of the rotation by the density diminishes with increase of temperature. Siert sema (Amsterdam Academy of Science), with currents of 35 to 65 ampères, has been able to obtain in oxygen a magnetic rotary dispersion of 3° to 4°. A series of measurements were also made on atmospheric air and values for nitrogen

were deduced therefrom.

Luminescence.—E. Wiedemann and Schmidt (Wiedemann's "Annalen," April) draw an important distinction between physical and chemical luminescence. When there is a prolonged afterglow the phenomenon is probably chemical Luminescence under cathode rays is always accompanied by chemical action. The same experimenters (ibid., October) find that the luminescence of what Van't Hoff has called "solid colutions" of manganese sulphate in other sulphates depends little on the concentration, but much on the solvent. The lower the temperature the brighter the light. The spectrum is always a continuous one composed of one band. Pictet and Altachul ("Zeitschrift für Physikaliche Chemie," Vol. XV, Part III) have studied hasphorescence at very low temperatures, and had that it does not take place below —65° C, and that a phosphorescing substance cooled below this point ceases to glow, although the glow begins again when the temperature rises above his point. Knoblauch (Wiedemann's "Annalea," February) finds that there is a constant also between the intensity of fluorescence and the existing light, even when the intensity of the latter is altered in the ratio 1:6,400. Variation of the solvent has a great effect upon the various fluorescent bodies. Witz (Paris Acadany of Science, Aug. 5) finds that lighting with a vacuum tube in circuit with a Holtz machine as Ruhmkorff coil gives less heat with the light than any other known means; yet the casery expended per candle power is greater with the present apparatus.

Dickroism.—Behrens (Amsterdam Royal Academy of Sciences, May 25) has observed imag dichroism on flax and hemp fibers that have been dyed with Congo red, benzo-azurine, or with most other tetrazo dyestuffs that are used for dyeing cotton, whereas with naphthol orange, croceine scarlet, and similar dyestuffs to dichroism was observed. The phenomenon means to be complex and not explicable by assuring a combination of ordinary absorption with common double refraction. The substances experimented upon are as follow, in the order of decreasing case of becoming dichroic: Flax or hemp, siraw, cotton or wood, silk. Wool can not be made dichroic. Their order of decreasing polarizing power is slightly different, as follows: Flax or hemp, silk, straw, cotton.

Tismes.—König and Rubens (Berlin Physical Boolsty, May 10) have investigated the distribu-

Science.—Ronig and Rusens (Bertin Physical Boolsty, May 10) have investigated the distribution of energy in the spectrum of flames. In a briplex burner the energy of the extreme red was found to be more than a thousand times as great at that of the blue. The light from a cloudless that from a cloud had its energy nearly evenly distributed.

Lessisation of Photographic Action.—In 1800 Wiener demonstrated that in a photographic film the photographic action of a stationary light wave is a maximum at the antisoles of Fresnel's vibration vector. This has been generally held to prove that Fresnel's theory is correct, since the photographic effect heald be greatest at the places where the vibration is most intense. Larmor ("Philosophical Magazine," January) holds, on the contrary, that there is no reason for supposing that the action vould take place at the antinodes rather than at the nodes, and he endeavors to reconcile Wiener's observations with MacCullagh's theory. Using the language of the electric theory, the antinosies of the electric force, which tends to pull asunder the constituents of a molecule, are places where

decomposition, as in photographic access the place, while at the intermediate antiquers of the magnetic force the ditimate individual at my may be disturbed, but there is no tenders the separation of constituents. Regarding the closeration vector as identical with French and the magnetic with Mact allights we have a complete explanation of the facts with a reconscillation of both theories.

Visibility.—Pettinelli ("Nuovo Cimento"), in a new determination of the lowest temperature of visibility, finds that a cast-iron cylinder vanishes at 404". Highly emissive substances, each as some gas-light mantles, became visible at the same temperature, but reflecting surfaces had to be heated 20" higher before they appeared to the eye, and glass still more. The smaller the surface, moreover, the higher the temperature required for visibilty, which fact probably accounts for previous contradictory results.

Wave-length Standarda.—The length of the metre has been exactly determined in wave lengths of the red-cadmium line by Michelson, at the observatory near Paris; at the invitation of the International Bureau of Weights and Measures. The mean of two wholly independent determinations gave as the equivalent of the metre in wave lengths 1.552.1604, the deviation of each result from the mean being very nearly 1 part in 2,000,000 ("Travaux et Mémoires du Bureau Internationale des Pouls et Mémoires," xi, p. 84).

Electricity, Resistance and Conductority,— Schuster ("Philosophical Magazine," February) deduces the following important laws regarding the measurement of electrical resistance | 1. With a given resistance and a given galvanometer, the ratio of the smallest change of resistance that can be detected to the sum of the given and galvanometer resistances is equal to the ratio of the smallest current that can be detected by the gadvanometer to the maximum current which can be sent through the resistances. 2. With a given conductor and a given type of galvamemeter, the smallest change per unit resistance that can be measured is given by twice the ratho of the smallest current that can be detected by means of a galvanometer of the same resistance as the one to be measured to the greatest current that can be sent through the galvanometer. It The highest percentage of accuracy with which a given resistance can be measured is directly preportional to the square rest of the maximum electric work that can be done on it without overheating Biernacht (" Journal de l'hysogue, (betober) has devised a new method of measure ing the resistance of an air gap during the pursage of a spark. It is based on the principle that when, with a Hertman remounter in unless with an exciter, the forced and natural sibrations interfere so as to destroy each other, the projetance of exciter and resembler much be equal. For a spark gap of 1 centimetre he thus found the resistance to be between 2000 and 8000 (it is units, while for one of only O4 millimetre it was between 1,200 and 1,500. Net only down the presstance increase with diminuture of the spark length-an unexpected fact-but other properties of the spark alter. A short spine is usually violet-colored and ramified, and a logic one is white and straight, with a sharp nerse

Sanford (" Physical Review," November and December) has extended his former observations on the dependence of resistance upon the surrounding dielectric, which have been severely criti-cised ("Annual Cyclopadia," 1893, p. 621, and 1894, p. 655). His original results have recently been verified qualitatively by Grimaldi and Catama. Further observations on silver and copper wires show that the amount of change of resistance differs with different samples of wire, but is constant in direction for the same material. Thus the resistance of copper was less in petroleum than in air, while that of silver was less in air. The behavior of a copper-plated silver wire was almost identical with that of pure silver. B. O. Peirce (American Academy) in experiments on the resistance of poor conductors, such as different kinds of wood and stone, obtained the following results in megohms:

MATERIAL	Minimum.	Mean.
Mahogany	310	610
Hard pine	. 17	1,050
White pine		1,470
State		280
White marble		8,800

The wood was all well seasoned and the resistance was measured with the grain. Across the grain it was 20 to 50 per cent. higher. The stone was sun dried for three weeks before testing. Gin and Leleux (Paris Academy of Sciences, April 29) find that the resistance of saccharine solutions depends on the concentration and temperature, and is also a function of the current density. R. Colson (Paris Academy of Sciences) finds that Ohm's law does not hold in the case of the propagation of waves of high po-tential, as from the secondary of an induction coil, in high resistances, such as threads saturated with a solution of calcium chloride or capillary tubes filled with water. Tuma ("Wiener Berichte," June 14) has determined the resistance of copper, German silver, nickel, and iron wires for oscillating currents. The results agree approximately with the formulas obtained by Stefan, and for alternating currents of high frequency the agreement was more complete for nonmagnetizable conductors. nonmagnetizable conquerors, and substances the variability of the permeability of the with iron with the conductors. wire the resistance decreased as the current strength increased. J. W. Rodger describes in Nature," Nov. 8, 1894, the experiments of Kontrausch and Heydweiler on the electric conis that of pure water, a constant for which whilely different values have been found. They a lely different values have been found. the as ited at 18 the temperature rate of change frame. - of samples of water of different degive the standard also the conductivity of two was the fact pure water at -2 and 50°. Asthe observed conductivity was rea . . . Con. I that of pure water and a diswas a to the theoretical rate for the at 18 to obtain the conductivity of an analysis of water, which they find to be It smallest value actually observed we would so that the almost infinitesimal quantry foundarity present changed the conductivity to about 10 per cent. Warbring Wiedemann's Vinceton," Marchuis of the opinion that the alteration of conductivity that is produced by an electric current in aniline and similar bodies, and the convection phenomena that they exhibit, may all be explained by supposing them to be very dilute solutions of an electrolyte. The similar behavior of xylol, benzol, turpentine, etc., is probably due to the same cause. Sadovsky ("Journal de Physique," April), in investigations on the influence of magnetic fields on electrical resistance, finds that the difference in the resistance of bismuth observed with constant or alternating currents is measurable outside a magnetic field with a frequency of 30 a second, and can be detected in magnetic fields with a frequency of only 3 or 4. The difference depends on the frequency, and without a field increases with the frequency. Bismuth in strong magnetic fields offers to an increasing current a greater resistance, and to a decreasing current a less resistance than that for steady currents, The difference of the resistances to increasing and decreasing currents increases with the rate of change in the strength, and this difference is more marked with strong currents than with weak ones. The results can not be due to self-induction, or they would occur outside a magnetic field. Pringsheim (Berlin Physical Society, April 26), from experiments on the conductivity of heated gases, finds that the farther apart the electrodes the less the current, while with constant distance the current decreases with the Polarization was quite perceptible for a half hour after breaking the current. He concludes that the phenomenon is electrolytic. Vincentini and Cinelli ("Nuovo Cimento," Vol. XXXVI, No. 3) have experimented on the transmission of electricity through the gas surrounding a wire made red hot by an electric current. The results depend on the gas and show, in the opinion of the authors, that in the case of hydrogen the gaseous molecules that leave the surface of an incandescent platinum wire are positivel electrified, their potential being about 0.25 volt higher than the mean potential of the wire. With air and carbon dioxide the excess is still greater, being about 1 volt. With hydrogen at a high temperature an inversion of the phenomenon takes place. J. J. Thomson (Cambridge Philosophical Society, Feb. 11) has devised a method of measuring the conductivity of badly conducting substances by placing a sphere of the substance to be measured within a coil that is traversed by rapidly alternating currents. second coil connected in series with the first incloses an exhausted bulb. The introduction of the sphere into the first coil causes by induction a change in the currents, and hence an alteration in the glow of the bulb, by observing which the sphere's conductivity is obtained. Branly (Paris Academy of Science, April 22) shows that certain pairs of metals, as copper-zinc, have no contact resistance. Specific Inductive Capacity,-Pellat ("Jour-

Specific Inductive Capacity.—Pellat ("Journal de Physique," November) has devised an instrument for measuring specific inductive capacity in either liquids or solids. It consists essentially of two attracted disk electrometers in which the two movable disks are rigidly connected, and the two attracting disks are electrically connected; one of the latter is movable by a micrometer screw. The two former are attached o the arm of a delicate balance. The substance e examined is placed between the fixed at-sting disk and its movable disk, and the pon of the movable attracting disk is observed. ith this instrument the specific inductive caty of mics has been measured from a plate 0018 centimetres thick.

hysical Review, "May-June) find that certypes of platinum-sulphuric-acid cells, when to potentials less than the electro-motive ne of polarization act as condensers, whose pacity depends upon the impressed electro-tive force as well as on the electrodes. Conrable hysteresis is present in the relation seen potential and charge. These cells are arge capacity, but the high-temperature co-siont and low efficiency prevent their prac-

Academy of Science, Dec. 24, 1894) has died electric potentials in a uniformly movliquid conductor, and finds that at speeds to 823 millimetres a second such movement

duces no appreciable potential difference be-than two points in the liquid.

Glow Discharge.—A. Herz (Wiedemann's annalen," February) finds that the potential dient in the positive unstratified discharge a vacuum tube decreases with increase of current, and also with increase of the tube's ter. It increases with, but not as rapidly the pressure. Mebius (ibid., March) finds straight lines that represent the relabetween current and potential difference different distances between the electrodes low discharge in air are not parallel, the mose increasing with the extent to which air has been modified by the current. The are shown spectroscopically to be probdue to formation of nitric oxide.

islectries.—Gony (Paris Academy of Sci-July 1) has investigated the apparent at-lions and repulsions of electrified conductors a fluid dielectric, and finds that they result from mutual attractions and repulsions of res, just as in a vacuum; and (2) from the rostatic pressure produced by the force that mets the dielectric in the sense where the in-

ty of the field increases most rapidly. mary Cells.—Korda (Paris Academy of b) has made a "thermoelectric carbon depending on the fact that if barium peroxide is reduced, and a difference of poten-About a volt is produced. Borchers (Ger-Electro-chemical Society, see "Nature," 6) has produced an electric current by the calls the "combustion" of carbon mode. He constructed a cell of which one was a carbon bell, the place of the other gas introduced thin the bell, and an ammoniacal or acid soof cuprous chloride served as electrolyte. ctro-motive force of 0-3 was obtained, cornding to about 15 per cent, of the energy se to the oxidation of carbon.

lorage Batteries.—The recently introduced ride battery possesses, it is claimed, the adantages of earlier types without many of their disadvantages. A mixture of the in comment lead and sine to formed into takets at any which is cast a frame of antimonious on chlorine and sine are then eliminated have ag a porous structure of pure crystalline leaded great conductivity and large caponed surface. The battery's capacity is large in proportion to its weight and to the space that it securios. Lincien Poincare (Paris Academy of Science) has endeavored to obtain a secondary buttery with liquid metallic electrodes, with a view of redu-cing the losses that occur in the ordinary lead accumulator. He used mercury and a solution of a salt, forming an amalgam at the cuthode. With the haloid salts of the alkaline metals he obtained an electro-motive force of # waite, an efficiency of nearly 50 per cent., and a capacity per kilogramme of about 10 ampère hours. cells may be completely discharged without de-

teriorating in any way.

Voltameter, - Natur (London Physical Society, March 8) has desired an improved soltameter in which either the caygen or the hydrogen can be collected separately and the fewel of the liquid inside and outside the burette can be equalized, obviating the necessity for correction for difference of level, Christiansen (Winde-mann's "Annalen," November, 1894) holds that electricity can not be generated by fraction alone, but is due to chemical decompositions begun at contact and complete on reparation, This view is confirmed by experiments on the contact of mercury with various insulating line-ines of a tube. Jaumann (Wiedemann's * Amings of a tube. Jaumann (Wiedemann's August) finds that the petential that leads to a spark discharge depends on several elements besides thickness and nature of dislectric, especially on variations of electric force which hasten the discharge and lower the necessary difference of potential. The spark gap is also affected by previous sparks and by a delay in discharging.

Electrification of Air. - Kelvin, Mucheum, and Galt (London Royal Society, March 21: 2nd that positive or negative electricity that is given to air by an electrified needle poset can be even veyed through 3 or 4 metres of small metal taker and shown on a quadrant electrometer to a receiving filter. In general air electrified sugatively when passed through a metallic wares gauge strainer gives up a one, but not a large

proportion of its electricity

Alternating Currents - Procedum Compton Rendus," April 27) has decored an optical metho ed for observing the characteristics of an alber-nating current. By viewing through a pulsa-iscope the changing field of light due to the passage of such a current through a smil that surrounds a suitable medium of transmissionical and by using a strelemospic method, the change can be caused to take place apparently as alone ly as desired, and from it all the presultarities of the current can be designed

Electry magnetic Warrs and Radiation -Transferdge and Duane ("American Journal of Science, April, from experiments on a new method of measuring the velocity of electrical warrs, conclude that if it appears, as there's are with the velocity of light, it may be that the latter velocity can be determined more at a

rately by an electrical and photographic method than by the eye methods which have hitherto The same experimenters (ibid., been used. August) find the velocity of electric waves traveling along two parallel wires to be 3.0024×10^{10} centimetres per second-a value that differs from the velocity of light by less than 2 per cent., and from the ratio between the 2 systems of electromagnetic units by even less, Garbasso and Aschkinass (Wiedemann's "Annalen," November, 1894) have made a prism capable of refracting and dispersing electro-magnetic radiation by fastening resonators made of tinfoil on a series of parallel glass plates. The rays were defleeted by angles differing with the wave length. They conclude from their experiments that the rays of electric force are not necessarily to be regarded physically as monochromatic, but as compound with as much justification as ordinary light. Helmholtz's theory of color dispersion acquires fresh support from their experiments. Yule ("Philosophical Magazine," April) has investigated the passage of a wave train from an oscillator through a conducting dielectric, and finds that the intensities of the reflected rays, the phase changes, etc., for damped wave trains reflected from such a plate differ very considerably in some cases from those for steady rays. Bierknes (Wiedemann's "Annalen, ' January) concludes that in the phenomena called "multi-ple resonance" there are not as many stationary wave systems as there are nodal systems exhibited by the resonator, but that these periods are due to the resonator, which resounds to a simple oscillation at different points. The difference between electric waves and light waves he regards as lying in the fact that the former are damped, while the latter are maintained. Mack (Wiedemann's "Annalen") has demonstrated that electric waves are doubly refracted in wood, the velocity of propagation being different across and along the fibers. His experiment was analogous to the common optical experiment of restoring the light intercepted by 2 Nicol prisms with their principal planes at right angles by inserting a doubly refractory substance, as a tourmaline, between them. The Nicol prisms were represented by Hertzian concave mirrors with crossed focal lines and the tourmaline by a plate of wood 10 inches thick. Bjerknes (Wiedemann's " Annalen," May) has deduced several new laws of electric resonance. He finds that the secondary spark potential is proportional to the square of the period of the resonator, the magnetic or thermal integral effect to t's rabe, and the electric integral effect to its fifth power. Aschkinass (Berlin Physical Sopowed hear a Hertz exciter show diminished reher you that is quite independent of the action of the primary sparks. It persists after the result in of the oscillations, but re-

Manara I arrah "College of Science, Tokio; the first and NV to Nov. 21 has experimented to the first and as a detecter. On exposing to the twint of doubt 60 continuetres' wave length 2 group whose resistances were respectivel 120 v. 12 ms, the resistance fell in some cases as w. 11 and 42 ohms respectively. tirely, leaf it was sarry restored to its former

value by gentle tapping. The angle made by the plane of polarization of the radiation with the strips of the grating influences the resistance, which is greatest when the strips are perpendicular to the plane of the primary oscilla-The author concludes that the change is a mechanical one, and thinks that it may be due to small points on neighboring strips being brought into contact by the electric radiation. J. Klemencic (Wiedemann's "Annalen." December, 1894) explains the strong damping action of magnetizable metals upon electric oscillation by their circular or transverse magnetization, which crowds the oscillations into the surface layers more than with other metals. Hence the resistance of a magnetizable wire to electric oscillations is much greater than that of another wire of equal conductivity. Drude (Wiedemann's "Annalen," February) has investigated the relation between a substance's dielectric constant and the period of the electric waves that traverse it, which he calls the "electric dispersion." For alcohol, this quantity is normal and of the same order of magnitude as the optical dispersion. Water showed abnormal dispersion, and ebonite none at all that was perceptible. Ounes (Amsterdam Royal Academy, Sept. 28) reports as the result of experiments on electrical waves in water (1) that there is no dispersion for waves of the frequency of 27,000,000 to 97,000,000 a second, and (2) that the refractive index for waves of which there are several hundred millions a second equals the square root of the specific inductive capacity measured statically.

Photo-electricity.—Elster and Geitel (Berlin Academy) have constructed a photo-electric cell, consisting of an exhausted glass globe with an anode of platinum wire and a cathode of sodiumpotassium alloy. When the cell was illuminated by light from incandescent zircon, polarized by passage through a Nicol prism, the current that passed through it when its terminals were connected to a 400-volt battery was found to depend in strength upon the angle of incidence of the light and on its plane of polarization, being greatest when the plane of polarization was perpendicular to the plane of incidence and when the angle of incidence was about 60°-the polarizing angle of the alloy. Branly (Paris Academy of Science), in studying the rate of loss of charge from the effect of light in the case of badly conducting bodies, finds that when the light is from a body heated to a dull red the condition of the illuminating surface plays the chief part in the phenomena, the nature of the charged body having no effect. But if the light is rich in the highly refrangible rays, the effect depends on the illuminated body, but in nearly With wood, all cases this loses electricity. marble, cardboard, terra cotta, and hot glass, a negative charge is lost more rapidly than a positive one, while the opposite is the case with wood or metal varnished or coated with oil,

paraffin, or tallow.

Cathode Rays.—Kowalski (Paris Academy of Science, Jan. 14) finds that the production of so-called cathode rays does not depend on the discharge from metallic electrodes across a rarefied gas; that they are produced chiefly where the primary illumination attains a considerable intensity; and that their direction of propagation is that of the current lines at the place on how much it is exacted by the more along the rays are produced from the negative the positive poles. Lenard (Wiedemann's Annalen," October) finds that the ratio between absorptive power for cathode rays and the ate of aggregation, provided the cathode rays of the same kind. Goldstein ("Sitzungbe-chte" of the Berlin Academy, No. 38) notes me curious changes of color in salts under the sence of cathode rays. Potassium chloride, de behavior is typical, assumes a heliotrope ale when caused to phosphoresce in a radiatabe and eventually turns violet. On heatthe color becomes blue and finally white. ther ordinary conditions the hue fades gradu-y disappearing in about a week. The author labs that neither impurity nor chemical demposition will explain the phenomena, and ines to the opinion that a physical modifica-is brought about by change of position and tion of the molecules, due to the radiation,

The Hall Effect.—Lebret (Amsterdam Royal cademy of Science, April 18) finds that the lall effect is dissymmetrical in bismuth under tain circumstances, when the primary elecs are not attached in accordance with 2 ndicular directions that exist in every Van Aubel (Berlin Physical Society, cil 26) has investigated the Hall effect in n layers of bismuth deposited electrolytically, explains the asymmetry of the phenomenon reversal of the magnetic field as due to the inence exerted by that field on the metal's etric conductivity. Wind (Amsterdam Acady of Science) supposes the electric current to t of 2 components of unequal electro-moforce-a current of conduction and a disent current. This hypothesis accords observation, provided we suppose that the elle resistance of metals for very rapid pericurrents exceeds that for continuous cur-

etric Arc.-Lehmann (Wiedemann's "Anen." June) finds that there is no fundamental ence between the are and discharges in thed gases, and that the current travels not through the are proper, but also through surrounding aureole. L. Thomas (Paris demy of Science, Oct. 29, 1894) finds that Itale are between carbons that contain tallic salts consists of a nucleus surrounded a envelope, the former giving band spectra to hydrocarbons, and the latter metallic line ectra due to burning of dissociated salts in ge from the positive to the negative pole.
ndres (Paris Academy of Science, June 10) made a spectroscopic study of the carbons loisean's electric furnace, and finds that the on growths on the negative pole are of a degree of purity, owing to the dissipation e more volatile impurities at the high temthat is obtained. Wilson (London loyal Society, May 30) has investigated the efof gaseous pressure on the temperature of crater of an electric are light, and finds that o pressure increases the temperature des, instead of increasing, as it would if the bon in the crater were at the boiling point. le concludes that the temperature of the craier. ke that of an incandescent filament, depends

These experiments are in a belief that the Sime plactice during at a rear tains cloude of solid carties parties which it could hardly do if carton tooked at the ter para ture of the are or 3,500

Electrodyess - Andreads (" Le Grene 1 14" June 29; has described what he calls indirect of secondary electrolysis of a liquid. In a task of three compartments separated by posture por celain he places two conducting figuids, our in The two end compartments and the other in the middle. If the electrodes are now immersed in the end compartments, the layard therein is decomposed, while the other liquid remains un-If, however, in addition, one or more changed. metallic plates are immersed in the central compartment, without connecting them with either pole, the middle liquid is decomposed, while the end ones remain unaffected. J. J. Themsen ("Nature," Sept. 5), in experiments on the electrolysis of gases, finds distinct explenes of polarization, as in liquids. The difference in the spectra at the two electrisles when a discharge passes through some elementary game is explained by the author as due, partly at any rule, to the difference in the properties of a positively charged and a negatively charged atom. Myers (Wiedemann's "Annales," July) finds that the gases dissolved in the electrolyte of a miner seltameter influence the amount of silver that is deposited. Air lessens it alout I per cent, and carbon dioxide still more, while nitrogen affects it less.

Magnetism. Magnetization. - Curie (" Jour. nal de Physique, June, et sep.) has examined the magnetic properties of substances in Schile of from 25 to 1,350 C. G. S. units and at temperatures in some cases of 15' to 1,270' C bodies were coarsely pulverized and placed in glass bulbs. On the magnetism of diamagnetic bodies, bismuth and antimony excepted, temperature was practically without effect. Pusions and allotropic modification also have no effect except with selenium and phosphorus. The susceptibility of bismuth increases steadily with the temperature up to the melting point, when there is a sudden rise. After fusions it remains constant and nearly at zero. With adultions of paramagnetic salts the susceptibility sartes inversely as the almolute temperature tilass is feebly diamagnetic when cold, but strongly as when hot. The author regards glass as a suitture of a diamagnetic substance that is usualimited by temperature and a small quantity of a passemagnetic substance whose magnetisms weaksus as the temperature rues. The susceptibility of iron at first electronics, but between \$50° and 1,280° it is almost constant, and it then suddenly increases by about 50 per cent, afterward grad-nally decreasing up to 1,365. N. Curse explains this he supposing from to behave like any other paramagnetic lealy up to 800', and then to begin to change into a second allotropic form, rempleting the change at alrest 920', and remaining in the new form to 1,200, techaring like such a leals as oxygen or palladium. At 1,240 there is a sudden reversion to the primitive conditions Mordes (London Royal Swiety, Jan. 17, from experiments on slow changes in the magnetic permeability of from concludes that such that get

are not due to fatigue caused by reversals, and that neither magnetic nor electric action are necessary to produce them, but that they result from long-continued heating at a low temperature, being greater if the heating is accompanied by pressure and not occurring when the rise exceeds a few degrees. Schmidt (Wiedemann's "Annalen," May) finds that steel follows weak magnetizing forces more quickly than iron, For fields less than 0.06 C. G. S. units the susceptibility of soft steel is to that of iron in the ratio of 4 to 3. For fields of one unit the susceptibilities are nearly equal, but for greater fields that of iron is the greater. Weiss (Société Française de l'hysique) finds that the permeability of crystallized magnetite varies with the inclination of the magnetizing field to the crystallographic axes. If the results are expressed by drawings from a given point radii vectors of such a length that each represents the magnetization of the specimen in its own direction when saturated, the surface in which all the ends lie is a cube with rounded edges and slightly hollow faces. These facts seem to show that the theories that regard magnetization as the result of the orientation of particles of fixed magnetic moment are insufficient to explain the magnetization of

Elongation .- Moore (" Physical Review." November to December) finds that the maximum clongation produced in iron wire by magnetization occurs at an intensity of about 1,200. Beyond this point the elongation diminished.

Induction .- Lecher (Wiedemann's "Annalen," February), in a paper on unipolar induction, discusses the question whether, when a cylindrical magnet turns around its axis, the lines of force are stationary, as Faraday thought, or turn with it, as maintained by Tolver Preston and others. Previous experiments, according to the author, may be interpreted either way, but some recently performed by himself show that the former view is the correct one. Hopkinson (Royal Institution lecture) suggests that, since in an electromagnet as large as the earth the reversal of the current in its coils would cause disturbances that would require thousands of millions of years to reach their maximum value at the center, it is conceivable that the earth's magnetism may be due to currents in its material sustained by its changing induction, but slowly dying away.

Electro-magnetic Pulling Force, — Weber Wielemann's "Annalen," January) finds that an iron wire whose length is very great relathe vite its thickness experiences a pulling for propertional (1) to the intensity of the 4 1 1 to its magnetization, and (3) to its seca magnetic field and its at a part of the the force lines. When lying lines it experiences a force simi--- it a ratio that is about 100 in mod-

Wareho that is about 100 in morning with a paper on the unity as the vice of the first courty. Book (Wiede-March) filed that by magnetic of classicity of soft iron and the exceeding 0.5 per ate ... at not exceeding 0.5 per cent is a state dominish, and the ration of the companion of the companion

pressing a state of

Mirrors of Magnetism.—Thompson and Walker ("Philosophical Magazine," February) finds that a plate of iron gives a magnetic image analogous to the optical image produced by a mirror, and geometrically identical with it.

Direction.—Lagrange ("Bulletin of the Belgian Royal Academy," No. 1) states that in practice the orientation of a magnet does not depend alone on the direction of the lines of force of the field, as it should by theory, but also upon the strength of its magnetization. He suggests that this is due to some unknown cause, perhaps

to a "circulation of the ether."

Miscellany, Suspension for Physical Instruments. - Julius (Wiedemann's "Annalen") uses for this purpose a small circular table sus-pended by 3 vertical wires. The center of gravity is brought into the plane of the table by a movable weight attached to a rod projecting downward. Any lateral displacement of the upper ends of the wires will start waves down them, which will perceptibly affect the table only when the period of the disturbance coincides with that of the oscillation of the table about the point of suspension, and even then the axis remains vertical.

PHYSIOLOGY. In the concluding part of a lecture on the work of Carl Ludwig, Dr. Burdon-Sanderson has given a brief summary of the doctrine of vitalism as it now presents itself in the form of "neovitalism." The author pointed out that the principle which Ludwig and his contemporaries advanced in the middle of the century as fundamental in physiology-that no explanation of any observed process or event was to be accepted excepting that which consisted in referring it to chemical or physical laws—was now generally admitted, but was then a new one. Before that the current teaching, with exceptions, was in the opposite direction. It was not denied that, in general, things went on in the body as they did out of it: but whenever a phenomenon could not be explained on this principle it was regarded as legitimate at once to have recourse to the hypothesis of a vital force as a way out of the difficulty. A movement had recently sprung up in Germany under the name of neovitalism which at first sight seemed to return to the old position. Several writers had shown a tendency to follow it, and it was the subject of one of the addresses at the Lübeck meeting of the German Association of Naturalists and Physicians. On comparing the position of the neovitalists with the doctrine current fifty years ago, there appears to be a considerable difference between them. There is, in truth, no revival of the hypothesis of a vital force; for it is recognized that if the word force is used to mean something that manifests itself by measurable effects, there is no indication that any force, except such as the physicist recognizes, is in operation in the organism. In the position now taken it is pointed out that in certain recent instances processes of life which were at first regarded as entirely physical or chemical do not conform so precisely as they were expected to do to physical and chemical laws. One of these which is especially worthy of attention is that of the lymphatic system. It had appeared from the investigations of Ludwig and his pupils that the efficient cause of the

movement of the lymph, like that of the circulation, was mechanical. But Heidenhain found in 1890 that the process of lymph formation did not appear to go on in strict accordance with the physical laws by which leakage through membranes is regulated. The neovitalists suppressed, to account for this departure, a function of cells or protoplasm—living beings—which, being placed at the inlets of the system of drainage, et in less or more in obedience not to physical laws, but to vital ones, to internal laws which are special to themselves. The explanation is ot sufficient, because, while the activity of the cells in the processes of the animal organism is generally recognized, as it was before the neo-vitalism appeared, the question as to how they work is still not answered. The problem of lymph formation has been vigorously attacked nce 1800, among others by Dr. Starling, of 's Hospital, who, by sedulously working out the conditions under which the discrepancies between the actual and the expected had arisen, has succeeded in untying several knots,

The relations of physiology and medicine were defined in an address before the Physiological ction of the British Medical Association, by Dr. David Ferrier, who said: "In former days few, if any, would have been found prosecuting the study of physiology who were not also engaged in the actual practice of medicine or surgery. Things, however, have greatly changed. Owing mainly to the division of labor, which the progof knowledge has rendered a necessity, physiology has become increasingly technical, and tended to separate itself more and more from medicine in its practical aspects. Hence there has grown up a generation of physiologists who have little interest or sympathy with the practitioners of medicine, while we have still, and always have had, a class of practitioners who, though acknowledging physiology to be one of the institutes of medicine, say farewell to ts problems and methods when once they have here lies great danger to the best interests of the science of physiology and the science and practice of medicine. The practice of medicine practice of medicine. The practice of medicine of resources not infrequently rare conjunctions of symptoms, and valuable opportunities of rebearch, too often wasted, which a little physiological training on the part of the practitioner might often have turned to good account; and the necessities of practical medicine have been the most fertile source of inspiration of physiccal experiment. Much of what might otherise have remained as vague surmise or, at most, plausible hypothesis, has been raised to the level of verified fact by well-conceived and often sim-ple physiological experiment. The experimental method is, as it were, the keystone of the arch: indispensable, indeed, to the security of the structure the foundations of which have been laid in clinical observation."

Respiration.—The investigation of the relation of the respiratory exchange of cold-blossled animals to temperature by J. M. Vernon was made to test the validity of the supposition that the metabolism of these animals, contrary to what is the case with the warm-blooded, varies uniformly with the temperature. Measurements of the carbonic acid evolved by frogs were made

at temperatures from 0 to 20 1 finds that the cartespe will complete fregs on gradual warming varies with here w limits from " up to about 1:5 tot ale to the point it increases rapidly with the temperature in cooling, it, as a rule, becomes equals stant from about 175 to 125, or 10' and the decreases uniformly with the temperature curarized frogs and frogs with their but out jured the carteenic-acid discharge insteams as formly with the temperature. If frage to warmed and cooled rapidly several times, the curves of carteenie-acid evolution subsequently obtained are either perfectly uniform or above abnormally marked changes at varying temperatures. The curves do not become mormal again for several days after. The respiratory questions of winter froge in which the bulb has not here injured is about OGI; that of frogs with the bulb injured, about 0.45; and that of curarimid frogs and those subjected to raind temperature changes, about 0%.

From his studies of the path of the respiratory impulse from the bulb to the phrenic and clei, W. T. Porter declures the following theory of crossed respiration: The respiratory impalse descends the lateral tracts. The Shere which convey it end in terminal afterizations at the level of the phrenic nuclei. The deadrites of every phrenic motor cell may be divided into 2 groups; the one group is composed of desi-drites which lie in contact with the terminal branches or end arborizations of the descending respiratory fibers of the same side of the cord; and the other group is composed of relativeplasmic commissure to the opposite side of the cord and lie in contact with the end arterisations of that side. The end arterisations of the descending respiratory fibers of each side are therefore in contact with dendrites of different origin-first, with numerous dendrites from the phrenic cells of their own side of the cord, and second, with relatively few dendrites from the phrenic cells of the opposite side. The greater part of each descending respiratory impulse is discharged into the phrenic cults of the same side, because the dendrites offer less resusance to the passage of a nervous impoles than is offered by the relatively small number of descdrites which have crossed the median line from the phrenic cells to the opposite side. The remaining smaller part of the descending respiratory impulse to due harged into the crossed dendrites, and is conducted by them to the phrenic cells of the opposite sade. This smaller part of the impulse is, bowever, not sufficient, under ordinary circumstances, to cause a reas traction of the opposite half of the disphragm. tink when the crossed impulse is unusually strong or when the prestability of the photonic cylle to prevent can the cremed impulse set this side of the dusphragm contracting. The section of one playense nerve interrupts the ordinary trespirators part of the same sole, and a greater portion, perhaps the whole descending impoles of that sale, passes through the eround dendrites into the phrenic cells of the opposite side. The impulse reaching them is now strong enough ! call forth contractions in the half of the as phragm innervated by them. The cotable of

facts contained in this hypothesis are: The descent of the respiratory impulse in the lateral tracts; the crossing of the impulse at the level of the phrenic nuclei; the ending of the respiratory fibers, like other conducting fibers, in terminal arborizations; and the different course of the dendrites of the motor cells to the cervical region, the majority remaining on the side of the cord where they had origin, the minority crossing in the protoplasmic commissure to the op-

passite side of the cord.

In the method of observing the effect of rapid changes of external temperature on the discharge of carbonic acid, M. S. Pembrey finds a good means of testing the power of heat regulation in animals, provided that the temperature of the animal, the amount of muscular activity, and the condition of the cutaneous circulation are at the same time taken into account. In newly born animals the power of heat regula-tion varies according to the development of the animal at birth. Young animals, such as mice, rats, and pigeons, which are born blind, naked. and helpless respond to external changes of temperature in a way somewhat similar to that seen in cold-blooded animals; the variations in the respiratory exchange and the temperature of the animals are in the same direction as the changes of external temperature. These young animals can not regulate their temperature. Young animals, on the other hand, such as guinea pigs and chickens, which are born in a condition of high development and with protective coverings are able even at birth to maintain a constant temperature, provided that the changes in external temperature are not excess-In the first class of animals the gradual development of the power of heat regulation can be followed. The activity of the animal has to be considered. In adult warm-blooded animals and in newly born animals like the guinea pig and chick a low external temperature increases the activity of the animal. In young animals which only imperfectly regulate their temperature muscular activity is often most marked and maintained at the higher temperatures. The first effect of a fall of temperature is often, it is true, to make the animal active. but its movements soon become feeble, and as regards their purpose are of a similar nature to shivering. The development of the power of heat regulation proceeds simultaneously with the development of the nervous and muscular systems. At the same time the relation of the chitaneous surface to the mass of the young animal and the presence or absence of protective learnings are factors, but only of secondary im-

It has been found by John Haldane in the one of his inquiries into the origin and action for a flative or poisonous gases met with are the earl toines that the poisonous acto the season and vice versa. At a tension - about to the case of mice. The d as said and the prisitions action is due to the fact toat at high exygen tensions the animais an overess entirely with the oxygen-earrving fire and flaring lobin. The poisonous action of all the oxide is entirely due to its power of combining with the hamoglobin of the red corpuscles, and so putting them out of

action as oxygen carriers.

Circulation.—Contrary to the view that has prevailed since the time of Harvey, J. B. Hay craft holds that the impulse of the heart against the chest wall is diastole, and not systole; and that it is the effect of the force of gravity acting upon the flaceid and passive, but rapidly refilling ventricle from which the pressures of external supporting structures have been removed by the experimenter in his attempts to inspect its action. He contends that in systole all diameters increase, and that when the lungs are inflated so as to give something like their normal support to the heart, it does not twist from left to right, and thus does not strike the chest wall with the apex of the left ventricle.

Experiments on the effect of gravity on the circulation, continued by Leonard Hill, of London, illustrate the quickness with which the pressure alters with even slight changes of bodily position. Turning an animal upon its back, lowering or raising its head, placing it upright, and other changes affect the arterial pressure to a marked degree. Prof. Hill has further shown that an abdominal bandage, by merely restricting the blood supply to the lower viscera, increases beneficially the vascularity of brain and

muscles

By the application of Von Baseh's very delicate sphygmomanometer, Van Ziemssen has found that the normal tension in the temporal artery is from 80 to 110 millimetres of mercury. In a case of arterio-sclerosis with cardiac hypertrophy, it rose to from 180 to 210 millimetres. and in a case of valvular insufficiency fell to 50

millimetres, of mercury.

The origin of the blood corpuseles is referred by M. Wernicki to the eosinophile layer of the cancellous tissue of bone, the granules of which receive a coating of hamoglobin at the spleen, and then constitute the hæmatoblasts of Hayem. Dr. Sacharoff is understood to hold a similar view. As against it Siabocillo sets the fact that the rays, the blood of which contains a large proportion of eosinophile cells, have no bone and therefore no cancellous tissue, Wernicki thinks that all the white corpuscles have the same origin, that they are short-lived, and that they after escaping from the cells by a diapedesis nourish the bones.

The views of Keller, expressed several years ago, as to the constancy of the absolute quantity of blood in the cranial cavity are incidentally supported by the experiments of Bayliss and Hill to determine the relations between the pressure in the cranial cavity and the blood sup-

ply to the brain.

Results of much interest have been obtained by W. Halliburton, S. W. Pickering, and T. G. Brodie in experiments on intravenous clotting resulting from intravenous injection of certain artificially made colloid substances. These compounds closely resemble proteids in their chief reactions. Some of them contain phosphorus, while others are destitute of it. anticipated that this line of research may cast light on intravenous clotting from disease, and on that induced by the venom of snakes.

The studies of W. Hannsen on the effects of

defibrinating blood and the act of congulation upon the blood corpuscles indicate that many of them are destroyed in these processes. The proportion of the uninucleated corpuscies differs from that of the multinucleated.

Dr. Cohnheim reports upon experiments on injecting solutions of sugar into the blood vessels, in support of his views as opposed to those of Heidenhain on the formation of lymph. The results were the same as on the injection of salt solutions. The amount of sugar in the blood fell very slowly in the lymph. The maximum of sugar observed in the lymph was equal to the maximum met with at an earlier stage of the experiment in the blood. The solid constituents of the blood became less after the injection, and then increased slowly to the normal; in the lymph, on the other hand, they increased at first and then became less. After the injection of sugar the blood capillaries of a frog's web were considerably dilated, and the circulation quickened. Dr. Cohnstein interpreted these results as indicating an initial passage of water from the intercellular spaces into the blood vessels, followed at a later stage by a return filtration into the lymph. He had also observed a diminution in the secretion of bile after the injection of sugar, and attributed this to compression of the e capillaries resulting from dilation of the blood capillaries.

A new method of studying the functions of the cell described by Dr. C. Leonard, and applied by him especially to the examination of the movements of the red and white blood corpuscles, consists in making a consecutive series of instantaneous photomicrographs of the same microscopic field, taken at different intervals, so that a comparative study of the series can after-

ward be made.

By injecting a pigment into a vein, Anderson Stuart has measured the time occupied by, for example, a blood corpuscle in making the circuit of the body, and estimates it, for man, to be

afteen seconds,

Digestion.—Leaving fresh fibrin in strong saline solutions, Dr. A. Daustre found after a certain time 2 globulins in the solution, one coagulating at 54° C, and the other having the properties of serum globulin; proteose and true pertone were also present. This action of sa-line solutions on fresh fibrin can be divided into different stages. If fresh fibrin be submitted in the same manner to the action of the disettve juices the same results are produced. It is, then, proper to speak of a "saline solution" of fibrin. Fibrin submitted to the action of oxygenated water and to that of micro-organisms gave the same results. When gelatin is similarly treated gelatoses are produced and the

gelatin loses its power of contraction.

Speaking of the formation of uric acid in man, Dr. Weintrand said, in the Physiological Society of Berlin, that after the view that the exerction of uric acid is in direct relationship to the proteids of the food had found no support from the experimental side, the theory been propounded that it related to the breaking down of the lencocytes. This view was supported by experiments in which the administra-tion of nuclein and xanthin to man had increased the output of un and les other hand, dintlar experiments on a problem always ticking togative results. The equation had experimented on several material as . substituting themus gland, not in our and the ordinary flesh of the field. The its teamse-excretion of phosphoric acid in the arms shown that the nuclein was largely resorted and a constantly large increase in the excretion of one actil was at the same time closer test. The latter disappeared again when ordinary firely was notstituted for the thymne glazel. Apart from theoretical considerations, it appears that finds rich in nuclein or santhin should be avioded by patients suffering from excessive formation of uric acid.

Apalysis of the pile of 115 children, made by Dr. Sommerfeld, shows that in comparison with the bile of adults it contains more water and much and less bile salts. It contains no area or epithelial sulphates, and in the case of children who had died of diphtheria it was free from bile salts. Examination of the urine of children suffering from various forms of segaritis showed that it contained an abnormally large amount of santhin compounds which could not be accounted for by any breaking down of epithelial cells or bland corposeles.

In experiments made by Dr. Vaugho-Harles to determine the relation of the panerous to the absorption of fat in dogs, the animals were hept fasting for two days and the lawels were dails washed out with an enema of hot water, a small giveerin enema loing given afterward to effect the expulsion of the water. On the third day the panereas was removed under an ansethetic, the enemata being continued for two data. These animals were compared with others that were intact. The animals of each set were then supplied with a measured quantity of warms milk, and after a number of hears, that varied an different cases, the animals were killed and the entire contents of the stomach and intestines were reparately analyzed. In the intact and mals the maximum rate of almorptons of fat or curs about seven hours after the expestion of food, for normally a deg abserts from 9 to 31 per cent, of the total fat given in from three to four hours, from 21 to 66 per cent in seven hours, and 86 per cent in eightern hours. In a normal dog the passage of fat from the elements varies with the individual as well as with the time allowed for digretion but in eighteen house the whole has entered the intestines. In dogs. that have had the panerous removed, this quatetity of fat given to b. 4 . c. is again revenuend, bad a surplus to found which to go bat a derived from the intestinal secretion or exerction. The author also found that the capability of passage of fat from the observe to very much delayed he the externation of the parerous, such dogs passing in several boots only from 9 to 22 per rest through the policies instead of, so in some maldigs, about so per cent.

The splitting of the case is molecule that takes place in digestion is found by Drs. E. Salloweks and Hahn to be due to the specific action of person. It appears that while now part is dissolved and absorbed, the other part remains

a luble as paramodeso.

The glycolytic ferment contained in the third

has been examined by Harburger, who finds that it converts starch into sugar much more slowly but as effectively as the salivary, pancreatic, or intestinal ferments. Its activity, according to J. Abelons and G. Biarmes, differs in different animals and at different ages. Harburger names it givease, a ferment which has hitherto been

found only in plants.

The investigations of Dr. McKechnie, of Talawakela, Cevlon, on the action of tea upon the digestive organs were carried on with test tubes, while a glycerol extract of pepsin was used as the digestive fluid and beef fiber and albumen as the alument. From the results of the experiments, which are described in detail, the author is led to the opinion that the tannic acid is not the injurious agent in the retarding of digestion by tea, but the injury is caused by some of the less soluble extractive matters; also that the action of tea is not so injurious as some writers think it is. The character of the action depends greatly on the method of infusing. Long-infused teas seem to extract some substance, probably an alkaloid, that has an inhibitory action on the nerves of the stomach.

Glandular System.—A secreting organ is defined by Edward A. Schäfer as one which separates certain materials from the blood and pours them out again, sometimes after effecting changes of some sort upon them, usually upon external surfaces, or at least upon surfaces which are connected with the exterior. There are, however, some secreted materials that are not poured out upon an external surface, but are returned to the blood. These may be termed internal secretions, and they are of no less importance than the ordinary or external secretions. The name of "ductless glands" has been applied to those secreting organs which have been believed to furnish only internal secretions. Such secretions are, however, furnished to a greater or less extent by some of the ordinary glands, and by other parts of the body. Thus the liver and the pancreas are as essential to life by virtue of the internal secretions which they furnish to the blood as by their external secretions, and the entire removal of either cause death, which is due to the removal of the influence they exert upon the metabolism of the baly by the loss of their internal secretions. So too does the entire removal of the kidney; although life is sustained if a small portion of kidney substance is left. This is true also of the pancreas, the internal secretion of which has been found to prevent the excessive formation of sugar in the blood and the urine. The functhat of the thyroid gland are still undeterthat it yields an internal secrethe seat the effects that follow thyroithe gland-altering the that the animal deprived or ract to changes of temperaloc to the loss of that secre-te body supplies an internal other for the results of which are declared to the medula the medula

of the suprarenal capsule contains a dialysable organic principle, soluble in water, and not destroyed by boiling for a short time, which produces a powerful physiological action upon the muscular system in general, but especially upon the skeletal muscles, the muscular wall of the blood vessels, and the muscular wall of the heart. A certain amount of action is also manifested upon some of the nerve centers in the bulb, especially the cardio-inhibitory center. and to a small extent upon the respiratory cen-These internal secretions, Dr. Schäfer adds, have to be definitely reckoned with by the physician, while at the same time the therapentist will be able to avail himself of the active principles which they contain, and in certain cases to use extracts of internally secreting glands in place of the hitherto more commonly

employed vegetable medicaments.

Dr. Levy Dorn has communicated to the Physiological Society of Berlin the results of his observations on the effect of various temperatures on the secretion of sweat. His experiments were made upon cats, and dealt with the secretion of sweat at low temperature. The sweat glands were kept at the temperature (19°-30° C.) most favorable to the secretion, while the animal's body was cooled by water at 6° C., and secretion was obtained as a result of dyspnea. notwithstanding the cooling of the body. The author also gave account of experiments made with a view to testing Prof. Grützner's assertion that heat acts only on centripetal and vasomotor nerves, but does not affect motor or centrifugal nerves. Carefully observing all the experimental conditions described by Grutzner, he had found that the action of heat on the sciatic nerve leads to a copious secretion of sweat on the cat's paws, that is to say, stimulates centrifugal nerves.

The active principle of the thyroid gland has been further experimented upon by Dr. Sigmund Fränkel, who, precipitating the albumi nous bodies from the extract with acetic acid, found that the virtue resided in the filtrate This was then chemically examined, when upon solution in alcohol and addition of ether an intensely hygroscopic body was obtained, soluble in water and alcohol, the watery solution having a neutral or slightly alkaline reaction. empirical formula has been calculated as C. Hi N_2O_4 , and the substance is provisionally named "thyreo-antitoxin." Sufficient time had not yet clapsed to establish any definite results from investigations clinically made with this body. Dr. Fränkel has failed to find the fall of blood pressure demonstrated by Dr. Schäfer upon intravenous injection of thyroid extract, but acceleration of the pulse rate was well marked. The author also found that the hearts of frogs poisoned by muscarin which had ceased to beat could again be brought to act by drop ping on them a few drops of the thyreo-antitoxin. In animals, too, after the thyroid glands had been extirpated and convulsions and other symptoms had ensued, temporary recovery followed subcutaneons injections of a 1-per-cent-watery solution of the remedy. These experiments agree with those made by Gley, of Paris, with injections of thyroid juice. Dr. Frankel maintains, therefore, that he has demonstrated

the isolation of the active principle of the thyroid gland, and that it is a pure chemical body with well-defined properties occurring in considerable quantity in the gland. He anticipates that we shall eventually be able to administer this particular antitoxin in exact doses. As he has isolated the body it is odorless, with a taste that reminds us of the extract of beef rather than of the thyroid and its extracts."

The extracts of the ductless glands are shown by the experiments of Oliver and Schäfer to produce, even in the most minute quantities, immediate and incommensurable results. Thus, bloost pressure is raised by a trace of pitnitary extract, lowered by thyroid, and first raised and then lowered by splenje extract. While extracts of the cortical parts of the suprarenal glands are comparatively inert, extracts of the medullary portion have an extraordinary power when injected into the vessels, raising the arterial blood pressure to from 2 to 5 times the normal tension, apparently by causing contraction of the systemic arterioles.

The studies of M. L. Ranvier on the development of the lymphatic vessels in the embryo of the pig have led to the conclusion that the lymphatic system may be considered as an immense vascular gland, having its embryological origin in the venous system, and throwing its secretory

product, the lymph, into the veins.

Muscular System.—The unstriated muscles in vertebrate animals have been found by Dr. Schulz to consist of elongated cells, pointed at each end, the length of which is very variable in different animals. Each cell consists of fibrils imbedded in a highly refractive interfibrillar substance, and of granules and a nucleus in the middle of the cell with two nuclear bodies. Two nuclei in one cell were seen only once among thousands of preparations. The fibrils interlace with each other. The separate cells are not held together by any cement substance, but by protoplasmic threads and branches. The transverse triation described by many observers appears to be due to a wrinkling of the cell resulting from complete extension after having been contracted. Nerve fibers are very plentiful. With methylene blue, gold chloride, or by Golgi's method, numerous ganglion cells can be brought into view, from which short branches are distributed to the musle cells. In addition to these, numerous nerve fibrils can be seen ending in minute bulbous swellings which are applied to the muscle. perves are sensory as well as motor.

The conclusions reached by Mosso and Harley as to the respective functions of active and resting living muscle are confirmed by the experiments of Prof. Stokvis. This author reiterates the conviction that resting living muscle must be looked upon as a storehouse of potential energy, while active muscle represents a close approach to absolute perfection in the conversion of the energy of the fuel or food into work, and considers himself justified in assuming that in healthy persons muscular fatigue and exhaustion are not caused by want of food but by want of

rest.

Prof. Gaule, of Zurich, regards the growth of muscle as periodic, and supposes that changes corresponding to the periods exist in muscular fibers. He has found that within twenty-four

hours of the excision of the 'regardion the biveps and point of the incident incident and point of the incident in the control of the incident in the contr

An Italian physician, Signed Morea the restigated the influence of facting to puties a twenty-four and of thirty are boursed his cascular power, testing this to the bar a furtarial was of, and by the application of an electrical current to the muscles of his forwarm. The ender one at which he has arrived to that facting within the above limits has no influence on the mare-The deviations after beger periods observed by other investigators he thinks, are attributable to the effects of the facility on the mers one exetem, circulation and requestion begand Matica distinguishes two stages in fasting one in which a kind of compression of the injurious effects of fasting to effected the agency of the nervous system, and a second in which there is deranged compensation with disturbances of the several organs serveg; marked accompanied by loss of weight and at adapt eacretion of nitrogen in the urine, ofter which death occurs. The great powers of recontains personned by the muscles in regard to their form are, he thinks, due to the glyrogen and sugar in the blood, which do not materially after in quantity even after prolonged abstinence

burg on the effect of load on the metals sum and body functions of soldiers on the march two students, feeding uniformly on a second had complicated but accurately analyzed doct made on alternate days marches up to 45 kin certers with a load increasing to 31 kilogrammes. Taking first the nitrogenous metabolism, it was I and that the excretion of nitrogen through the armse and sweat was but slightly increased by even the most severe exertion. The night has of protend thus noticed was made good in the solven used period of rest. At the end of each experiment this consumption of oxygen was found to be greater than at the beginning. When the marches were made on three consecutive days with an inverse ing lead, it was found that the committee & oxygen was increased even at the beginning & the third day's march, and was still forther increased at its end. The hada temperature rose to 385' Un and in some cases t 40 C. The hest production was three times as great as during rest, and the regulate of te perature to compensate for this was also of cut in a langest about he the crap cate in I sweet The comcontration of the blood was found to be best very slightly in-reased by exhausting marches, the blend tral to specim les were bard a more an mercius than normally, whereas the white corporates were increased to a marked degree in number. The movements of the heart at the end of the expectments of weed a lengthering of the evelor and distentum of the right ventrade whose dell sees on persons to as also that of the love, was extended during severy exertion. The respect or activity was at first and with light heads, emperored, but later in diff ulties in breathing made their agpearance. The parchic condition, as measured in the reaction time to simple stamuli, was a t

depressed by heavy marches; but when fat go

patients reacted more should to compare unit

stimula. Muscles bed used in mary beg very at

readily excitable at the end of the most severe march as during complete rest. A high external temperature was found to exert the same influence with a light load as the heaviest load did at more moderate temperatures, and some details of the experiments were found to depend on in-

dividual proclivities.

Nervous System.—Prof. Waldever, in an account of the most recent researches on the formative structures of the nervous system, lavs special stress on the following statements: The entire nervous system consists of single elements, which may most conveniently be called neurons, each of which is composed of a nerve cell and its processes. These processes are, on the one hand, protoplasmic dendrites, which rapidly become branched, and, on the other hand, neurites or axons, which give off collateral branches, soon become medullated, and end in fine branchings, as also do the collaterals. Each nerve cell has only one axon. The dendrites convey impulses to the cell; the neurites or axons convey impulses from the cell. All nerve fibers, both dendrites and neurites, end freely in fine branchings. Every physiological path of conduction, whether from the periphery to the central nervous system or vice versa, consists of two or more neurons; never of one. Conduction in the neurons is always longitudinal. Impulses are transmitted from one neuron to the other only by means of the free endings of the terminal branches.

From experiments in which section of all the sensory roots of the nerves distributed to a limb was followed by permanent motor paralysis, in addition to the anæsthesia which might be expected to occur, Dr. Mott and Prof. Sherrington conclude that the whole sensory path from periphery to cortex cerebri is in action during voluntary movement. Dr. Bastian, on the other hand, maintains that there are no motor, but only sensory centers in the cortex cerebri, sensorv impressions and the activity of sensory centers being the real guides for volitional action, and the true motor centers existing only in the spinal cord. Dr. E. Steinbach has shown that the posterior roots of the spinal nerves are not exclusively sensory, but also contain motor fibers, which are distributed to the visceral muscies originally developed from the lateral plates

in the embryo.

Mosso has set forth that the brain is a seat of active combustion, and that its temperature ness still higher when it is stimulated to activdo by direct excitation or by drugs, perments of Leonard Hill and N. D. Nabarro to a bear out these conclusions, for it apis are from their that when compared with the the brain is not a seat of active comthe control of the blood.

It was a fine blood.

It was a fine blood.

· state of transmission of sensory improgramme and in or impulses is the same in TAN DELETE A CE STATE AND A STATE A CE STATE about 1 more per second. In the cord alone it is upward following per second, so that time is 1 st of the transference of the sensory impression from the terminals of the sciatic nerve in the cord to the cells of the cord. In locomotor ataxy the speed is slower in both, but

especially in the cord.

Much information concerning the conditions of sympathetic or referred pain has been afforded by the combined results of the experiments of Sherrington and the more clinical researches of Head relative to the precise nervous connections between the sensory nerves from the internal organs of the thorax and abdomen and certain other sensory nerves supplying the skin. Examples of pains on which light is thus thrown are that over the chest when the blood vessels of the heart are occluded in angina pectoris, pain between the shoulder blades in liver diseases, the radiating pains attending the passage of calculi along certain duets, and the headaches and neuralgias connected with various kinds of visceral irritation. In these re-searches, with those of Langley and Anderson, certain areas of the skin surface have been defined as invariably the seat of referred pain when certain deep organs are diseased.

In his application of the results obtained by Gaskell's observations on somatic and splanchnic nerves to the study of the emotions, Prof. A. C. Wright takes as an example the phenomena observed in a kitten confronted with a strange dog, and shows that such an emotional stimulus would call forth in the kitten a regular series of reflex responses. First, through the involuntary visceral nerves; then the semi-involuntary muscles would be called into action; and, lastly, a reflex response would take place in certain parts of the voluntary muscular system. The essential features to be recognized here and in every emotional reaction are the origination of the emotion in a violent sensory stimulus, a condition of extreme neural tension in the reflex center, and an overflow of neural energy into different paths. This overflow takes place first into channels associated with semivoluntary muscle, and lastly into those associated with voluntary muscle. The physiological essence of the emotion is to be found not in the visceral reflex actions, but in the high neural tension of the reflex center which gives rise to those actions. In childhood sensory stimuli call forth in each case responses of both involuntary and voluntary muscle, while with increasing age the ontflow of neural energy from the reflex center becomes more and more restricted to paths associated with involuntary muscle. As a result of such transformation we get voluntary action with a purpose. Some system of control of the reflexes appears to be a priori a necessity, since, "if each animal stimulus were to evoke a separate reflex movement in an organization which was endowed with sensitiveness at all approaching that of the human organization, life would be a mere chaos of involuntary movement." Voluntary muscles react to the slightest stimuli, but involuntary muscular actions are called out only by intense stimuli or by a summation of slighter ones. High neural tension in the reflex center is therefore necessary for these reactions of involuntary muscles, and all such high neural tension is attended with symptoms of distress. The replacing of the "generalized somatico-visceral reflexes of inexperience and childhood by the specialized purposive reflexes of experience and will life . . . is not so much a question of substituting one variety of reflex for another as it is a question of substituting a condition of low neural tension for a condition of high neural tension."

An investigation by C. F. Hodge of the changes in ganglion cells from birth to senile death leads him to the conclusion that if we take the nucleus to be the source of rejuvenation for the cell protoplasm, age seems to be indicated as of the nature of final fatigue-final because the source of energy for the nerve cell has dried up at the fountain head. It is not implied that nerve tissue is of any more importance in relation to physiological dving than any other tissue. The exact position held by each must be clearly determined by experiments,

Having studied the rapidity with which the impulses producing voluntary tetanus succeed each other, Dr. Fraser Harris finds that the con-traction of the muscle is not a complete but an incomplete tetanus, and that the rhythm of the volitional impulses proceeding from cerebral motor areas has an average rate of from 10 to 12 per second, or that it has some higher rate transmitted into one of 10 or 12 per second by the activity of the motor cells of the cornua of the

spinal cord.

Two years after Prof. Vitzon, of Bucharest, had produced blindness in a monkey by removal of the occipital region of the brain, the animal recovered a small part of its vision. A new formation, very vascular, was found on examining the brain at the seat of the lesion. Its ex-tirpation reproduced the blindness. Nervous elements were found in this new tissue,

The Mexican cactus called peyotl has an in-texicating action, and in large doses produces sieep and a state of nervous excitation accompanied by a disposition to voluble speech. Small doses of the alkaloid given to frogs by Prof. L. Lewin produced tetanic cramps and a greatly increased reflex irritability, analogous to the effects of strychnine; but with the difference that by carefully apportioning the dose the effects were permanent for several days. Similar results were obtained on administering the new alkaloid to rabbits, and Prof. Lewin regards it as specially adapted to further the study of the nature of tetanus. It was noticed in rabbits that during each paroxysm of cramps the blocal vessels of the ears were widely distended. author has found alkaloids with powerful actions in many other species of cactus hitherto regarded by botanists as harmless,

Dr. M. Grossman has demonstrated that the inhibitory fibers of the heart are formed by the 3 or 4 lower fasciculi of the vagus and the uppermest fasciculus of the spinal accessory nerve.

Special Senses.—The results of the investi-gations of Exner in cerebral localization are summarized by Dr. E. C. Spitzka, of New York, as having shown that the general principles of localization are correct, while they have made the narrow limitation of numerous centers to areas not exceeding a few millimetres in diameter seem untenable. "Just as the fiber masses of the corona radiata are seen to spread out fare shaped, and while terminating chiefly in some

especial certical districts, ect of a crifilers to neighboring areas to the fire . . cal function delineated by Exact work are shown to reserved of alm -c ; 'relative' fields. The former have a sea of The former have a contact relation to a given function, the destruction the 'alm lute' field for the must be of the atis always followed by paralysis of these book ice. The latter have an incommant relation the orstruction of the relative field of the arm muscles, which surround the absolute field in a care of gradually diminishing interesty, manetimers leads to such paralysis and sometimes done and The various fields of moder and many to make are also noticed to develop commiderably the field for the arm dies out within the visual area and encreaches considerably on the squeeh field. But a most interesting part of Esper's labors me compilation and comparison of the authorizant cases of limited cortical lesson wattered through modern neurological literature is his e ear uson that, as a rule, the sensory fields are mostly identical with the motor fields for the came periphery, and he cites this as a remarkable confirmation of the experimental results of Munk, who found his tactile areas in the dog a brains to currespond with the motor areas of Hesting and Fritsch. Not only do the tactale fields correspond very closely to the motor fields of the same body regions, thus sustaining the anticipation of Meynert that the function of the current as and so much the liberation of an espisare modes force as the mediation of sensal aga of many a tion, but all determinable function areas which on physiological grounds must be commisered to require a bond of association in the corrected mechanism are found to have a reguesal comtact. Thus, the symbolic field, that to deceased to the registration and literation of speaker and written symbols, is found to appeared the fields of the upper extremity and of the lingual and auditory peripheries. While car knowledge of the sensory cortical area is daily becoming more satisfactory, that of the course of the sensery tracts connected with the certical areas - quere tion is very imperfect.

The mechanism of accommodation in the eye, which has not vet been sat stact et a sterm sed, is discussed again to Dr Wilbeim School physiological problem as programmed to Ashert in How can the increase in the converge of the anterior curvature file en man anterior of the eve for near objects take place with and change of our ature of the posters a sufface of the less and without was go of place of the arms steelff Dr. when thicks the return to be miles would be better jut in the ferme, How can the the translate at the auters of home our farrire ut w | beut bacge of parv with nd male rial alteration in the posterior out new of the lessa, and it is it is a real to receive the less bear and without the reason of tensor on the acceptor chambert After centuring the grantalle reversed the rind Helmbelts in the effect that accommon data is for twent of perto a effected by the eventeurtriting the meral was flore of the collect mouse. who have abee the mondar filers, and thus perm . the let a to become more convex, and those it is the raw which attribute accommodation to the at two of the circular fibers of the cabare " . . . to their pressure exerted on the was alleger

the iris or the ciliary processes, to increased tension of the zonular fibers, and to change in the hydrostatic pressure in the anterior chamber, Dr. Schoen advances his own theory, which he thinks can best be understood from the following illustration: An elastic ball is to be grasped with both hands, the wrists being kept together. The 10 fingers are then bent in so as to be applied to the ball along a line that, if the ball represented the earth, would correspond to the arctie circle. If pressure be now made with the tips of the fingers the free part of the ball will bulge forward. Now the finger tips represent the ciliary processes and circular fibers of the ciliary muscle, the palms of the hands the merichonal fibers of the ciliary muscle, and the two wrists the optic nerve. The anatomical relations, he contends, correspond completely to his theory for the anterior capsule. The zonular theory for the anterior capsule. fibers and the retina form an investment to the vitreous humor and to the lens that are quite analogous to the elastic ball. The fibers of the ciliary muscle and choroid lie on the outside of the investment just as the palms of the hand are external to the elastic ball, and the eiliary processes form a similar groove, and exert the same kind of pressure as the tips of the fingers in the above illustration. The depression caused by the ciliary process is always slight, never exceeding 1 millimetre.

The invisibility of infra-red light is explained by Cima and Janssen on the ground that the humors of the eye are opaque to it; by Tyndall, Engelmann, and others, because the light is incapable of exciting the retina; while Helmholtz supposed that the strong absorption suffered by the infra-red rays in their passage through the eve was sufficient to account for it. While all observers have found that the rays are strongly absorbed in the eve, Herr Aschkinass has recently shown, as the result of experiments made upon thin layers of the humors of an ox eve and a human eye, that there is no sudden increase of absorption beyond the red end of the spectrum, and that the absorptive powers of the various media of the eve are practically the same as those of water; and the experiments indicate that a large proportion of infra-red light reaches the retina through the eye, but is not capable of

affecting the nerves and producing sight.

Miscellaneous.—M. Charles Richet, in a paper on "Functions of Defense in Man and Animals," deals, among other things, with the power warm-blowled animals have of resisting exposare to add. In the dog exposure to a cold of - 91 C for half an hour was accompanied by a the of the rectal temperature, and it resisted the desired that degree of cold for two hours. Signal of expensive to cold may be contrastalthor remarks, with the beneficial efthe advantages of the sentiment of fear in the taby we many animals and cirhave a start of saves us often from ourse the feeling of the feeling of M. R. bet maintains that were it not for the second of vertigo falls and serious according to the home to more frequent occurred. rence Passing the ant openion of it, has its protected inflation. Under pain the respiration quickers, the heart beats more rapidly, the arterial blood pressure rises, the glands secrete more abundantly—all conditions that tend to the re-enforcement of the biological activity of the organism. As Brown-Sequard would have said, there is dynamogeny of the whole Finally, he considers the remarkable means of defense we possess in our leucocytes and phagoeytes against the multiplication of

microbes in our system.

It is remarked that more varied physical agencies and more multifarious and compli-cated chemical phenomena are found among cold-blooded than among warm-blooded animals. Some fishes and many insects and ma-rine animalcules have the power of emitting light; several fishes, a bug, and a slug, it is said, have command of the electric current; many arthropods and a few mollusks have the power of secreting and emitting silk; many reptiles, amphibia, fishes, insects, and arachnoids secrete intense poisons, which are very rare among the higher animals, except under diseased conditions; dyes, also rare among mammals and birds. are abundant in mollusks and insects; and odor are much more abundant among cold-blooded forms than among the higher animals. In view of these facts the question is suggested by Mr. J. W. Slater as a subject toward which research may be directed whether the energy which in hot-blooded animals is expended in keeping up the temperature of the body may not in the cold-blooded forms be converted into luminous

or electrical or chemical energy? Among a number of instances of death by electricity studied by Mr. Bernhardt was one recorded by Dr. J. Kratter of a man who was traversed by a current of high tension, and was found breathing stertorously a few steps from the point where he made contact. The postmortem examination, twenty-one hours after his death, disclosed 2 small wounds, one on the index finger, and the other on the back, with larg extravasations of blood in their vicinity. All the organs of the body showed hypervenous blood, acute ædema of the lungs was present, extravasations were observed in various places the muscles were in extreme rigor, and the heart was partially relaxed. No microscopic changes were remarked. Dr. Kratter thought that the electric shock suddenly paralyzed the heart, and that was the immediate cause of death, accompanied by cedema of the lungs producing hypervenosity of the blood. A marked contusion was seen on the left side of the diaphragin at the point of contact of the heart. Experiments made on animals showed that in them the respiration was usually primarily ar-rested, causing asphyxia and secondary stoppage of the heart's action, though the heart is some-times first affected. In a second case, reported by M. d'Arsonval, the current, of 4,500 volts, entered at the head of the man, and issued at his back. On the application of artificial respiration by Sylvester's method, more than half a hour afterward, recovery took place. In a third case, reported by Dr. Donellan, on the passage of a current of 1,000 volts through a man. coms instantly resulted, with dilated pupils, pallor of the face, and sweating; delirium and tonic, alternating with clonic spasms, followed. The pulse was 80, the respiration, at first stertorous,

ed into the Chevne-Stokes type. After the election first of morphine, then of strychnine, patient fell into a deep sleep, from which

awoke convalescent.

Experiments by Dr. Renzi showed that sunine materially assisted guinea-pigs in contend-g with tuberculous disease; for the animals s affected succumbed much more rapidly in re diffused light than those which were exsed in glass boxes directly to the sun's rays.

Masella has found, on the other hand, that als infected with typhoid and cholera germa ed more rapidly, when they had been previaly exposed to sunshine, as did also those that exposed after inoculation, and under aller doses, than those kept in diffused light, difference was proved to be not due to the perature of the medium, for the fatal effect same in sunshine boxes cooled by a cur-

of water flowing through them.

Experiments by Dr. Max Müller on the effect fever temperature upon the growth and viruce of the typhoid bacillus show that when preed at about 40° C, this microbe takes five intes longer to produce a new generation n when it is kept at a temperature of from to 38° C.—that is, that in the absence of or circumstances, as many as 45 genera-s of typhoid bacilli may proceed in one day a single parent bacillus at the normal perature of the body, while at about 40° 9 such generations may be produced. A r temperature of 40° C, is not, therefore, to destroy the typhoid bacillus, or to affect growth to any considerable extent. Even r temperatures of from 41.5° to 42° C incapable of destroying the microbe, and cid bacilli kept for sixty-two days at 42° C. ed no abatement of their vitality afterward. difference was observed in the virulence of bacillus within the range of temperature of experiments.

in a paper by Dr. John Haldane on the phys-orical effect of black damp as found in two dish collieries, that substance, also called te damp, or stythe, is distinguished from fire mp by not being explosive, while it extin-inces flame; from after damp, by its not being product of an explosion, but as collecting in workings under ordinary conditions; and from white damp, which is capable of supting combustion, while it acts as a poison inhaled. It is found to consist, when unated, of nitrogen containing an admixture of in a seventh to an eighth of a volume of car-nic acid. Air containing just sufficient black in to extinguish a candle or oil lamp prono immediately sensible action on a man. nixture of about 16 per cent, of the black op and 40 per cent, of air would be required produce immediate danger to life. The danauthor concludes, is due to defleiency of year, not to excess of carbonic acid. The t, first appreciable when increasing properons of black damp are breathed, is, however,

due to carbonic acid alone. The capacity of the roots of plants to penerate into living tissues has been investigated by r. George Peirce, who first studied the amount of pressure required to force an iron rod into the

tissue. He then planted rape necessity mustard seed within a spill jedah to -- ; . jet parts of the sotato together again. Aller a reseeds had germinated, and some of the posts had pushed their rootlets down, so as to protrate the substance of the potato. In mone to stances the growth had been so vigorous that the routlet had traversed the whole thirkness of the parenchyma, pierced the hard corky layer of the surface, and reached the damp sandust in which the whole was packed. Anatomical ex-amination of the rest and corresponding putato tissue showed several peculiarities. The posting shoot was almost devoid of the usual conting of hairs; the cells of the potato had undergone alteration, those in immediate evotact with the advancing not being much contested and term while 2 or 3 layers adjacent to the injured elements had undergone division by walls parallel to the long axis of the root, and had submiquently become corky. By this means the intrusive rootlet was inclosed within a corks estinder or sheath, cutting it off more or less perfectly from the living, unharmed tissue of the tube. So far the experiments proved that the thin, delicate, and pointed roots of rape and white mustard are able to penetrate living the sucs. Mr. Peirce carried the matter further by testing the power of the blunt restlets of the pea and vetch, and found that they, too, could pierce the living timue. Other experiments were made on the same plants, with other plant tissues substituted for that of the potato. The results were the same, except that the tissue of rhubarb appeared to be unhealthy to the young plant. Mr. Peirce further succeeded in growing specimens of yea as parasites upon other plants, from the seedling state to flowering. The young pen grown under such unwonted conditions perduced an almost normal root system, with anmerous side branches, but the stem was stanted, although it bore leaves and a few flowers.

POLISH NATIONAL ALLIANCE ganization of Polish citizens in the United States. founded in 1880, with 3 branches, I cach in New York, Philadelphia, and Chicago. In 1895 it included 250 individual serietics, or groups, with a membership of over 10.000. One of the main objects of the Alliance is "to develop, morally and materially, the Polish element in the United States by establishing proque motitus tions, as Polish schools, literaries, immigrations stations, and in general all institutions of benesolence and Polish industries," It is provided that every member joining the Alliance shall endeavor to obtain naturalization papers with the view of becoming a citizen of the Control States, and no member is allowed to belong to any anarchistic, accialistic, or multilistic accounty. The Alliance publishes an official newspaper in thirags, where it also has a museum and library, Among its treasures are many previous relies pertaining to the history, art, and literature of l'oland, and also valuable doruments relating to the history and the literature of the United States. A monument to the memory of the Polish hero Thaddeus Keneiusko will be erreted a Chicago he the Alliance. While strictle a recent lar order, the Alliance, through its ted a duri members, has given much support to the cover

formed Independent Roman Catholic Church.

which see on page 357.

PORTUGAL, a constitutional monarchy in southwestern Europe. The throne is hereditary in the family of Saxe-Coburg-Braganza. The legislative power is vested in the Cortes, consisting of a Chamber of Peers and a Chamber of Deputies. There are 52 hereditary peers remaining. Of the others, 13 are spiritual peers, 50 were elected by delegates of districts and learned bodies, and 139 have been appointed by the crown. The Deputies are elected for four years. 168 by continental districts, the Azores, and Madeira, and 12 by the colonies. The size of both houses and the conditions of representation

have been changed for the future.

The reigning king is Carlos I, born Sept. 28, 1863. The ministry at the beginning of 1895 contained the following members: President of the Council and Minister of Finance, E. R. Hintze Ribeiro; Minister of Foreign Affairs, Carlos Lobo d'Avila; Minister of the Interior, F. F. Pinto Castello Branco; Minister of Justice and Worship, A. d'Azevedo Castello Branco; Minister of War, Col. L. A. Pimentel Pinto; Minister of Marine and the Colonies, J. A. de Brissac dos Neves Ferreira; Minister of Public Works, Commerce, and Industry, Campos Henriques. On Jan. 16 the Minister of Marine resigned, and Capt. Ferreira Almeida was appointed his successor. He in turn resigned on Nov. 25, owing to differences respecting naval reforms, and was succeeded by Jacintho Candido. L. De Soveral succeeded the late Lobo d'Avila as Minister of Foreign Affairs on Sept. 20.

The Army and Navy.—Portugal has a standing army of 30,000 men raised by conscription. The year's contingent was 19,917 men for 1895. The soldiers serve uninterruptedly through the first year, and have four months' leave in the second and eight months' in the third year. About 2,000 men besides are furloughed. The war

effective is about 100,000 men.

The navy consists of 1 ironclad corvette of 2,422 tons, 6 corvettes, 14 gunboats, 5 monitors, 10 sloop gunboats, 2 armed transports, and 4 tor-

pedo bonts.

Commerce.-The value of merchandise imports in 1894 was 35,662,499 milreis, and of experts 23,911,793 milreis. The imports of precrons metals were 826,030, and the exports 3,883,-964 milreis. The principal imports are cereals, cotton, sugar, fish, coal, cotton cloths, iron, wool, animals, hides and leather, silks, machinery, coffee, staves, rice, chemicals, petroleum, spirits, at 1 theren. The values of the leading exports wares Wine, 9.742,000 milreis; cork, 2,955,000 *marov : copq- r. 2,238 milreis : animals, 1,902,000 more a fearts, 537,000 milreis; sardines, 760,000 recommendation goals, 669,000 milreis; onions,

The are 1556 sailing vessels, of 488,000 the bar a the parts in 1884. The merchant that obtain 67 steamers and 486 sailing

Political Events,-The system of parliamendars green and was virtually suspended in 1894, the Common that was elected was not called toget and fittational and other legislation was end + 1 by royal decrees. A series of

decrees were issued on Jan. 13, 1895, concerning taxation, emigration, the army, and other mat ters. One imposed capital punishment on officers convicted of political offenses or rebellion. Another required all persons, natives or foreigners, who leave Portugal by land to take out na ports. On March 31 a decree was published dissolving the Chamber and transforming the electoral system. The number of Deputies was reduced to 120, of whom 114 represented the kingdom and 6 the colonies. Naturalized foreigners were made ineligible, also managers and directors of companies having concessions from the state, and many classes of public functionaries. The Deputies will receive salaries, legal and medical professions must not have more than 20 representatives. The new law does away with the representation of minorities and introduces the system of scrutin de liste. On Sept. 26 a decree was issued effecting change in the Chamber of Peers, which will henceforth consist of 90 life members, in addition to the bishops, the princes of the blood royal, and the hereditary members whose peerages are not yet extinct. The nominated peers may be selected without distinction of class, though certain dis-qualifications are imposed. The elective portion of the Chamber of Peers ceases to exist.

By a decree issued on March 24 the Azores receive autonomous institutions. This conces sion crowns a series of measures for the better

administration of these islands.

During a national feast held in June in celebration of the seven-hundredth birthday of St. Anthony of Padua, who was a native of anarchistic manifestoes were circulated and popular demonstrations against the clergy, and popular demonstrations against the Jesuits, took place. The Anthony of Padua, who was a native of Lisbon, especially against the Jesuits, took place. citizens of Lisbon and other towns, except the Clericals, regarded the festivities with cool in-The democratic papers clamored difference. for the enforcement of the law prohibiting the continuance of religious confraternities. Government issued a circular to the bishops declaring that it would punish severely all attacks upon priests and the Catholic religion, but it would not allow Catholics to make use of r ligion for political objects. King Carlos, who had visited England, arranged to pay a visit in October to his uncle, the King of Italy, but the trip was abandoned when the papal secretary informed the Portuguese Government that the Pope would consider such a visit a personal The Italian Government, when inaffront. formed that the engagement had been canceled for this reason, replied by expressing a hope that Portugal would recover her independence of action. A treaty of commerce between Portugal and Russia was signed at Lisbon on July 9.

The parliamentary elections took place on Nov. The Republicans and Progressists in many districts abstained from voting against the Gov ernment candidates, and the people generally

showed the utmost indifference.

Colonies.—The colonial possessions of Portugal in Africa comprise the Cape Verde Islands. with an area of 1.650 square miles and 110,926 inhabitants; Portuguese Guinea, with an area of 14,000 square miles and 800,000 inhabitants; Princes island and St. Thomas, with an area of 454 square miles and 21,040 inhabitants; Angola,

with Ambriz, Benguela, Mossamedes, and the Portuguese Congo, with an area of 457,500 square miles and 19,400,000 inhabitants; and Portuguese East Africa, with an area of 261,700 square miles and 1,500,000 inhabitants. In Asia Goa has an area of 1,447 square miles and 514,169 inhabitants; Damão and Diu have an area of 158 square miles and 77,454 inhabitants; Macao has 5 square miles of area, with 67,036 inhabitants; and Timor and Kambing have an area of 6,290 square miles, with 300,000 inhabitants.

The aggregate revenue of all the Portuguese colonies in 1895 was 4,926,314 milreis; the expenditure was 5,162,862 milreis. Their total imports in 1891 amounted to 3,939,000 milreis, and their exports to 5,121,000 milreis. There are 161 miles of railroad in Angola and 199 miles more are building; in East Africa 58 miles are completed and 427 miles are projected;

in India there are 50 miles in operation.

The troops regularly maintained in the transmarine possessions are 1 regiment of colonial infantry, exclusively made up of Europeans, consisting of 50 officers and 1,143 men, and 8 battalions of African rifles and 2 companies in Timor, numbering 488 officers and 7,797 men. In consequence of the insurrection of natives at Lourenco Marques its garrison was increased by 34 officers and 603 men (see Cape Colony and South Africa). Subsequently fresh re-enforcements were sent in order to pursue an active

campaign against Gungunhama. Following upon the disturbances in South Africa there was in September, 1895, an outbreak in the Portuguese portion of the island of Troops that marched against the rebels were defeated, and the Secretary and 3 agents of the Government were killed. The Governor et out with fresh troops and eventually quelled the insurrection. In the same month a mutiny occurred among troops about to embark for Fast Africa, because the Administrator, Gomez da Costa, would not guarantee their pay. The force, 500 in number, marched off with their arms and ammunition. The revolt spread, and troops were sent from Portugal to suppress it. The English Government offered to lend troops to put down the rebellion, as it had offered before in the case of the insurrection at Delagoa Bay, and the Portuguese Government again declined assistance. All men between the ages of ixteen and forty-five were summoned to the defense of the capital on pain of being treated as rebels if they did not report for duty. An expedition was sent from Portugal to bring the rebels to terms.

In East Africa the Portuguese column commanded by Col. Galhardo attacked Gungunhama's army on Nov. 5, and routed the natives with great slaughter. On Nov. 11 the Portuguese forces captured and destroyed Gungunhama's

PRESBYTERIANS. 1. Presbyterian Church in the United States of America.—The statistical tables of this Church presented to the General Assembly in May give the following footings: Number of synods, 31; of local eyengelists, 215; of candidates, 1477; of local evangelists, 215; of heavitates, 474; of churches, 7,496; of churches organized during the year, 176; of communicants.

922,904; of members added during the care in examination, 67,639, of taptients 3 27 and adults and 27,731 of infants of the arts. Sunday wheels, 964,700, amount if on the thone for home missions \$30: 20 te ter missions, \$112 w. . for education \$214 as. i. Sunday ochool work \$133,000, for charth rece tion, \$217,824, for the Belief fund \$52 may to the freedmen, \$111,445; for example al and \$75 265; for aid for colleges, \$145,564; for the free eral Assembly, etc., \$99,239, congregational contributions, \$9,921,141; miscellaneous, \$927. ino; total contributions, \$12.647.579 The name ber of communicants is 6,917 greater, and the total amount of contributions \$364.548 less than in 1894. Record to made in the tables of \$15 it censures, 273 ordinations, and 302 metallations of ministers during the year, and the number of elders is given as 26,500 and of deacure as 9.058

The receipts of the Board of Home Missions, \$604,200, were larger than those of any previous year except 1893, when a large legacy was received. Yet the debt of the board had never been larger than now. Seventeen hundred and thirty-one laborers had been employed. The schools in the Alaskan, Indian, Mexican. Mormon, and mountain departments numbered 114.

with 391 teachers and 0,466 pupols.

The Board of Education reported that a larger number of recommendations had been received during the year than in any precision tour in its history. The whole number of students accepted and enrolled had been 1.002, of whom 316 were new men. The income from churches and Sunday schools—about \$20,000 had been nearly \$2,000 greater than in the year ted us. The permanent fund yielded about \$8,000.

The Board of Church Erection had received 225 applications, 11 more than in the previous year, but as fewer large sums had been solved for, the aggregate demand — \$150,852 was smaller. The entire receipts had been \$255,552 and the expenditures \$155,184. There had been reported to the board during the year as completed through its aid without debt 182 cheredien and manses, the total value of which was mossife \$250,000.

The Board of Relief had had nevice its care 785 cases of ministers, widows of ministers, with the second state of phan families of ministers with a ministers with the Ministers Home at Perth Amber, N. J. The income for the year had been \$171.618, and the expectaliture \$178.140. The estimated value of baxes of supplies soil to families in the real by various churches and ministers was \$4,535. The permanent fund aggregated \$1.654.865.

The learn of Missister to Freedown had received \$170.00, or \$5.270 more than in the previous year, and had expended \$162.704. The delt had been reduced to \$22.351. There were returned as visible results of its work 125 missimaries, 9 white and 166 volored, 257 issuitary, (but churches, with 17.082 communicants, 206 Satisath achoods, with 19.764 papels, other schemis, 7, with 10.529 papels.

The Board of Publication and Sabbath Schools had kept in the field 83 permanent missions of the and 12 auxiliaries laboring in the state of through whose agency and the stimulus

grants 1,446 schools had been organized or reorganized, into which 5,455 teachers and 44,004 pupils had been gathered and from which 50 churches had already grown. The year's profits of the business department amounted to \$36,800. The editorial department had issued 22 books and tracts. The Sabbath-school department returned 7,283 Sabbath schools, with 977,822 offi-

cers, teachers, and pupils.

The Committee on Systematic Beneficence, for the first time since its organization, in 1879, reported a decrease in gifts to benevolent objects, the amount of decrease as compared with the previous year being \$44,829. The Boards of Home Missions, Foreign Missions, Sabbathschool Work, and Aid for Colleges and Academies reported gains aggregating \$123,650; while those of Education, Church Erection, Ministerial Relief, and Freedmen returned losses of

\$168,479.

The Board of Foreign Missions had received \$865,709, while its expenditures had been \$976,-885, as against \$995,922 in the preceding year. Forty-three new missionaries had been sent out. From the mission fields in Africa, China, Guatemala, India, Japan, Korea, Mexico, Persia, Siam, South America, Syria, and among the Chinese and Japanese in the United States were returned 116 principal stations and 583 out stations; 659 American missionaries (including ordained and medical missionaries, lay teachers, and others), 1,943 native missionaries, teachers, and helpers; 391 churches with 32,104 communicants (3,772 having been added during the year); 109 students for the ministry; 30,452 pupils in schools, boarding and day and for boys and for girls; native contributions of \$65,828; and 33 hospitals and dispensaries, at which 256,514 patients were treated during the year.

The receipts of the Woman's Executive Committee of Home Missions for the year had been \$367,333, and the disbursements \$363,515. debt at the beginning of the year was \$10,000. The report of the superintendent of schools described the work done-in Alaska, 8 schools and 37 teachers; among the Indians, 24 schools and 140 teachers, reaching 31 tribes; among the Mexican population of the border region, 27 schools and 53 teachers; among the Mormons, 30 schools and 84 teachers; and among the mountain people of the South, 25 schools and 77 teachers. In these 114 schools, with 391 teachers, were enrolled 1,640 pupils as boarders, while 7,828 pupils were attending the day

while and 6,377 pupils the Sunday schools connected with the day schools.

The one hundred and seventh General Assemby from Church met in Pittsburg, Pa., May 16.
Fig. II a Dr. Robert Russell Booth, of New York, and chosen moderator. The committee apaint illy the previous General Assembly to of a chip to theological seminaries reported Prince a Metormick, Auburn, Western, Lanco Ingris: San Francisco Seminaries, and these leads that the clauses in its recommentation them in the matter of putting themeters to the distributed with the control of the torses. Assembly which covered those several points were not intended to change the

title, ownership, or disposition of the property held by the various institutions or to confe any right of control or interference upon the General Assembly, but only to make sure that the property was held for no other purposes than theological education according to the standards of the Presbyterian Church; that the powers sought to be conferred on the General Assembly of passing upon the election of professors in the seminaries by approval or disapproval were no more than it now possessed over a majority of the seminaries; and that certain other conditions asked in respect to the election of professors simply corresponded in substance and effect with what was known as the agree-

ment of 1870.

The seminaries of Omaha and Dubuque had adopted all the recommendations of the General Assembly. The directors and trustees of Prince ton Seminary acquiesced in and were in full sympathy with the sentiment of the resolutions, but were advised by their counsel that the charter of the seminary embodied substantially all that the Assembly was seeking to accomplis Yet they would consent to an amendment if the Assembly still wished it. [The Assembly ad-Assembly still wished it. [The Assembly arrived amendment "in order to put the matter beyond all possible question."] The Board of Western Seminary, Allegheny, Pa., considered that seminary already in the position which the Assembly was seeking to establish. The directors of Danville Seminary had resolved to adopt the recommendations as to by-laws as a part of their constitution, but feared that their charter could not be amended without danger of forfeiture. [The Assembly requested the board to secure such legislation as they could without imperiling their charter.] The seminary San Francisco being under synodical control, it was deemed best to defer action until after the next meeting of the synod. Lane Seminary, at Cincinnati, had been visited by a subcommitte who found the trustees ready to do all in their power to bring the institution into closer rela-tions with the Church. The report of the committee and its recommendations, with the following resolutions, were adopted by a vote of 432

1. That it is the sense of the Assembly that the As sembly of 1894 did not intend to prepare the way for any change in the tenure or management of the propcrty of the seminaries or to do anything which can affect the autonomy of the seminaries, and that the said recommendations were intended to have the meaning and effect as recited in this committee's report. This Assembly, in reaffirming the resolution of the Assembly of 1894, does so with the avowed purpose of leaving the tenure and title to all proper of the seminaries exactly where they are now, in the hands of various boards of trustees, and with the further purpose of securing the veto power to the Assembly, as an effective force by charter provision and of safeguarding by charter declaration, the trust held and to be held by boards of trustees against perversion or misuse.

2. That this General Assembly reaffirms the action of the Assembly of 1894, and, in view of the progress made and the importance of the interests involved, declares that in its judgment the effort should be continued to secure the adoption in substance of the

Assembly's plan by all the seminaries.

3. That a committee be appointed to have further charge of this matter, and to make report to the next General Assembly.

The committee was further requested to inquire into and report to the next General Assembly as to the rights of the Church in the property now held by the Union Seminary in lew York, and to recommend what measures should be taken to enforce them.

The Committee on Church Unity reported:

The action of the last Assembly with reference to the correspondence with a Protestant Episcopal combision was transmitted to the commission, and since that your committee has addressed nothing to it. The maintee's letter and assured us that it would be maintee's letter and assured us that it would be mid-before the General Convention which meets in Guisber. They add for themselves that they regard the action of the General Assembly as an expression of a desire on its part that all negotiations between the two bodies shall cease. For the purpose of correcting this erroneous interpretation of the action of the last General Assembly, your committee propose to write to the commission to the effect that the tearnal Assembly by its action did not direct that all negotiations shall cease, but that they be sunded until the General Convention shall take action upon the subject of mutual recognition and recipiedly referred to by the resolutions of the Assembly.

The General Assembly of 1894 postponed the condistribution of the plan of federation which this committee had reported to it until this year, and sent
the plan down to the presbyteries for information
and advice. The motion to transmit it to the presyteries did not originate with the committee; it
mae from the floor of the Assembly. The stated
text of the Assembly has furnished the committee
with the reports from the presbytery. One hundred
and ninety-three have been reported as having taken
ation on the plan. Of these, 50 expressed their disproval of the plan, without giving any reasons or
tring any advice; 17 have disapproved, accommanying their disapproval with reasons for their acmice; 22 expressed themselves out of sympathy with
the movement, 2 of them recommending its disconmanager of the plan; 100 give their approval to the
plan. If of them, however, taking exception to the
plan-representation provision and suggesting the
mandment of that; 32 have either taken no action
their action has not been reported; 11 have been

It thus appears that a majority of all whose action been reported have approved of the plan, and that a majority of the whole number of presbyteries the roll are in sympathy with the federation avenuent, a large number of these who object to have features in the pending plan desiring the negative of the second of the pending plan desiring the negative of the plan and the

rederation, it is thus manifest, has a strong hold upon the mind of the Church. This General Assaubly could not, if dissatisfied with the reported in, summarily discontinue the negotiations with the other churches; for its predecessor of 1890 not ally unanimously committed the Church to the ovenent, but directed its committee to invite the alter churches to enter it; and it would be a pointed discourtesy at once to terminate the negotiations because of dissatisfaction with the first plan agreed upon by the committees without a further effort to reach a mannious agreement, nor would such a course meet with the appears that the sentiment in favor of the jetidiary plan is widespread and decided. A majority of the string presbyteries have approved of it, some, however, taking exception to the rule of representation that the plan contains; and all who disapproved the plan and give the reasons, while differing on the points, agree in opposing that feature of it.

The committee could not, in courtesy to the committee committee could not, in courtesy to the committee.

agreed upon this personnetal the farines I should to declare in favor of a change of the parameter of the parameter and and a factor the Assembly, would greatly meaningle the minimum. The highest judicular as of two id the segret churches have adopted the plant as at electric Texand has also elected its designates to the Indica-Council. The terminal by soid of the Protect in formed Church in America has also adopted of and trainessitted it to the chance perchateries for these reasonities is to the consens precognitive my time action, and a majority of these classes have rail find the adoption. One of the sensities healing, the formeral Synod of the Referenced Productorian Church, has alon adopted the plan An amendment been of any particular, or the declaration that an amendment of deviced, would compare a recommendated on thousand budies, involve further everforces on the part of the committees, and so delay the o secumentalism of the committees, and so occay the organismmone of the movement. The committee agreed to the organism of representation, because in all other federations with which it was familiar that rule prevailed. If, however, the majority of the members of the tien-eral Assembly desired amendments, the somewither would seek to secure what would be amountable to all the churches.

Recalling the fact that the General Assembly of the (Southern) Presbyterian Church in the United States at its quarter-centennial sussion in Augusta, Ga., in 1886, had addressed a fracternal letter to the Assembly, "which was marked by expressions of kindly regard and sympathy, the Assembly, upon the recommendation of its Committee of Correspondence, on this quarter-centennial of the reunited northern Church sent a responsive fraternal letter to the Southern Presbyterian General Assembly, in session at Dallas, Texas, in which it said, regarding organic union";

We would stir up your pure minds by way of somembrance touching the attitude which we have steadily maintained for years toward that organic union which would make us one in fact as well as in faith. While we do not propose to press thus throught unduly upon your minds and hearts, we be desire again to assure you of our resolutions to recognisate any advances which you may be ind to make in this direction under the guidances of thrist, who proposed that we may be one.

To an overture from the Preshytery of New York, asking instructions in relation to its daily toward students applying to be taken under its care who are pursoing or purpose to pursue their studies in theological semination respecting whose teaching the General Assembly disavous responsibility, answer was returned;

We recognize the general principle that a young man should stand on his merits as revealed by each amination for entrance into the Preshyberian minutes.

If y, yet.

If is the genius of the whole Preschibiterian eyetern to educate its nonnintern through executal training and producted aspections. "and be make affecting provision that all who are admitted as training house south! In the faith." Form of the th. met. Lathage 8.y.

If the Book requires that "energy in extraordinary cases," ladies licenseave the entidodate "shall have studied divinity of load fore poors utakes some approach divine or professor of theology." From of

approach divide of percentage of them to the series of the first s

most proper and advantageous; so as eventually to bring them into the ministry well furnished for their work." (Baird's Digest, p. 398.)

IV. The General Assembly of 1894 affirmed that it is the privilege of the presbytery to direct "the education of their students within reasonable limits in schools approved by the General Assembly, and to proceed by the grantage at institutions disamproved. probabit their attendance at institutions disapproved by the same. Min., 1894, p. 125.)

Therefore, inasmuch as obedience to the constitution of the Church is obligatory on all presbyteries, we recomment that in accordance with the provisions of the Form of Government above cited the Presbytery of New York be instructed and enjoined not to receive under its care for licensure students who are pursuing or purpose to pursue their studies in the dozical seminaries respecting whose teaching the General Assembly disavows responsibility.

A special committee was appointed to consider the whole subject of young people's societies and their relations to the Church, and report to the next General Assembly. Concerning the general finance of the Church and its beards, the Committee on Systematic Benevolence reported

That the decrease in receipts was much smaller. considering the crippled finances of the country and of the Church, than might have been reasonably expected, and advised that an apportionment be made to the different presbyteries of the various amounts recommended by the Assembly, including all the agencies of the Church; this apportionment should be based upon the average percentage of the congregational expenses and total offerings made by the presbyteries during the past two years, less bequests.

A minute was adopted, in view of a recent session of Congress on Sunday, protesting against "the legislative branch of the Government of the people of the United States at any time violating the law of God by meeting or continuing in session on the Sabbath day." The Assembly recommended:

That citizens of the United States who feel justly aggrieved by the action of the late Congress in reaggreesed by the action of the late Congress in re-maining in session on the Lord's Day be requested and urged to send petitions to both Houses of Con-gress, petitioning the Congress of the United States to have respect unto the God of the universe by observing his law touching the proper observance of the Sabbath day.

The report on temperance, besides reaffirming the previous temperance deliverances of the assemblies "in unbroken line for more than eighty years," urged the importance of endeavoring to secure the election and appointment to efficial position of men of clean records on the subject: recommended the more diligent instruction of children and youth upon it; and expressed the judgment of the Assembly that

I have the come when Christian men should e, and that all voters connected with are arged to vote against the granting

the people the desirability of de-

The people the desirability of demand of the liquor law as it and declaring that

We say to the Church of Jesus appearance of evil, and less as appearance of evil, and less as the communion table to the communion table table

The present year was the twenty-fifth year of the existence of this, the reunited Presbyterian Church as a single body, after a division that had lasted many years into two branches, popularly known severally as the Old School and the New School General Assemblies, the union having been formally consummated in 1870, in the Third Presbyterian Church of Pittsburg, Pa., the same church in which the present General Assembly was held. An evening session on Thursday, May 23, was devoted to the celebration of the "silver wedding of the United Church." Addresses wedding of the United Children System of Doctrine," by President Francis L. Patten, of Princeton University; "The Influence of the Presbyterian Church upon Other Churches," by President Henry M. Booth, of Auburn Theological Seminary: and "The Growth and Future of the United Church," by W. H. Roberts, D. D., Stated Clerk of the General Assembly. Dr. Roberts's paper contained a history of the union and a view of the growth of the Church since it was effected. Of the history, it said

The Presbyterian Church in the United States of America was divided into two bodies in 1838, in part by theological differences, but mainly upon issues of policy and administration. The Presbyterian Churches generally have never divided upon doctrinal questions, the wedge of division has always had as its keen and separating edge some practical question which all persons can understand and with which all are in some manner connected. In 18 the Presbyterian Church of its missionary work through agencies under its own control. That question was settled for the Old School Church by the creation of the Presbyterian Board of Foreign Missions in 1838, and by the New School Church in 1862, by the establishment, in response to the demands of its ministers and members, of the Permanent Committee of Home Missions. This action was the initial step in reunion, for it was the full acceptance on the part of the New School of the principle. that the Church must control its own agencies. This decisive act was followed four years later by a proposal for reunion made by the New School Assembly, a proposal received by the Old School Assembly in the fraternal spirit which prompted it. The negotiations were carried forward by committees appointed by the General Assemblies of both Churche until May, 1869, when the two Assemblies, convened in the city of New York, sent down what is called the "basis of union" to the presbyteries for their consideration. The answers to this overture were reported at Pittsburg, Pa., at an adjourned meeting held in this Third Church in November, 1869. The vote of the presbyteries upon the overture was 239 in the affirmative to 3 in the negative, all the New School presbyteries voting in favor of the union. On Nov. 12 the two Assemblies, led by those saintly and now sainted men, Melanchthon W. Jacobus and Philemon Halstead Fowler, entered arm in arm into this historic edifice and proclaimed, in the name of God, the reunion of the two branches of the Church. The completion of reunion was followed by the gathering of the commissioners and officers of the two Assemblies into what was known as the Reunion Convention.

Since that time the Church has prospered in a marked degree in nearly all the departments of church activity, as shown, first, by the statistics of organizations and persons. The local churches, instead of being diminished by the union of the two bodies, increased from 4,526 in 1870 to 7,387 in 1894. Ordained ministers, who numbered in 1870 4,238, were in 1894 6,641. The communicants, in 1870 446,561, increased in the quarter century to 895,997, an incashers, and officers of the Sabbath schools during the same period advanced numerically from 445,557 to 951,192, an increase of 112 per cent. Rext, the statistics of contributions. The contribu-

Next, the statistics of contributions. The contributions for congregational purposes were in 1870 \$6,414,5-185, and in 1894 \$10.300,761. The contributions for icellaneous benevolent work, in 1870 \$690,636, rose 1894 to \$1,025,695, and those to the boards of the contributions to the boards can be advance in the interpolations to the boards can best be appreciated the fact that the sum recommended by the Genlaneously to be contributed for the interests of of the boards in 1894 was within \$50,000 of the total of all contributions to all the boards in

The total contributions to the benevolent agencies the Church for the period as reported in the Minne of General Assembly, were as follow: Home cless, \$15,320,520; foreign missions, \$13,526,544 (assion, \$4,434,054; publication and Sunday-tool work, \$1,538,836; church erection, \$2,618,723; \$4,507,155; freedmen, \$1,953,960; aid for colstant of the co

In addition to the contributions to the boards the change of \$24,280,002 to miscellane-benevolence and \$192,044,780 to congregational contributions of \$263,-

aring the quarter century the Church had ehiefly through the Board of Aid for Cold Academies, established in 1883, in the blishment of more than 40 institutions of raing; the Sabbath-school department of Board of Publication had been reorganized; ard of Church Erection had aided in the Board of Unuren Erection mad annual value cearly \$12,000,000; the Board of Home loss had spent fully \$10,000,000 west of the simippi, and the region, virtually unoccupied 70 except in Missouri, was now dotted with syterian churches; the Woman's Board ne into existence and developed its work in this period. While the total number of ples in the foreign missions was less than in 1870, there were added to the Church s single year 1894 8,141 converts, and the ical missions were caring for the bodies as as the souls of men. The number of theoal seminaries had been increased by 8, the or of their students had been doubled, and financial resources had been quadrupled. within the denomination was formed in The establishment of delphia in 1870. Woman's Foreign Missionary Society was d in time by the organization of 5 other illar societies in different parts of the Church. Woman's Executive Committee of Home was organized in 1878, and the work of missions among the freedmen was assigned is care in 1885. The women's societies had tributed the sum of \$630,000 to home and sign missionary work. From 1870 to 1894 10,549 persons, of whom 362,344 were adults. added to the Church on profession of faith: 369,844 adults and 515,559 infants were

II. Presbyterian Church in the United States. - The following is a summary of the statistics of this Church, which were presented to the General Assembly in May: Number of synoda, 18; of presbyteries, 74; of ministers, 1,337; of candidates, 425; of licentiates, 79; of churches, 2,776; of churches organized, 39; of communicante, 203,999; of members added during the year on examination, 13,50m; of hap-tisms, 5,031 of adults and 5,502 of infants; of baptized noncommunicante, 35,346; of teachers in Sunday schools and Hible classes, 18,204; of pupils in the same, 136,069. Amounts of contributions: For Assembly's home missions, \$22, 760; for local home missions, \$50,362; for the invalid fund, \$13,256; for foreign missions, \$111,877; for education, \$51,848; for publication, \$7,469; for colored erangelization, \$5,625; for the Bible cause, \$4,422; presbyterial condrabutions, \$14,073; for pastors salaries, \$772,795; congregational contributions, \$667,152; miscelling lancous, \$96,481; total contributions, \$1,990,196. The number of communicants is 4,822 greater, and the total amount of contributions \$0.673 less than in 1894. The reports also record 60 licensures, 67 ordinations, and 138 imitalistsons of ministers, and give the number of ruling elders as 8,484 and of deacons as 6,865.

The total receipts for the year of the Executive Committee on Education had been \$22,365. Two hundred and forty-two candidates were assisted in sums of from \$25 to \$75 each.

The Executive Committee of Publication reported total net assets of \$103,849. Ten colpusteurs had been employed, who had distributed books and tracts valued at \$7,423. The publishing department had sent cost 122,000 copies of books, tracts, etc. Forty-three publications had been issued, 11 of which were new.

The Executive Committee of Home Missions. returned its total income for the year as having been \$48,877. The receipts for the home mission department had been \$22,867, of which \$20,095 had been expended in the support of #6 ministers and 2 candidates. Seven teachers had also been supported. The receipts for the incolid fund had been \$12,521. One hundred and thirty-four cases had been aided. From the regular loan fund, which was instituted by the Assembly of 1886, \$6,525 had been loaned to 47 white congregations and \$255 to 5 redored cumgregations, to aid in the erection or requir of church buildings. The total amount loaned up to March 31, 1895, had been \$6,780, of which \$2,683 had been paid. From the William A, Moore fund of \$5,000, left to be loaned at 3 per cent, to feeble congregations to reable them to erect houses of worship, \$1.330 had been leaned during the year to 5 churches, The amount loaned had been \$3,000 to 11 congregations.

Reports were made of 3 theological seminaries—viz., Union Seminary, Virginia, 5 professors and 70 students; the divinity school of Southwestern Presbyterian University, 6 professors and 30 students; Louisville Seminary, 6 professors and 32 students; Columbia Seminary, 5 students; Austin Seminary, no particulars.

The Executive Committee on Colored Evangelization, in its fourth annual report, returned the expenditure for the year as having been \$3,200, and reported that \$1,211 were in the treasury. The work of the committee and of the Institute for Training Colored Ministers, at Tuscaloosa, Ala., had been hampered for lack of funds. A tract of 300 acres of land had been obtained, on which a building for church and school purposes was in course of erection. committee hoped to be able to begin at an early day a more commodious building for school and dormitory purposes; also machine and carpenters shops, blacksmith shops, brickyards, sawmills, and other needed improvements. At least \$6,000 were needed to get the school into proper condition. Many of the best students coming to the institute were married men, some of them with large families.

The Assembly's Home and School, at Fredericksburg, Va., returned assets of \$27,750, which were \$14,100 in excess of indebtedness. The object of this institution is to maintain and educate the orphans of ministers, the children of the foreign missionaries who have to be sent home for education, and the children of the home missionaries who labor in fields destitute of educational facilities upon salaries insufficient for the education of their children.

A training school, designed to give a "Scriptural and sensible method of training for Christian work, especially for young women who desire to be fitted for home or foreign missionaries," was to be opened at Fredericksburg

in September, 1895.

The receipts for foreign missions were \$132,-333, or \$9,106 less than the receipts of the previous year, and the disbursements exceeded the receipts by \$1,377. The fiscal year had closed without debt and leaving a balance in the treasury, including the Congo Boat fund, of \$16,865. Twelve new missionaries had been sent out, 2 missionaries had died, and 5 had returned to the United States. On account of dissensions that had occurred there, the Cuba mission had been suspended for the present. A project for building a boat for the use of the missions on the Congo river, for which \$10,380 had been contributed had been delayed till the need for the boat became more evident.

The General Assembly met at Dallas, Texas, May 16. The Rev. C. R. Hemphill, D. D., of Louisville, Ky., was unanimously chosen modcrator. A number of overtures were presented on the subject of organic union with the Northern Church, some of which asked for the aptestiment of a committee of 9 to confer with a at Church, while a varie-It of the were expressed in the others. To the a reply, unanimously adopted, was re-" 12 the these questions at this time, and is the these questions at this time, and this to relate sentiments of sincere regardless of the relation affection for that honored the first of the great Presbyterian Church, with who we to have the closest fraternal relations. After any read from the Franco-Arms vy First Patien Society, asking for eringathy at the aragement in its efforts, in reply to a " 'ca womate was adopted recording and pulsastate; the tember lave of the Assem-

bly to the Huguenot Church in France, commending it to the prayers, sympathies, and help of the people," and inviting the stronger churches to contribute regularly to the Franco-American commission. An invitation having been received from a committee of the Synod of New Jersey to participate in the celebration June 4, 1895, of the earliest meeting of a presbytery in the United States, which took place near Monmouth, N. J., in 1706, the Assembly expressed its great interest in all matters concerning the founding and early struggles of the Presbyterians in this country, and named delegates to attend the celebration at their own expense. On the subject of the organization of an independent colored Presbyterian Church, the Assembly declared that the ultimate carrying out of such a measure had always been the policy of the Church. During the past five years steady progress had been made toward this goal. The question of organization was referred to the presbyteries and synods concerned for such action as they might see proper. If their concurrence is obtained, and if the funds raised justify such organization in the judgment of the Committee of Colored Evangelization, a special committee was authorized to determine the time and place for effecting the organization and represent the Assembly in the proceedings. A report on young people's societies was adopted with a constitution and form of government. The action of the previous Assembly declining to forbid affiliation with the societies of other Churches and enjoining the sessions to maintain a careful oversight of the nature and influence of such associations was reiterated. A special warning was given "against the danger to which young and inexperienced persons are exposed from attendance upon large and promiscuous conventions which are not under ecclesiastical control." The Committee of Education was authorized to grant aid to unmarried women who are under the care of the Committee of Foreign Missions while pursuing their studies in the training schools of the Church. The standing Committee on the Sabbath reported that only a few presbyteries mentioned improvement in their reports; that a general survey of the field showed a "downgrade" movement; that the growing tendency among Christians to admit the secular spirit into their homes was to be deplored; and that it was a matter of deep regret that so wide a difference exists among Christians as to what constitute lawful and unlawful works on the Sabbath day. The Permanent Committee on the Sabbath, which was commissioned by the previous General Assembly to consider the whole question of Sabbath observance under the changed conditions of modern life, reported that.

The general trend is in the direction of looser views and practices, and that whatever may be affirmed by God's people the day is unmistakably losing its hold upon the masses. If, however, in this respect the line was sharply drawn between the Churches and the world, if the demoralization and the decline were confined simply to the outside world, there would be little or no ground for uneasiness; but, unfortunately, this is not the case. The spirit of indifference is likewise invading the ranks of the Church. There is a large class among all denomina-

tions . . . who, with the exception of business and the more servile forms of labor, would not scruple to use the Salibath as any other day, especially in the direction of recreation and pleasure. . . It is this seeming indifference as well as palpable disloyally to the day on the part of so many of its protessed friends that so much emboldens the world in setting saide its authority. Only let the Churches and Christian people be true to their professions and the chemics of the Lord will never be able to shake, much less overturn this stronghold of Christianity. If ever overthrown, it will be more through the perfidy of its friends than the assaults of its foes. Not until all the different denominations of Christians stand aboulder to shoulder in the breach and unitedly maintain the absolute and perpetual sanctity of this day of the Lord can we really and truly expect the outside world to render that reverence and respect which are justly its due.

In answer to an overture from the Presbytery I Macon complaining of the employment of hired and professional singers in the churches the Assembly referred the presbytery to the paragraph in the Book of Church Order, in which the power of the church session is defined, and the session of each church is directed "to take the oversight of the singing in the public worship of God," and enjoined such oversight by sessions as would make the music conform to the Church standards. The Assembly reiterated the deliverances of previous Assemblies on the subject of temperance, and "without any reference to the political aspect of the temperance reform," urged upon all Christians "the duty of using all legitimate means to promote the cause of good citizenship, especially by refusing to be identified with the liquor traffic"; and deprecated the inconsistency "of professing Christians who rent their property for immoral purposes." A letter of fraternal greeting was sent to the Northern General Asembly, in which, after congratulating that body upon attaining the twenty-fifth anniversary of the United Church, the Assembly said :

We are fully one with you in all the fundamental constituents of the holy Catholic Church. Most expecially, brethren beloved, we thank you for that truly fratemal spirit and delicate appreciation of our spirit which makes your letter so very precious and so fragrant to us. Let us walk together in full fratemity of love and sympathy in all the great numberless things in which we are agreed, and thus be encouraged to pray and hope that if in anything we differ God may reveal even that unto us and take away every blemish.

III. United Presbyterian Church in North America.—The statistical tables of this Church for 1895 give it 801 ministers, 895 churches, and 106,755 communicants,

The missions in India were carried on at 11 mission centers or districts, with 11 ordained American missionaries, 13 single women, 2 women medical missionaries, 6 native ministers, 193 other native helpers, 3,058 communicant members, and 3,289 haptized adults, making a total of 6,347 haptized members; and 126 schools, with 4,600 pupils. The contributions by natives directly for Church purposes were \$442. More than 30,000 patients—old and new—were treated in the hospitals. The mission in Egypt returned 15 ordained American missionaries and their wives and 8 unmarried woman missionaries and aries; 33 organized congregations, 19 of which

had native pastors, while work was at a m 134 other places; 4,554 members to an 1,569 were western, and 560 were as a 1894; 21 licentiates and 9 students of the get 1894; 21 licentiates and 9 students of the get 110 Sabbath schools with 5,265 papels and 119 week-day schools with 7,975 papels. The radius members had contributed \$11,560, and had jubb more than \$17,000 for tuition etc. The fact was noticed that the proportion of femals members to male members was increasing from year to year.

The General Assembly met in Pittshurg, Pa., May 22. The Rev. J. B. McNichael, D. D. was chosen moderator. An organ having been med during the services at the opening of the Assembly, the Rev. Dr. J. G. Carsen, who had been one of the most active opposents of the televation of instrumental music in worship, and who had signed a protest against the action of the Assembly in 1883 permitting it as well as either protests on the subject, asked leave to change his protests into a dissent.

He said that he had s good the protests in good faith and with the convection that he was under of gations to preserve his efforts to have the Charles en truce its steps, and also that in the event of his far use to do this he might feel eventra and to wal draw from the Church The time had new rome when he must decide With his presents on runn be was according to his consists as restrained from tal ag part in worship when the instrument was used. He found himself alone, his beethern of his save did found filmself acces, no between or he is ever one not feel constrained to refuse to join in our versal guinder present circumstances. He was now my the separate himself from the Church. It was the jet a lege of every member to enter his almost from any action taken, thus freeing has comsensure we hand the sense of obligation to preserve his expension or to reparate himself. There was now an hom of has my the Church change its course on this salant said he wished to be in a precision to and has treet our a wise ship and work. His protest was endered on the more

An appeal against the action of the brazed of Ohio confirming the decision of the lower courts was made by Mr. J. K. Andrew who had been suspended by the session of the thurst su Law donderry, Ohio, for "making determined copposition to one of the principles of the I mind Presbyterian Church, via that the first day of the week is the holy Saldath," The Assembly decided that "the complained to 1 . para against his own public profession are against the public profession of the thursts, can class no standing in the Church." The tam it is an Union with the Hullard Christian Referenced Church reported as the result of a conference with the committee of that Cherch and of a statement of its dectrines and mages that there appeared to be a substantial agreement between the two thurshes even to the details of their distinctive principles. But as there was a differchie if nationality and of hosteric life an ergame up a was not me practicable. Instead thereof a plan of full mutual recognition was proposed, providing for a constant interchange of fraternal delegates, for the exchange of palpare he ministers, for liberte in everyty attent of cither twelv to call minuters from the other, for milia recognition of certificates of membership and for congression in mission work. The triplet was adopted, and a committee was apjounted to visit the Holland Syned of 1406. The

canvass of the votes of the presbyteries on the two overtures concerning control by the General Assembly over the theological seminaries, which had been sent down in the previous year, showed that both overtures had been adopted by very large majorities. The overtures were:

1 Shall the General Assembly have the veto power in the election of professors in our theological seminames !

2 Shall the General Assembly have the power to remove a professor for unsoundness in the faith !

The overtures were declared enacted as a part of the constitutional law of the Church, to be entered as such in the Book of Government on the approval by the presbyteries of the necessary changes to be made in that book, provided that this action was not to be taken as interfering with the vested rights of synods exercising control over existing seminaries further than may be indicated in the language of the overtures themselves. It was ordered that the directors of the seminaries be required to report annually on all matters coming under the oversight of the Assembly. A committee was appointed to negotiate with the synods having control of theological seminaries with a view to the adjustment of any apparent or alleged discrepancies between this action and their charternal rights.

IV. Reformed Presbyterian Church.-The Synod of the Reformed Presbyterian Church in North America met at Denver, Col., June 6. Rev. J. Milligan Wylie, of Denver, was chosen The condition of the mission in moderator. Turkey, which was embarrassed by opposition of the officers of the Government, was considered. The subject of the appointment of missionaries to China, decided upon three years before, but not yet carried into execution, was referred to the Board of Foreign Missions. More than \$4,000 had been deposited in the treasury for the purpose of this work. The report on national reform recognized in the society called the National Reform Association, an organization which aimed to provide a way by which all who favor such a radical change in the Constitution of the United States as will make it distinctively Christian and yet are not prepared to accept the Covenanter Church's position of political dissent, "can consistently co-operate in a common effort to bring this nation into acknowledged subjection to Christ." The association was therefore recommended to the continued and hearty support of the members of the Church, and \$7,000 was appropriated to assist in its work. The report on "Testimony bearing," or the declaration of political dissent, showed that the work had been carried on with vigor, and the appendment of Dr. McFarland as the Synod's e into on the subject was continued. A report or is teration with the Woman's Christian Temps rame Union, the Young Men's Christian Association, the Christian Endeavor societies, es , resignized such hodies as evidently the outgreet and the Christian religion and the result of the sent appearation, and as calling for the cooperator of all Christians "so far as they are right as in their objects and the means used in their presention. Yet, masmuch as the Synod Yet, masmuch as the Synod condemned entirely "the use of uninspired palmoly in the worship of God" it recom-

mended that the people of the Church be warned when taking part in conventions for moral reform and other purposes where human compositions are used in praise not to participate in their use; and that the influence of the Synod be used so far as possible to have an "inspired Psal-mody" used in all these conventions. The Theological Seminary was declared open for godly women who desire to fit themselves for missionary or evangelistic work. The resolution is interpreted as not contemplating the licensing and ordaining of women to preach the Gospel, but the better qualification of those who do missionary work at home or abroad for their calling. Thanks were voted to the Government of the United States for protection given to the missionaries in Turkey. Efforts to bring the mission churches in Syria to a standard of self-support were advised.

V. Cumberland Presbyterian Church,-This Church returns for 1895 1,704 ministers. 2,884 churches, and 193,393 communicants. The Cumberland Presbyterian Church, Colored, has 400 ministers, 250 churches, and 13,250 members.

The receipts of the Board of Education for the year had been \$10,092, or \$1,605 more than in the previous year. The number of probationers in schools of all grades was returned as 225.

The Board of Publication reported that the indebtedness of the publishing house had been reduced by about \$4,000, while \$14,782 were due it, and that the net gain of the year was more than \$3,000. The sales amounted to \$10.981.

Of the recorded Christian Endeavor societies 550 in number, with a probable membership of 16,000, only 350 had reported, with 12,000 mem-Ninety-two of these were junior societies,

with 2,265 members.

Five educational institutions—Cumberland University, Lincoln University, Missouri Valley College, Trinity University, and Waynesburg College-returned 1,040 literary students, 193 ministerial and 78 law students, and 113 students not classified, with funds: productive endowment, \$311,884; nonproductive endowment, \$123,000; and buildings and grounds, \$375,000

The Board of Missions returned the total amount received for its work as having been \$71,884, the largest sum ever reported in a single year. It had the care of 21 home-mission churches, while much activity was manifested in State organizations. The foreign work was carried on in Mexico, where a further development of the schools was advised, and in Japan. The sum of \$2,183 had been loaned in the Church Erection Department, in behalf of which increased interest appeared to be manifested in the churches.

The treasurer of the Woman's Board of Foreign Missions reported that the receipts for the year had been \$15,267, or including the balance

from the previous year, \$18.685.

The sixty-fifth General Assembly met in Meridian, Miss., May 16. The Rev. M. B. De Witt, D. D., of Missouri, was chosen moderator. An appeal was presented from Nolin Presbytery, asking for a reopening of the case of Mrs. Woos lev. which arose in the General Assembly of 1893, and for a deliverance as to her rights as an ordained preacher. Two reports were presented. The majority report denied the validity of the

action of the Kentucky Synod declaring Mrs. Woosley's ordination invalid and also of the action of the General Assembly, and advised that case be not reopened. The minority report seld that the General Assembly at Eugene, Orerho agitated the question, take jurisdiction of subject, that it confirmed the action of the entucky Synod and declared the ordination of Irs. Woosley invalid, and that its decision was The conclusion was reached that Nolin ytery had not regarded the authority of higher courts, and hence the appeal should dismissed. The minority report was adopted. a minute was adopted referring to the theocies faculty a proposition contemplating the pirit, and declaring that the nomination of fessors by the General Assembly would not in keeping with the original agreement conming the selection of professors; also expresspleasure at efforts that were being made by Synod of Illinois to found a divinity school ne connection with Chicago University for the proper training of Cumberland Presbyterian roung men. A declaration was made in favor systematic and proportionate giving in the proportion of at least one tenth of the giver's accome for the support of Christian work, and sures were advised for encouraging the genal adoption of the plan. The report on temance declared it to be the duty of Christian itizens to vote and labor for the suppression of the liquor traffic. The Assembly advised that a hristian Endeavor union be formed in every cobytery, disapproved of Union Christian Envor societies, and suggested that a series of oks or tracts for the young people be prepared the subjects of the history of the Cumber-Presbyterian Church, a statement of Chrisa doctrine and the doctrine of the Cumber-Presbyterian Church, systematic giving. history and claims of the Church enterprises, lay schools and Sunday-school work, the story of Cumberland Presbyterian Endeavor sk, and brief biographies of the men and men of the Church. The report on Sabbath evance recommended that ministers, church cers, and members pledge themselves to be re careful in keeping the Sabbath day holy; lared pastors and elders to be largely responble for the growing neglect of the Sabbath; id condemned Sunday railroad trains, Sunday papers, and Sunday visiting. On the sub-t of Presbyterian federation the Assembly plared that no gain would come to the Church entering the proposed federation, while it ald involve additional and needless machinery expense, and therefore declined to approve plan. Presbyteries were instructed, under nalty of censure, and if necessary of dissolun, to demand that all candidates for ordina-The General Assembly of the Cumberland

The General Assembly of the Cumberland Presbyterian Church, Colored, met in Nashville, funn., May 6. The Rev. Pinkney Price, of Topeka, Kan., was elected moderator. About 25 commissioners were in attendance, 19 of whom were ministers. Twelve presbyteries, in the States of Tennessee, Kentneky, Alabama, Kancaa, Missouri, and Illinois, were represented. A

committee was appointed to select a parties of a denominational school and put the school potential.

VI. Presbyterian Church in Canada. The following is a summary of the statistical reports of this Church presented to the General As sembly in June; Number of churches and stations, 2,339; of sittings, 517.517; of families, 93,635; of communicants, 179,579; of persons engaged in Sabbath-school work, 17,443, of members of Sabbath school and Bible classes, 154, 639; of haptisms during the year, 1,369 of while and 11,029 of infants; of additions on profession, 12,922. Amount of contributions To the Home Mission fund, \$63,703; to the Augmentation fund, \$31,407; to French evangelization, \$24. 239; to the Foreign Mission fund, by roughgations, \$59,688; through the Woman's Ferriga Missionary societies, \$58,770; to the Aged and Infirm Ministers' fund, \$9,007; to the Endowment fund, \$6,005; to the Wislows' and Or-phans' fund, \$5,654; to the Assembly Expense fund, \$3,906. Stiperide received from all sources, \$898,248, of which \$828,785 were paid by congregations alone. The total payments for congregational objects were \$1,719,588, payments to the college funds, ordinary, were \$24, 242; and to the special fund. \$17.68%

Sixteen presbyteries reported 1,898 Sabbath schools, with 17,527 officers and teachers and 153,013 pupils; while the contributions of the

schools were returned at \$22,000.

The total receipts for French evangelization were \$34,115. Twenty-five pastors, ordained missionaries, and licentiates, 10 student missionaries, 7 colporteurs, and 22 teachers were employed in the work, in 36 mission fields, with 93 preaching stations. Two hundred and three members, 50 of whom were English, had been added during the year; and the whole number of members was 1,105. The Sabbiath achosels had been attended by 918 pupils. The 20 mission day schools returned 600 enrolled pupils.

The total receipts for home missions, including what had been expended by the preshyteries for the work, had been \$115.714. The receipts of the Eastern section—\$12.290—showed a threefold increase in ten years. This section returned 255 laborers at work. The board of the Western section had 344 mission fields, with \$25 missionaries, 14,500 communicants, and \$8,000 persons, representing nearly 12,600 families, attending the weekly services. The sum of \$69,000 had been contributed for the respect of the "ordinances."

The foreign missions included those to the New Hebrides and Trinidad, for which \$27,485 had been received; those in Formona, where were 4 ordained missionaries, 60 native amordained preachers, and 1,728 communicants; Honan, China, and India; those to the Indians, on 21 reserves in Manitoba and the Northwest Territories, with the Alberni mission as a special work; the Chinese mission in British Columbia; and the Jewish mission in Palestine.

The General Assembly met in London, Ontario, June 13. The Rev. James Robertson was chosen moderator. On the subject of Church union the Assembly reaffirmed its earnest desire to presente, on a scriptural basis, the cases of churches which "hold the Head" and are

rendering faithful service to him; expressed its reachness to co-operate with all evangelical churches " in advancing all those holy and beneficent ends for which the Church of Christ has been instituted"; and reappointed its Committee on Union, as in past years, giving it power to confer with any similar bodies representing other churches, regarding matters relating to unions or corporations, as opportunity might offer. The report on Sabbath observance represented that the subject was pressing upon pubhe attention with increasing intensity as vitally identified with the welfare of society and the progress of religion. The Assembly recommended that general conferences be held upon it in every presbytery, and urged the importance of influencing legislators, through deputations or otherwise, to "right views of the Sabbath in relation to national welfare." reference to the difficulties in the province of Manitoba in connection with the matter of pubhe education, the Assembly resolved:

1. That it belongs to the state to see that the people receive such a measure of education as shall quality them for the ordinary duties of citizenship. 2. While the duty of giving definite and detailed religious teaching must rest, above all, on the parent and the Church, yet the system of public instruction should be based upon and pervaded by the principles of Christianity, and should give distinct place to the reading of the Scriptures and prayer. 3. The General Assembly does not regard the system of separate schools with favor, and is strongly opposed to this system in Canada. The Assembly would therefore deplore any attempt to interfere with the freedom of Manitoba in determining and regulating its own educational affairs. Such a course in the judgment of the Assembly could result only in evil, and is not, we believe, demanded by any supposed compact between the province and the Dominion, or between different classes of people in the province itself. 4. The General Assembly hopes that this view will prevail with the authorities of the Dominion, and would rejoice should conference between the province and the Dominion lead to a proper and harmonious adjustment in accordance with the view above expressed.

The report on temperance, reiterated the expression of previous Assemblies that "so far as legislation is concerned, nothing short of prohibition, rigidly enforced by the proper authorities, should ever be accepted as final and satisfactory."

VII. Free Church of Scotland .- The General Assembly of the Free Church of Scotland met in Elimburgh May 28. The Rev. Dr. J. Hast Wilson was chosen moderator. With refcome to union with the United Presbyterian Care by the Assembly declared that it recognized the aroun could not be wisely taken until an experience of it pervaded both to a far ind directed the appointment of a comthe subject, and to embrace and the United Presbyterian Church. Of the control of the stablishment maintained that a send owner and a sendowment were acts of the the stab-que's a seried the clum upon the Government ' : we way and final settlement of it.

In a sever to an everture asking the Assembly to inquire out the views of Prof. Drummond as

expressed in his book "The Ascent of Man," the Assembly declared that it could not find grounds for action. It was observed by Principal Rainy, in the discussion on this subject, that ministers and elders were scarcely equipped for dealing with the scientific questions raised, and must allow some liberty of action to a man whom they had placed in a chair the work of which had to run on scientific lines. The Church should not at this time be compelled to formulate its position toward modern scientific theories.

VIII. Church of Scotland.—The summary of the income of the schemes and funds of the Church of Scotland for 1894 shows that the total income was £167,641, as against £62,896 in 1893.

The General Assembly met in Edinburgh May 28. The Rev. Dr. Donald MacLeod was chosen moderator. The report of the Colonial Committee called attention to the great good that might be done in South Africa if an attempt was made to meet the spiritual needs of Scotchmen who were there seeking fortune and adventure. expenditure for home missions had been £65,-000. A larger number of agents had been employed. The Committee on Foreign Missions represented that a reduction of expenditure of £2,344 would be required to avoid debt. The report on Church interests declared that as a principle of united action religious equality did not at present exist. The men who had participated in a voluntary conference of members of the 3 largest Presbyterian churches of Scotland (see below) could be honored for the part they had taken, but they should remember that they were not messengers from the Church, and that they were bound to abide by the declarations of the Assembly. The negotiations, whatever might be their result, must not be allowed to affect the policy of the committee.

IX. United Presbyterian Church of Scot-

land,-The Synod of the United Presbyterian Church in Scotland met in Edinburgh May 7. The Rev. David Kinnear was chosen moderator. An occasion having been afforded by the presentation of a protest against the act of a min-ister who had admitted the Rev. David Macrae, of Dundee, excluded, to his pulpit, the Synod, waiving the consideration of personality, ex-pressed disapproval of any minister of the Church allowing any one who had been declared no longer a minister of the Church to occupy his pulpit. A resolution was passed expressing regret that the Government had not been able to introduce its bill for disestablishment and disendowment; regarding as a sign of progress the second reading of the Government's disestablishment bill for Wales; avowing the determination to maintain and advance the voluntary principles of the Church; and pressing on the Executive Committee to do all in its power to hasten the legislative triumph of religious equality.

Conference of Scotch Presbyterian Churches.—A number of representative men of the 3 Presbyterian Churches of Scotland held several conferences during the year relating to the question of union, the aim of which was to draw out and present in a distinct form the extent of agreement existing even on questions coming within the region of controversy. The various findings are given in the published re-

port of the results, under three headings, the first of which relates to reformation and revolutionary statutes. While approving of these statutes in so far as they contain a rejection by the state of the usurped claims of the papal Church, the conferences disapproved of them as embedying persecuting principles. It was found that in holding that the civil courts are not entitled by the word of God to interfere in the spiritual ts of the Church, and that the rights of the Church in matters spiritual are based not on civil statutes, but on the foundation laid by Christ. "Christ," the finding says, "has conferred on the people individually a spiritual freedom which neither civil nor ecclesiastical authorities are entitled to violate and abridge." The third heading relates to national religion, and here the articles of agreement of the Free and United Presbyterian Churches formulated in 1869 are adopted as a reasonable basis from which to start negotiations for union. An additional statement to these articles contains the assertion: "In order that religion may have national recognition and that a nation may give expression to the homage which it owes to God and to his laws, religion ought to be acknowledged by the state in its Constitution, legislation, and conduct."

X. Presbyterian Church in Ireland.— The statistical returns of the Presbyterian Church in Ireland for 1894 give the number of ministers as 652, with 56 retired ministers; of congregations as 559, with 104,578 members, representing 82,662 families; and of Sabbath schools as 1,092, with 115,202 members, including those in Bible classes. The whole amount

of contributions in 1894 was £193,507.

The General Assembly met in Dublin, June 3.
The Rev. G. Buick, LL. D., of Cullybackey, was chosen moderator. The principal topic of discussion concerned the use of hymns in worship. The policy of the Church since its organization by the Union of Synods in 1841 had been to give its sanction of authorization only to the Paalms of David, but to permit congregations to use, on their own responsibility, paraphrases and hymns. A motion was made to withdraw this permission, but was defeated by a large majority, and the Assembly decided that uninspired hymns might be used.

XI. Presbyterian Church in England .-The Synod of the Presbyterian Church in England met at Newcastle-on-Tyne April 29. Rev. Richard Leith was chosen moderator. The predominant subject of interest at the meeting was a proposition to remove the college from London to Cambridge, which was carried. A site, together with the sum of £50,000, had been offered the institution at Cambridge. Five ministers were authorized to be set apart for evangel-istic work during the year. The appointment was anthorized of an agent who should devote his whole energy to the organization of a church building fund, for which £50,000 were desired, Expressions of regret, to be embodied in a pastoral address, were made at the lack of spiritual vigor and aggressiveness in some parts of the Church indicated in the returns, and at the spirit of indifference manifested outside. The temperance society connected with the Church

was represented as making rat 1 1 tures instruction of youth by little teas a factor lies was commended. The income for the page missions had been £23,164 showing a def of £3,000. The work of the mission a retting had not suffered by the war it and led In preaching stations in Amos hwater Piers on and Singapore, with 56 European agents 117 as tive evalgelists, 13 native pastors appared to their congregations, 10 heaptials and 4 464 com-The native Christians were seeding municanta. missionaries to their countrymen The Weero's Missionary Association had 23 missionaries uncluded in the previous enumeration in China. The society has also small more no in India and to the Jews in Lotedon and in Street amount raised in the Church from all sources during the year was £734,343 Foor handred and fifty Sunday schools returned 7,532 teachers and 82,596 pupils. An increase of 1 412 was reported in the number of communicante

XII. Welsh Calvinistic Methodist Church,

The following is a summary of the statistics of
this body which were presented to the Assembly
in June: Number of churches, 1200 of chapels
and preaching stations, 1,486; of ministers, 120,
of communicants, 145,694; of children in the
churches, 66,431; of probationers, 2,931 total
in the churches, 214,456; of Sandar te backs, 1,662,
with 195,354 pupils and teachers of a hereusic
including communicants, 20,6,693, total amount
of collections, £230,101. The year's increase in

church membership was 37 674.

The General Assembly met in Leedon June 10. The Rev. Griffith Ellis was chosen or story ator. The parliamentary committee presented a report embalying a plea for described extract, which was adopted. The report is all set a statement of the comparative strength of the 4 person cipal nonconformut denominations in the prescipality and of the Established Church in the 4 Welsh dioceses, from which it appeared that among less than 2,000,000 of people the 4 decominations have 381,795 common scants and see,332 adherents; and the Fatablished thereb has 114. 756 communicants and 258,369 adversors majority in favor of the received en etc 263,6139 communicante and 622 the alberrale Postburg that the nonconferente pers de alt ogs for more than 1,100,000 people, and the Fatable best & red for 450,000; that since 1816 ment of east chap-els have increased from 293 to 4,752 or 628 per cent, in less than eights sears, that between INTE and INVE there was an increase of more than 100,000 toron of residences a marche, and that letween 1970 as 1 1990 the matthedaces of the talainist there homerened in per cent. A report on the We an abreme at weed that he tween limited and tolled Welsh speaking perple were residing in England and that 28,000 people will spake Weish Bred in Lendon, of Whiten with attended Walsh cheryben while H was believed that about 4000 attended English churches bearing 16 (ta) speaking Webb who neglect the means of grace. The financial to just about that the liabilities of the reconstitue were cleared off every are vegen while by one timed church extension of its debes were bere in the neighborhood of Cam (to), and this feat ure was regarded as a mark of progress and contespense. The "Forward Evangeless Mice

ment," a new scheme of preaching to the masses of people outside the churches is called, now three years old, had 17 evangelists at work, and congregations numbering in the aggregate 6,000 people, with an annual income of £2,000. Eighteen centers of operations had been instituted in the most populous districts of South Wales, and 1 in London, and 2 new ones were to be opened.

XIII. Presbyterian Union in Australia.—A scheme for the Federal Union of the Presbyterian Union of the Presbyterian Union of the Presbyterian churches of Australia and Tasmania was agreed upon at a Federal General Assembly held in Sydney in 1895. The acceptance was advised as a basis of union of the Holy Scriptures as the supreme standard and the Confession of Faith as a subordinate standard, with a declaratory statement.

PRINCE EDWARD ISLAND, an eastern province of the Dominion of Canada; popula-

tion, about 110,000.

Government.—The Executive Council in 1894-95 was as follows: Premier and Attorney-General, Hon. F. Peters; Treasurer and Commissioner of Public Lands, Hon. A Maemillan; Commissioner of Public Works, Hon. J. R. Mellean; members of Council without portfolio, Hon. D. Farquharson, Hon. A. Laird, Hon. P. Sinclair, Hon. J. W. Richards, Hon. G. Forbes, Hon. A. McLaughlin.

Finances.—The receipts for the year ending Dec. 31, 1894, were as follows: Dominion subsidy, \$183,029.37; public lands, \$36,250.08; provincial land tax, \$30,499.38; income tax, \$6,221.53; commercial traveler's license, \$3,825; incorporated companies, \$3,900; ferries, \$5,154.05; prothonotary offices, \$2,386.83; registry offices, \$5,281.99; county courts, \$1,387.88; miscellaneous, \$4,531.87; total, \$282,467.98.

The ordinary expenditure for the year was \$280,595,90, and the special expenditure, mainly for bridges, was \$22,036,29, leaving a deficit of \$20,000. The imposition of new taxes, in 1893, on certain classes of traders, on incomes, on certain incorporated companies, and on successions, did not make ends meet, as was hoped.

Legislation.—The second session of the thirty-second Assembly was opened at Charlottetown by Lieut.-Gov. Howlan, March 21, 1895. J. H. Commiskey was re-elected Speaker. The following acts, among others, were passed:

To provide for the incorporation of cheese and butter manufacturing associations.

Respecting seduction.

Townspower the Government of this province to

hard to Legation of marsh lands.

I proved the spread of black knot on plum and

Education.—The educational affairs of the strong at under the control of a Board of blood and appropriate the Government, and a superintendent. The Government extentions in 1894 was \$122,077, and that of the districts under school-heard assessments was \$17,854. It was obtunated that there were 24,000 chairs of schools given part of the year. The figure chast 401 schools, compared with \$87 in 1892 and 50 in 1893; 401 teachers, 16,036 pupils, and an average attendance of 8,709.

Fisheries.—The province had 151 fishermen in vessels and 3,178 in boats during 1894. Its vessels, boats, wharves, nets, and general fishing appliances were valued at \$468,736, an increase of \$342,000 in eleven years. The value of the yield was \$1,119,738, and the exports of the province \$447,813.

The distribution and value of the eatch in 1894 were as follow: Salmon, \$2,025; herring, \$203,909; haddock, \$6,002; hake, \$28,899; halbut, \$820; oysters, \$96,220; mackerel, \$145,625; cod, \$107,892; lobsters, \$380,770; pollock, \$28,899; smelts, \$36,683; others, \$113,893.

The registered seagoing tonnage carrying cargo into and out of the province was 104,710 tons during 1894. The imports of dutiable goods in 1894 were valued at \$354,153, with a duty of \$161.836: free goods at \$196.839.

duty of \$161,836; free goods at \$196,839.

PROTESTANT EPISCOPAL CHURCH
IN THE UNITED STATES. Comparison of
the diocesan statistics for 1894 and 1895 shows
a gain during the year in every particular, except that the number of deacons ordained was
28 fewer than last year. The general summary
is as follows: Number of dioceses, 58; missionary districts in the United States, 19; missionary jurisdictions in foreign lands, 7; clergy
(bishops, 79; priests and deacons, 4,603), 4,682;
parishes and missions, 6,118; candidates for
holy orders, 558; ordinations, deacons, 193; ordinations, priests, 181; baptisms, 64,752; confirmations, 45,796; communicants, 622,194; marriages, 17,257; burials, 32,677; Sunday-school
teachers, 45,635; Sunday-school pupils, 422,984;
total of contributions, \$13,507,429,70.

The General Convention met in Minneapolis, Minn., Oct. 2. Little of note in the way of direct legislation was accomplished. Five new dioceses were formed by the division of the sees of Maryland, California, and Kentucky, and by the erection of the missionary jurisdictions of Northern Texas and Northern Michigan into dioceses. Two new missionary jurisdictions were formed by setting off portions of the dioceses of Minnesota and North Carolina as missionary jurisdictions of Duluth and Asheville, respectively. Wyoming and Idaho were made independent missionary districts, with the present bishop in charge of both. Western Colorado was put under the charge of the Bishop of Nevada and Utah, whose title becomes Bishop of Nevada, Utah, and Western Colorado, Part of the territory under the Bishop of Western Texas was added to Northern Texas, and part to New Mexico. The title of the Missionary Bishop of Oklahoma was changed to Missionary Bishop of Oklahoma and the Indian Territory. The Rev. Peter Trimble Rowe was elected Missionary The Rev. Bishop of Alaska. The revision of the constitution and canons was referred back to the Constitutional Commission, to report again to the General Convention of 1898, which was appointed to meet in Washington the first Wednesday in October, 1898. The pastoral letter issued on Oct. 18, 1894, which solemnly affirmed the virgin birth of our Lord and the inspiration of the Holy Scriptures as matters of faith which no Christian man could question, was reaffirmed by the pastoral issued from Minneapolis.

Missions.—The Board of Missions, consisting of the 2 houses of the General Convention and

the Board of Managers, convened, Oct. 4, in peapolis, Minn., for the triennial meeting, adjourned on Oct. 18. Resolutions of symathy with the Armenian Christians, with the Church of England whose workers suffered the recent massacre at Kucheng, and with Bannock Indians as innocent victims of agmembers constituting the Commission for fork among the Colored People was reduced om 21 to 15, and it was resolved: "That it be monmended to the Board of Managers to con-For the feasibility of appointing at least 1 colman, a communicant of the Church, on the emission." The following resolutions also re adopted :

That all women hereafter receiving appointment der the Board of Missions shall be required to have least six months' training in one of our Church haling schools or some kindred institution, unless a Board of Managers or the bishop to whose juris-letion she is to be sent has personal knowledge of

at every parish and mission of this Church is

That every parish and mission of this Church is peeted to contribute to the treasury of our Mission- Society annually for the next three years.

That every parish and mission which has contributed during the past year is expected to contribute maily during the next three years a sum at least so fourth larger than it gave last year.

That the Board of Missions requests the House of those to commit to a special committee of its own

shops to commit to a special committee of its own more, to report to the next General Convention, a question of redistricting the whole of our domesquestion or reusers.

The last resolution was the result of an exorts of the Boards of Managers.

From the report of the Board of Managers to following is taken:

With regard to educational subsidies, the board s within the past year adopted the following

That in the judgment of this board it is inconsista with the position taken by the Board of Missions 1892 in regard to Government appropriations, for my school occupying a building or buildings owned the Church to receive grants of money from the falted States.

The gross receipts of the society for the fiscal car, including those for specials and for misneous purposes, amounted to \$727,284.09. contributions for the work of the society re \$443,818.23. Compared with the previous there was an increase of offerings for genral missions of \$65,486.56, an increase of offerfor foreign missions of \$9,311.55, and a deo for domestic missions of \$1,158.93. The mount received from legacies, exclusive of s for investment, was \$59,262.39. The total mount at the discretion of the board toward secting its appropriations was \$503,075.62. In addition to this legacies amounting to \$11,000 received for investment. The amount reved for specials (which do not help the beard meeting its appropriations) was \$44,413.45.

The number of parishes and missions on the pard's books is 5,484; and of these, 3,506 (432) than in any previous year) contributed to be work of the society during the fiscal year. The Lenten offering from Sunday schools,

amounting to \$67,47191, was made to 2,500 schools, or 336 more than last year, the indeans in offerings being \$9,363.

On account of domestic missions the society paid out during the fiscal year \$130 [v] 17 Indian missions, \$48,235.02; colored missions, \$57,514.46; total, \$244,546.65. For foreign missions \$173,181.94 were paid out. The cost of administration and collection was \$26,158.62; of printing, \$14,374.13. The cash on hand nept. 1, 1895, was \$69,551.16.

The trust funds of the seriety amount to \$906,550.55 at par value, or \$910,226.55 at market value. The income collected from these was \$39,901.44. The Missionary Enrollment fund amounts to \$167,566.03.

The Convention, in 1886, adopted this resolution .

That the Board of Managers is hereby directed to use so much of the Enrollment fund so it may down necessary, and to employ such agency as it may think best for the establishment as spendily as may be, at such place as it may select, of a network for the education and evangelization of the reduced pumpin.

For domestic missions the receipts were as follow: Balance in treasury Sept. 1, 1894, \$27, 504.96; cash received during year (including \$22,620,16 for Indian missions and \$15,782.64 for colored missions), \$151,042.69; half of the general offerings to the society, \$52,143.44; legacies to domestic missions, \$34,345.17; legacies for investment, \$5,500; specials, \$44,413.45; half of personal loan, \$32,500; total receipts, \$395, 349.71. Expenditures in 18 missionary jurisdin-tions and 37 diocesses (including \$48.255.62 for Indian missions and \$57.514.46 for colored mis-sions) were \$244.546.65; specials, \$42.957.62; in-terest (half), \$421.15; half cost of administration and collection, \$13,079.21; half exet of printing "Spirit of Missions," reports, etc., \$5,182-15; legacies deposited for investment, etc., \$5,-650; returned to Trust fund, \$19,000; return of personal loan (half), \$32,500; balance Nept. 1, 1895, for domestic missions and specials, \$32,-008.12; total, \$397,349.71.

The whole number of missionaries, cherical and lay, receiving salaries or stiprends during the year was 837 to decrease sence last year of 9), and the amount appropriated for this whole work was \$269,635.

The Commission on Work among the Colored People reports the number of colored charge as 75, an increase of 7 since last year. Of there, 44 are in priests' orders, and 13 are employed in Northern cities. The communion has confined its grants to the 16 Southern or old share States -now divided into 23 discress and missionary jurisdictions-containing a population of more than 7,000,000 of persons of African descent. Last year the amount received in all was \$500. 158.05, and the expenditure \$33,001.06. returns, as far as they can be obtained, show that there are at least 130 chapels and mission stations, with 6,710 communicants, in charge of about 131 clergy, of whom more than 60 are white.

Of the 5,484 parishes and missions of the Church, 3,230 contributed to foreign missions. 6215 more than last year, the amount given being by far the largest in any year. The financial condition for 1894-95 is reported as follows: Balance Sept. 1, 1894, \$28,290.60; eash received during the year, \$108,483.66; half the general offering to the society, \$92,143.44; legacies, \$13,485.45; undesignated legacies applied to foreign missions, \$10,893.72; specials for Africa, China, Japan, etc., \$38,985.18; legacies for investment, \$5,500; withdrawn for time being from trust funds, \$21,189.48; half personal loan, \$32,500; total, \$351,471.53. Expenditures on account of missions, \$173,181.94; specials for Africa, China, Japan, etc., \$34,167.91; interest (one half), \$421.14; half cost of administration and collection, \$13,079.21; half cost of printing "Spirit of Missions," reports, etc., \$7,187.15; legacies for investment, \$5,650; return to trust funds, \$32,189.48; half personal loan, \$32,500; balance Sept. 1, 1895, for foreign missions and specials, \$53,094.69; total, \$351,471.53.

The Missionary Bishop of Cape Palmas reports that because of territory having been ceded to the French, as was mentioned last year, 35 of the principal stations and preaching places of the mission have been lost, leaving 63 stations and substations under the care of the 16 clergy connected with the Western Africa Mission, the number of communicants being 1,241, and of

Sunday-school pupils 1,450.

In Japan the repairs to buildings damaged by the earthquake last year have been finished, and the construction of the Tokio hospital, St. Paul's College, and other institutions is progressing. In his report the bishop says:

One result of the war between Japan and China has been a kindlier feeling toward Christianity, a lessening of the suspicion that a Japanese can not be at the same time a good Christian and loyal to his Emperor. A way has been opened which gives us new opportunities for knowing and influencing the Japanese soldiery. The ministers of war have given every encouragement and assistance to missionaries and other Christian workers to preach and distribute Bibles and tracts to the garrisons throughout the empire. Six native Christians received official permission to go with the army as chaplains and "comforters." This permission was sought by and refused to Japanese Shinto priests.

The principal events of the year in China are the printing of a Chinese Church hymnal, the conclusion of the first portion of the revision of the Prayer Book, and the opening of the new

builling of St. John's College.

The work of the Church in Hayti was commended by the President of the republic in his last a much message. The formal opening of the Church of the Holy Trinity at Port au Prince of the

sionary fields."

A summary of the work accomplished by the Auxiliary and its junior department in 52 dioceses and 13 missionary jurisdictions Sept. 1, 1894, to Sept. 1, 1895, shows contributions: Under appropriations for domestic missions, \$22, 878.83; for foreign missions, \$23,169.67; specials for domestic missions, \$39,443.22; for foreign missions, \$51,390.30; boxes, 8,312, valued at \$181,571.91; total value of contributions, \$349,-215.26, of which amount the junior department contributed \$36,427.23. Within the past three years 7 woman workers have been sent into the mission field by the Woman's Auxiliary as reg-ular missionaries of the board—2 to Africa, 3 to China, and 2 to Alaska. The first Church hospital in the Indian Territory, the first Church hospital in Arizona (for the benefit of the Navajo Indians), and lace schools among the Chippewa Indians of Minnesota have been established.

The American Church Missionary Society, as the foreign field under its charge, has the island of Cuba and the southern division of Brazil. In Cuba the work has been suspended by the civil war. In Brazil there were 62 baptisms during the year and nearly 200 communicants, and the churches in Brazil contributed \$3,281.52, more than one third of the whole amount contributed to the support of missions through the society. The total receipts of the society were \$33,830.48, and the balance Sept. 1, 1895. was \$4,708.73. Its securities amount to \$117,293.05.

The Society for promoting Christianity among the Jews reports an increase of toleration toward its missionaries, but states that Jewish converts are expelled from their homes, deprived of a means of livelihood, and subjected to all manner of personal indignities. Its cash receipts during the year amounted to \$9.744.17; balance from old account, \$1,763.15; total. \$11,507.32. The disbursements were \$10,902.63;

507.32. The disbursements were \$10,902.63; balance on hand Sept. 1, 1895. \$604.69.

Building Fund Commission.—On Sept. 1 this fund amounted to \$275,077.70, an increase during the year of \$14,022.82. Gifts, 19 in number, amounting to \$2,500. were made, and 13 other gifts, amounting to \$1,650, were voted. The total amount of gifts paid to September, 1895, is \$7,403.50. Since the last report 15 loans have been paid off and 35 new loans made. The amount that has been once loaned and returned to the fund by 105 churches is \$152,000. The total amount now outstanding on loan is \$175.247.67.

Prayer-book Distribution.—The Prayer-book Distribution Society, whose object is to promote the distribution of the Book of Common Prayer among the people throughout the United States, this year made its first triennial report, from which it appears that since the adoption in 1892 of the revised Prayer Book about 1,000,000 copies of that book have been published and report has been made of the grant of 195,800 copies of the prayer book and 94,488 copies of the hymnal.

Religious Orders.—To the religious orders for men heretofore enumerated has been added the Brotherhood of the Good Shepherd, founded in 1895, whose objects are the same as those of

the Brothers of the Church, and the Community of St. Benedict, founded in New York in 1894 and reorganized in 1895 under the rule of St. Benedict. This community is dependent for support upon voluntary contributions. Its objects are thus set forth :

To aid in revival of three of the special characteristies of the Holy Catholic and Apostolic Church in all

es and lands;

1. Honor and devotion to our blessed Lord in the blessed sacrament of his holy body and blood.

2. Honor and invocation of the holy mother of God

and all saints.

1. Continuous worship of God and intercession for the peace and salvation of souls in ways only possi-ble within the cloister.

The only requirement for admission for priest or

layman is the vocation.

The Sisterhood of All Angels, Wilmington, Del., was founded during the year. In the list of disconal communities should be included the Diaconal Community of St. Martha, Louisville, Ky, organized in 1975 as a coler .. a -1 reorganized as a community of less were 1881, and the Disconsi Community of Mall arine of the diocese of theorgia, Marie the let ganized in 1991.

Miscellaneous, - Four bishops have died due ing the Church year There are William he White Howe, sixth Bishop of South Care a David Buel Knickertsacker, third Bishop of Indiana; Elisha Smith Thomas, second Bishop of Karisas; and Mark Anthony De Wolfe House first Bishop of Central Pennsylvania. The death of 79 clergymen to also reported. The depondent of 10 presbyters was found prevenary, and 2 were restored to the ministry. John Hamo White was consecrated History of Indiana and Frank Homebrook Millspaugh Bishop of Kannas An event of much importance was the compaction by the learned and venerable Rubop Schereschewier of his translation of the Scriptures into the Weali or literary language of China

QUEBEC, an eastern province of the Dominton of Canada.

Government.—The resignation of Hon. J. S. Hall, provincial Treasurer, on account of the loan of \$5,000,000 which had been placed in Paris during the summer, and, as he claimed, unnecessarily, was a blow to the ministry. The Premier, Hon. L. O. Taillon, assumed the treasuryship himself and appointed M. F. Hackett, of Stanstead, to be President of the Council and A. W. Morris, of Montreal, a member of the Executive without portfolio.

Finances.—The finances of Quebec are not casy to manage, and during the period of extravgance that lasted from 1886 to 1892 the net debt of the province increased from \$6,000,000 to \$15,000,000, and the gross debt from \$19,068,-023 to \$28,731,263. In 1894 this gross indebted-ness was \$30,215,272. In 1894-'95 the expenditure was \$4,195,727, and the receipts \$4,322,028.

On Nov. 26, 1895, Mr. Taillon delivered the annual budget speech. He stated that for the fiscal year ending June 30 \$187,314 had been obtained from judicial stamps instead of the \$175,000 estimated; the building fund yielded \$29,477 instead of \$10,000; the tax on commercial corporations \$160,756 or \$20,756 more than the estimate; and the tax on successions \$162.535 instead of \$40,000. Those taxes that fell short of the estimate included the Crown Lands Department, \$35,767; license law, \$35,996; manufacturing and trading licenses, \$128,067; transfers of real-estate tax, \$74,129. The expenditure on the public debt had been estimated by his predecessor at \$1,527,296; it was only \$1,486,660, the difference being due to the better credit of the province and consequent lower rates on its maturing loans.

Legislation.—The Legislature was opened at Quebec, Oct. 30, 1895, by Licut. Gov. Chaplean in a speech from the throne, of which the following passages are the most important:

My Government has endeavored as much as possible to direct dairy operations, and in order to pre-

vent overstocking of the cheese market has some all? favored butter-making, and avanted prime for evenes eries working in winter. The quantity of buster manufactured in winter has more than deplied day ing the three years that these prime have been granted. This question of equilibrium in production having been placed on a satisfactory basis, as a time. erminent has striven to restore the regulation of had ter from the province of Qualities in England a reputation which has greatly suffered from ed present made under unsuitable circumstances. The results hitherto obtained have been must estudiariser ter from the province is now a send in large and among the best products of a a lar easier of the whole world. The easiers of the errors which to off in 1894, have again incremed. The little greatur tion of our dairies of the persons of Quetue which dld not amount to \$3,000 ,000 is 1600, examples \$" 1000 000 in 1894.

While the progress which is he ag make at every branch of agriculture is attract by the acception of our sister provinces and of fier gas countries to our province, he w regions are being square to agreem tural settlement. The Legislature adjustmed Jan. 12, 1995. The important measures passed were these !

Respecting a lower prepared to agriculture.

Respecting railway submodure.
The amount the laws respecting public instruction and any last tune for the insure and the Queber Europe law.
The containing the Lamentaides National Park and the Trembling Messtain Park

TIT ATHERAL " the twelve children act."

To present believy and corruption on mema-rail and citie corporations.

To amend the law respecting the subdivision of collastral luta.

For the protection of forests against fire.

To amend the tariff of tells on timber and lumber making use of improvements on streams.

To amend the act respecting taxes on subsidies to

Concerning the cultivation of the sugar beet.

Agriculture.- The annual report of the Department of Agriculture shows that in 1893 141,251 pounds of butter, valued at \$31,537. were manufactured; in 1894, 255,868 pounds, valued at \$60,094; in 1895, 562,061 pounds, valued at \$118,013. It also shows that, while the manufacture of cheese in the province in 1890 was only 4.924,504 pounds, it had increased in 1894 to 31,554,746 pounds-a difference in value and revenue to the farmers of \$4,000,000, In 1891 there were 345,789 horses, 970,887 cattle, 722,025 sheep, and 348,397 swine in the province.

Education .- During the year ending June 30, 1894, the Roman Catholic population of the province maintained 4,727 schools, or one school for every 273 persons, and the Protestant population 955 schools, or one to every 206 persons.

There were also 9 schools of arts and manufactures and 6 of agriculture and dairy pursuits. The total number of pupils enrolled in the province was 284,047; the average attend-The Roman Catholic schools ance 214,960. were attended by 1,291 Protestant pupils, and the Protestant schools by 2,699 Roman Catholics.

The pupils of French origin learning English numbered 48,253, and those of English origin learning French were 18,542. Agriculture was studied in the public schools by 49,245 pupils. The male lay teachers numbered 395, of whom 284 were Catholics and 111 Protestants. female lay teachers numbered 5,353, of whom 4,224 were Catholies and 1,129 Protestants.

The total expenditure for education in the province was \$2.642.481.

Forests and Timber,-The forest and woodland area of Quebec is 116,521 square miles. The timber cut under license in 1893 was 428,- 598,000 feet of pine saw logs, 257,140,000 feet of (chiefly) spruce saw logs, 1,131,079 cubic feet of square white pine, and smaller quantities of red pine, boom timber, railway ties, etc. The receipts from timber dues was \$645,655, and the ground rents \$153,005.

Fisheries and Shipping.—In 1894 there were 409 men in vessels and 11,672 men in boats engaged in the fisheries of Quebec, Under an act passed by the Dominion Parliament in 1892 a bounty is paid for the encouragement of sea fishing and the building of fishing ves-It is paid on the basis of \$3 a ton to vessels, \$3 a man to boat fishermen, and \$1 a boat to the owners. The total value of the vessels, boats, nets, traps, smoke and fish houses, piers, and wharves, etc., used in these Quebec fisheries during the year was \$904,811, or an increase of nearly \$200,000 in ten years. The value of the yield was \$2,303,386. The distribution and value of the catch in 1894 was as follows: Salmon, \$165,303; herring, \$206,493; haddock, \$4,207; halibut, \$13,774; sardines, \$7,050; mackerel, \$125,762; cod, \$1,156,077; lobsters, \$163,734; smelts, \$10,108; miscellaneous, \$450,989. The tonnage of Quebec shipping during 1894—in and out—was 2,587,044. Of this, 2,029,777 tons was British, 126,292 Canadian, and 430,975 foreign. The tonnage of the coasting trade was 5,681,961, compared with 4,433,307 tons in 1893.

During 1894 the imports of Quebec were valued at \$34,175,559, paying a Dominion duty of \$7,723,380, and \$24,555,510 free of duty. It must be remembered that Quebec contains the principal port of entrance to Canada via the St. Lawrence and receives the bulk of British goods, just as Ontario does of American goods. According to the trade and navigation returns, 81,086 head of cattle were exported from Quebec in 1894, but 90 per cent. of these were actually from Ontario. On June 30, 1894, there were 3,024 miles of railway in Quebec, 6 lines centering in Quebec city and 7 in Montreal. The population of the province is 1,500,000, of whom

1,290,000 are Roman Catholies.

R

REFORMED CHURCHES. I. Reformed Church in America .- The Committee on the State of Religion reported to the General Synod statistics of this Church, of which the following a summary: Number of churches, 618; of mis sters, 652; of candidates, 9; of families, 55,-4.1 of communicants, 103,316; of baptized tomuta ants, 41,549; of catechumens, 37,-26 . of numbers received during the year on lefering 5 -25; of baptisms during the year, 2507 of a fants and 1,389 of adults; of Sunday with 116,389 enrolled members; a unit of a significations for denominational pur-\$102-20 for ther purposes, \$124,063. The number is constituted in 2,508 larger than in 1864, 2 to the amounts of contribution are less.

The Was fand was reported in a satisfactory condition. Americants had been paid dur-

ing the year \$5, 50,

The Committee on Publication reported that the board was free from liabilities, and that the receipts from 144 churches—all that had contributed—amounted to \$1,739. The churches were requested by the General Synod to contribute to the board.

A continued shrinkage in the balance of the

Disabled Ministers' fund was reported.

The treasurer of the Board of Home Missions reported to the General Synod that the whole amount of gifts, legacies, and interests was \$77,-The total of offerings from the living to the Missionary fund had been \$58,154. During the year 202 churches and 134 missionary pas-tors had been aided. These churches and missions included 8,309 families, 12,456 members, and 16,012 members of Sunday schools, and returned 1,212 members added during the year on confession. A mission among the North American Indians in the Indian Territory had been

andertaken by the Women's Executive Committee. The same committee had raised \$16,-106 for the purposes of home-mission work, and had helped build 4 churches, repair 6, build 9 arsonages, and had paid the salaries of 3 clastical missionaries in the West and of 10 students aring the summer months.

The year's receipts of the Woman's Board of Foreign Missions had been \$29,717, and for the wenty years of the board's existence \$286,210.

enty years of the board's existence \$286,210.
The General Synod met in its eighty-ninth mual session at Grand Rapids, Mich., June 5. be Rev. Peter Stryker, D. D., of New York, as chosen president. The report of the Comleven years since the General Synod had before at Grand Rapids there had been a ked advance in nearly every respect; it was trated by a gain of 98 churches, 103 mins, 10,536 families, 176 Sunday schools, 26,members of Sunday schools, and of \$94,374 contributions for religious and benevolent oses and \$90,176 in those for congregaand purposes. These gains were nearly equiv-ent to 19 per cent, in the number of churches ad of ministers, more than 26 per cent, in comnicants, and nearly 43 per cent, in benevolent tributions. The Committee on Overtures reried that of the proposed amendments to the satitution sent down to the classes, those reling to the election of professors and to the lling of extraordinary meetings of the Genal Synod had been approved, the latter unani-mily. These were declared adopted. The sposed amendments relating to the ecclesiasal standing of professors and the declarative d by the majority of the classes, and were fore defeated. Twenty-three classes had led in favor of the proposed plan of federation, 10 classes, comprising the Holland classes, t it. The plan was declared adopted. A estion had risen in the previous General Synod rning the use of a certain series of Sundaycol-lesson-helps, and the subject was referred special committee. Upon the report of this amittee the Synod recommended the use of "International Series of Sunday-school Less," and expressed its judgment that "no of lessons or lesson helps should be introor used in which it is not distinctly the according to the historic faith of the Red Church (Conf., Art. V) that the Scriptures wholly true and the veritable word of God. cope of the standing Committee on Sun-Schools was so enlarged as to give them ority to review from time to time such pubstions as may be designed for the use of Sunday schools with the intent of advising nst such as may seem dangerous in their ency. Sympathy was expressed with the of the Franco-American Committee of ngelization; it was recommended to the pport of the people; and the celebration of two hundred and tenth anniversary of the ocation of the edict of Names on the aday of October, 1895, was mentioned as afcation of the edict of Nantes on the third ding a suitable opportunity for an offering aid of the Huguenot churches. A number overtures having been received asking amendsiastical standing of the dogical 1s from the Lie Synod resolved to defer the whole cultiport wall the Church can be more in harmony at the the method of effecting such changes as are decreted. The objects and purposes of the Church Lie deavor League were commended to all the young people's societies of the Church, and grateful acknowledgment was made of the assistance rendered by the Christian Endeavor Societies in building 4 Christian Endeavor churches.

II. Reformed Church in the United States. The statistical returns of this Church for 1866 give it 953 ministers, 224,443 church members, 191,992 communicante, and 1,636 Nunday schools, with 172,209 pupils. The number of confirma-tions was 11,881, an increase of 502 from the previous year; amount of henerolest evetributions, \$205,234 (decrease, about \$50,000); amount contributed for congregational porposes, \$1,014,-983. The Board of Home Missions has enlarged its missions among the Hungarians in the United States, having brought 2 missionaries from Hungary and licensed a third. The teard was embarrassed by a debt of between \$5,000 and \$10, 000. The receipts of the Board of Foreign Missions were \$30,630. The mission at headal. in northern Japan, returned about 2,000 communicants. An effort was making to obtain \$25,000 for the erection of college buildings at Sendai.

III. Christian Reformed Church in America.—This Church is composed chiefly of recent immigrants from the Netherlands. cording to its yearbook for 1865, it numbers 122 congregations, with 16,037 members and 76 pastors. It has a theological seminary at Grand Rapids, Mich., in which preparatory and these logical instruction are given, and with which are connected 3 professors and 2 assistants, with 20 theological and 27 preparatory students. Several pastors were brought over from the Netherlands during the year. Negotiations with the United Presbyterian Church with a view to union have been carried to the extent that an agreement has been made to co-operate in the work of foreign missions. Difference in language is mentioned as presenting a sersious chstacle to complete organic union.

REORGANIZED CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS. forty-third annual conference of this sent pass "Annual Cycloperdia" for 1860, page 660, was held in Independence, Mo., April 6. Among those present were Joseph Smith, the prophet and leader of the sect, and Mrs. Catharine Salishury. sister of Joseph Smith, "the Nauron Bour Reports showed that the Church had purchased a geopel heat for service on the Paritic const and to bear missionaries to and from the Sandwick and Society Islands; that the Church had organized 31 new accretics, gained 4,015 members, and lost by death and expulsion \$22 during the prepriests, and teachers, besides many ordained ministers. President Smith decided a question that has been argued by the Church for several years, declaring that adulters is the only cause for divorce, and that hereafter all members of the Church must live up to this decision. After the conference, a number of the delegates, beaded by J. E. Julian, of San Prancasco, began

searching for a suitable location in Missouri for a colony of Mormons to be gathered in California, Arizona, and Utah. The promoters behive that the time prophesied for the gathering tegether of Zion has come, and they declare that the colony will in part carry out the plan outlined in the revelation of 1830 for the order of Enisch, and creek factories and shops for the employment of those among them who are me-

chanies

REUNION 0F CHRISTENDOM. Grindelwald Conference for the Promotion of the Reumon of Christendom opened for 1895 at Grindelwald, Switzerland, Sept. 1. The opening address of the president, Dr. H. S. Lunn, contained a retrospect of the work done and the results achieved by the 3 rennion conferences that had already been held. The general service of prayer for rennion held on Whitsunday in response to the appeals of the conference and the co-operation of many churches in it and movements for union among British and Australian Methodist Churches and among Scottish Presbyterian Churches were cited as evidences of progress. The principal discussions of the conference touched upon questions of union between Anglicans and nonconformists in England, the attitude of the Holy See toward reunion, and the possibility of an educational concordat (concerning religious instruction in state schools). An address was adopted in answer to the letter on reunion which the Pope had addressed to the English people. In this letter the Pope, after referring to the early history of the Church in England and the subsequent relations of that country to the Holy See, had remarked with gratification on the attention given there to social questions, in the shape of inovements for the benefit of the working classes, in behalf of religious instruction, temperance, social purity, the defense of religion against rationalism and materialism, various forms of charity, the strict public observance of Sunday, and the general spirit of respect to the Scriptures; recognized the influence of the British nation as a civilizing agency and champion of liberty; and emphasized the power of prayer as supplying the most direct and efficient means of leading to the unity desired. The address in reply of the conference avowed the persuasion that "our Lord Jesus Christ himself is the only possible center of Christian unity, and that the indwelling Spirit of the Father and of the Son in every Christian hear' not only constitutes a spiritual unity which man can neither create nor destroy, but furnishes the conditions of that manifested unity for which a roll will br I praved "; and the belief "that unit a dept be obtained not by the absorption of the it was to any one communion of the divided thanh, but by such a union as will ements of Christian truth and and her the providence of God the an elemenations have severally ct of the Lefended." The president of the commissioned to present this address it is the verted Rome, but was the Pipe expressed a willingness to feet the capacity, but not as the profile to the the project of the Church I have a controlled to the instance of the subject of reunion, the Patriareh and Holy Synod of Constantinople answered it in an address to the Eastern Churches. The address consists of 25 clauses, in which the position of the Eastern Orthodox Church with respect to the Pope and Church of Rome is set forth. Having shown the impossibility of accepting the Pope's invitation to reunion, the address proceeds:

And as regards the sacred object of reunion, the Eastern Orthodox and Catholic Church of Christ is ready, it perchance she have allowed anything to be perverted or lost, to accept everything which the Eastern and Western Churches held in common before the ninth century; and if the Western Church can prove from the teachings of the holy fathers or the divinely assembled councils, that the Roman Church, then orthodox in the West, ever before the ninth century read the Creed with the additional (filioque), or used unleavened bread, or that it accepted the teaching regarding purgatory, sprinkling instead of immersion, the immaculate conception of the Ever-Virgin, the temporal power, or the in-fallibility, or the absolute rule of the Bishop of Rome, we have nothing to say; but if, on the contrary, it be clearly shown, as even the lovers of truth among the Latins admit, that the Eastern Catholic and Orthodox Church of Christ holds the primitive traditionary doctrines then commonly acknowledged both in the East and the West, and that the Western Church corrupted them by various innovations, it is then evident to children that the more natural way toward reunion is the return of the Western Church to the primitive, dogmatic, and administrative condition seeing that the faith is in no way changed by time or circumstances, but remains always and everywhere the same, that there is "one body and one spirit, even as ye are called in one hope of your calling one Lord, one faith, one baptism, one God and Father of all, who is above all and through all and in you

RHODE ISLAND, a New England State, one of the original thirteen, ratified the Constitution May 29, 1790; area, 1,250 square miles. The population, according to each decennial census, was 68,825 in 1790; 69,122 in 1800; 76,931 in 1810; 83,015 in 1820; 97,199 in 1830; 108,830 in 1840; 147,545 in 1850; 174,620 in 1860; 217,353 in 1870; 276,531 in 1880; and 345,506 in 1890. By the State census of 1895 it was 384,758. Capitals, Newport and Providence.

Government.—The following were the State officers during the year: Governor, D. Russell Brown, succeeded in May by Charles W. Lippitt; Lieutenant Governor, Edwin R. Allen; Secretary of State, Charles P. Bennett; Attorney-General, Edward C. Dubois; General Treasurer, Samuel Clark: Adjutant General, Elisha Dyer, succeeded at his resignation, in February, by Frederick M. Sackett; Auditor, A. C. Landers; Superintendent of Education, T. B. Stockwell; Commissioner of Roads, Charles F. Chase; Shellfish Commissioners, J. M. Wright, Benj. Brown, J. C. Church, J. T. Northrup, E. F. Dyer; Railroad Commissioner, E. G. Freeman; Chief Justice of the Supreme Court, Charles Matteson; Associate Justices, John H. Stiness, Pardon E. Tillinghast, George A. Wilbur, Horatio Rogers, W. W. Douglas, all Republicans.

The State Census.—The population of Providence is 145.472; of Pawtucket, 32.577; of Newport, 21.537; of Warwick, 21.168; of Woonsocket, 24.468; of Central Falls, 15,828; of Johnston, 11,203; of Cranston, 10,575; of East Providence of Constant of

dence, 10,170.

The following table shows the distribution and increase of population according to the census of 1895:

													TOTAL POPULATION											
COUNTIES.											1885.	1895.												
Bristol																							11,840	12.124
Kent	0							۰						0					۰		۰		21,614	201,14543
Newport											, .							٠					24,240	BULLTE
Providence.					0									۰	۰				٠				230,64	296,776
Washington.		•					0								0	0		0		0	0		22,444	24,786
State	0				0	0		۰					٠									-	804,254	894,756

The number of male adults in the State is 112,800; of these the possible voters number 6,709; the qualified voters, 69,770; and those

that voted in April, 43,763.

The adoption of the Bourn amendment to the Constitution has caused a great increase in the number of naturalized voters. In 1885 there were 4,824; in 1889, 12,908; and in 1895, 24,-615. The number of aliens in 1895 was 22,304. The percentage of foreign male adults in 1885 was 3723 of the whole population; in 1890 it was 4002, and in 1895 it had increased to 4229.

State Institutions,-The statistics of the Workhouse and House of Correction for the year show that Jan. 1, 1896, there were present 200 men and 76 women; remaining Dec. 31, 1895, 204 men and 63 women. At the Asylum for the Insane the statistics were: Number of inmates Dec. 31, 1894, 310 males, 299 females; committed during the year, 108 males, 91 females; number remaining Dec. 31, 1895, 314 males, 314 females-628.

At the Almshouse Dec. 31, 1894, the number of inmates was 114 men, 126 women, 19 boys, 18 girls; admitted during the year, 142 men, 110 women, 20 boys, 13 girls; remaining Dec. 31, 1895, 137 men, 146 women, 28 boys, 18 girls-

The statistics of the State Prison for the year were: Number of men in prison Jan. 1, 1895, 134, women 1-135; committed during the year. 77 men, 1 woman-78; number of inmates Jan. 1, 1896, 153 men, 2 women.

At the Sockanosset School for Boys 196 boys were received and 173 discharged. 1895, there were 265 boys at the school.

The Oaklawn School for Girls reports 31 girls t the institution Jan. 1, 1895; admitted during the year, 16; number at the school Jan. 1, 1896,

The report of the Rhode Island Hospital for the year ending Sept, 30 shows that the number of patients admitted was 2,046-males, 1,279; females, 767. The number of patients in the hospital Sept. 30, 1894, was 129; Sept. 30, 1895, it was 143,

The total receipts were \$65,862.20 and the ex-

penditures \$69,493,43,

Some changes have been made in Providence in the manner of enforcement of the laws regulating commitments for insanity, which have materially reduced the number of commitments and have also caused controversy between judge and physicians. The law requires that two physicians. sicians shall certify to the insanity of the patient who shall be committed by the district judge It has been customary for the regular physician

of the family interested to certify there el w & such other physician as the famile was a but the court of the beath leaden to line and issued an order providing that al. must be signed by one of three espects a grant ed by the court, who must also segts the request for a private examination if each shown be be cemary. As a result, a stop has been just to the practice of committing person who while hasing mental peculiarities, could not be called to same. The result of the rule has been that where formerly 3 or 4 were committed every week, only 4 were committed in two months.

Education .- At the one handred and twenty. seventh commencement of Brown I aircreit, in June, about 65 students received the degree of Bachelor of Arts, of whom ? were women; 30 that of Bachelor of Philosophy, of whom 4 were women; and 4 received the degree of Caril Man

gineer.

The granite building known as College Haff at the Rhode Island College of Agency tore and Mechanic Arts, at Kingston, was descreyed by fire Jan. 27. The students resented about \$4 (110) worth of property belonging to the institution, many leaving their own belongings to burn while they saved those of the State. The Legislature appropriated \$35,000 to rebuild the dormitory.

Insurance. - No life insurance en passes are incorporated in Rhode Island There are 29 companies incorporated in other States design business there, and the 2-per-cent tax pand by them in 1894 for business done in 1893 was

\$47,991,75.

Industries.-The cotton-goods industry in the State was not in satisfactory condition at the end of the year. The causes are given as follows:

Raw cotton costs almost one third move than it did about a year ago, and there are to a so we solk one using new cetters to get at the an emercal not now prices. Wages are higher, ton and there is prosture ? no demand for greats. A year ago or never ever charge raw material and lower percent lakes per a lower a product to the mills at a low range of its es on produ

The advance in the latter has not and on the and he cover the greatly incremed and of presenting and an

fresh orders for product are ever ag in

There was a long-continued strice to selving the operatives of many mile at there it he ginning in April There were a so ofrebes al Central Falls, Burrillville, and Westers

The Board of Agraculture expensed \$73,000 during the year in the proseculum of its walan important part of which is the detection and destruction of tulerro on an emale; of these, \$77 were killed, of which led were cowe and 30 hoger pent mortem examinate on all well that only 12 of these were not infected

Central Falls. This village in the town of Lincoln has been incorporated as a cute, and the municipal government was inaugurated March 14 It is the Efth core in the State, and is acre small terratorialle and sers enempiors, lying less than a square mile in extent with penels 16.000 inhabitante. Its total valuation is Denrie \$7 (88) (88)

Pantucket .- The citizens of Attlebuen Mass. menting in its catterns southwestern corner have desired to be annexed to Pastucket for none time, and this year prepared a petition to the General Court of Massachusetts, asking that the boundary line between the two States be so deflected as to make it pass along the northeastern line of their settlement. A similar petition was prepared to be sent to the Rhode Island Legisature after the first should have been acted upon.

Block Island.—The great Salt pond, Block Island, was formally opened Sept. 21 as a harbor of refuge. The State appropriated \$60,000 for work on the harbor, and the town \$45,000, of which \$70,000 has been expended. The harbor is a natural formation of extensive proportions. and from 25 to 35 feet at low water. A low stretch of sand separates it from the ocean.

New Statehouse.-Ground was broken Sept. 16 for a new Statehouse on Smith's Hill in Providence. The commission to do the work was appointed at the January session of 1893. The city appropriated \$200,000 for a site, provided one were selected within certain limits. The design was made by New York architects, and calls for marble as the material. The contract price for construction is \$1,576,000.

Legislative Session.—The January session began Jan. 29 and ended May 25. Among the more important bills was one called the "Strike act," amending and adding to the chapter "Of Offenses against Private Property," providing fines and imprisonment for willfully obstructing a street railway company in the use of its tracks or willfully and maliciously delaying or obstructing the passing of its cars or carriages thereon, and for willfully and maliciously cutting, destroving, or injuring any machine, appliance, or apparatus used for generating electric currents, or any electric wire or other appliance or apparatus used for the purpose of conducting or transmitting electric currents for using and furnishing power, motive power, light, heat, or used for the purpose of transmitting intelligence, etc.

It was prohibited, under penalty of \$25 to \$100, to "display the flag or emblem of any forcign country on any State, county, city, or town building or public-school house within the State: Provided, however, that when any foreigner shall become the guest of the United States, or of this State, the flag of the country of which such public guest shall be a citizen or subject may be displayed upon public buildings, except public-

school houses."

An addition was made to the statutes on birds, forbidding the killing or trapping of car-

ner pigeons.

A report was received by the Committee on Reads and Public Highways appointed at the January session in 1892. The committee in exarrining the principal highways of the State found attle to commend. In the western part many of the highways traverse very steep hills. A re sation of many of these roads is recommendal

The teral number of miles of highways in the State learned 2,420, of which 248 miles are of maca tarn and 212 of gravel, the rest being common dirt r mila Acts making provision for improcesses of the reads and for maintaining and repairing them were passed, and the office of State Superintendent of Highways was created.

The statute on exster fisheries was amended so as to provide that the Legislature shall elect 5 commissioners of shellfisheries, 1 from each county. The statute on inland fisheries was also amended, and fines imposed for setting traps, weirs, etc., during the close season.

Providence was authorized to borrow \$600,000 for highway work, \$400,000 for school purposes, and \$150,000 for park purposes. A board of canvassers and registration for the city of Provi-dence was created. The Mayor was authorized to contract with the Rhode Island Hospital for the construction and maintenance of a hospital for the cure of contagious diseases. Other acts of the session were:

Providing for a standard form of fire insurance

policy.

Regulating the admission of foreign building and loan associations, and providing for reports and supervision of such associations.

Amending the game laws with reference to birds. Requiring signboards at railroad crossings in let-ters at least 9 inches long—"Railroad Crossing: Stop, Look, and Listen."

An act was passed providing for biennial elections as an amendment to the Constitution, to be submitted to the popular vote if also passed at the May session.

Among the appropriations were the following:

Public schools, \$120,000; Normal School, \$18,000; traveling expenses of students of the Normal School, \$2,000; teachers' institutes, \$500; evening schools, \$5,000; Rhode Island School of Design, including the annual sum provided by the public laws and tuition fees of beneficiaries, \$3,000; purchase of school apparatus, as provided by the public statutes, \$3,000; education of blind and imbecile children, as provided by cation of blind and imbeeile children, as provided by the public laws, \$12,000; free public libraries, \$5,500; State home and school, \$20,000; support of the indigent insane, \$12,000; State printing, \$30,000; State binding, \$5,000; advertising and publishing public laws, \$10,000; militia and military affairs, \$37,500; armory rents, \$6,700; heating and lighting armories, \$1,750; State library, \$25,00; Istate Historical Society, \$1,500; Newport Historical Society, \$500; State Board of Health, \$3,500; State Board of Charities, \$225,000, besides unonex received by them Charities, \$225,000, besides moneys received by them which are appropriated to their use; Society for the Which are appropriated to their use; Society for the Prevention of Cruelty to Children, \$2,500; Prisonens' Aid Association, \$500; State Board of Agriculture, \$15,000; Society for the Prevention of Cruelty to Animals, \$1,000; Soldiers' Relief fund, \$13,000; Soldiers' Relief fund, \$13,000; Soldiers' diers' Home fund, \$22,000; Agricultural College, \$10,000; Institute for the Deaf, \$15,000.

The May session opened at Newport, May 28. The 2 branches were organized, the ballots cast for State officers at the April election were counted, the officers-elect were sworn in, and the new Governor was inaugurated. During the two days of the session the bill for submitting the proposed biennial-elections amendment was passed, additional appropriations were made for the expenses of the State Government, as well as one of \$10,000 for taking the census, \$10,000 for the Board of Agriculture, \$10,000 for use at the armory at Bristol, \$500 for a bounty on wild foxes, and \$10,000 for having the State properly represented at the various expositions to be held in Mexico and other places.

Political.—The Republican State Convention was held in Providence, March 14. The resolutions, after declaring in favor of the party policy on national questions, favored the plan for biennial elections. All the State officers except the Governor were renominated. The new candidate for the governorship was Charles Warren

Lippitt.
The Democratic Convention met the same day, and confined itself to resolutions on the one State issue as follow:

We pledge ourselves to a constitutional convention so the only way to meet the demands of the people of this State. We denounce the proposed biennial amendment to the Constitution as a partisan fraud open the people, unfair and designed to perpetuate the present enemies of the people in power, and call nton all to devote their energies to its defeat.

The ticket was as follows: For Governor, George L. Littlefield; Lieutenant Governor, Augustus S. Miller; Secretary of State, George W. Greene; Attorney-General, George T. Brown; Genéral Treasurer, John G. Perry.

Prohibition and Socialist-Labor candidates

also were nominated.

At the election in April the Republican ticket was successful, the vote for Governor being as follows: Lippitt, Republican, 25,098; Little-field, Democrat, 14,289; Quimby, Prohibitionist, 2,624; Boomer, Socialist-Labor, 1,730. The Republicans elected 35 Senators and 67 Representatives; the Democrats, 3 Senators and 5 Representatives. A special election was held Sept. 25 to vote upon the biennial-elections amendment, and the result was its defeat by a vote of 7,449 in favour to 10,603 against.

ROMAN CATHOLIC CHURCH. The re-

union of Christendom is the subject uppermost in the mind of Leo XIII, and by way of encouragement to effort in that direction at the outset of 1895 he issued an encyclical which is largely an appeal to Christians to eschew nonessentials and gather in Christ's name in one fold under one

The great temple to the Blessed Virgin to be in accordance with the resolution passed at the Eucharistic Congress of Jerusalem-the starting point of the reunion of the Greek and Western Churches—was formally begun during the year, the corner stone being laid at Patra, in Ochala, not far from the place where Christianity for-merly flourished under Mary's auspices. Leo XIII gave the first contribution and called for subscriptions from the whole Catholic world to carry out the pledge made by his representatives at the congress.

Later in the year was issued another encyclical, similar in tenor, in which for the separated brethren of the East and West increased devotion was asked of the faithful to the rusary that all creeds, classes, and nations "may be reunited under the beautiful protection of the Blessed Virgin Mary." But the most important pronouncement from the Vatican was proba-bly the apostolic letter issued on April 14, addressed to the English people, who seek the kingdom of Christ in the "unity of the faith, health, and peace in the Lord." In this re-

markable document Leo XIII says:

God is our witness how keen is our wish that some effort of ours might tend to assist and further the great work of obtaining the reunion of Christenden. and we tender thanks to God, who has as far prolonged our life, that we may make an endeaver in the direction. But since, as is but right, we place to confidence of a happy issue principally and above all in the weederful gover force prowith full considerates, sets the line at a eatte work and we called it to blearte to to all with us to the rithin to seek from him the be f mercered a less to the ter by anestoons dispense in hear pravas

Then follows a history at a me are of the re lations between Home and Logistol and of the love and care of the postiffs from the date of Gregory. While he was sumed in the guam the Pope says, he approved of a ments whom object was prayer for the return of England to the fold of Peter, and the thought has ever been with him that the united and tomble outplications of so many princil in this hads imagine must be hastening the time of their mere ful designs toward the English people. The iss provement of the condition of the people must indirectly help this forward "We have heard he says, " with singular jey of the great attention which is being given in hing said to the solution of the social question and of the establishment of the benefit and semilar mericines whereby on a legal basis the condition of the working classes is improceed " This, the works of charity, the strict public observance of hum day, and the general spirit of respect to the Holy Scriptures, the innumerable agreeree and movements working for the kingdom of God on earth, are all signs of better days and it but needs prayers whereby human effort is supernaturalized in order to produce a ground and lasting results." But corne it's done he urge upon Catholics prayer to the Riesand Vargin, whose aid is asked in the fall war prayer, which he asked all the faithful to regent continually:

O Blessed Virgin Mary. Mother of Gold and one most gentle Queen and Mother livit down in surery upon England thy "downy" and upon in a witer greatly hope and truet in thee. He then it was thus Jesus our harlour and our hope was given such that world; and he has given there to us that we might hope still more. Plead for us the chicken, whom thou didst receive and accept at the fine of the recen () softouful Mother | interceits for our sequented brethren, that with us in the one true field they may be united to the Supreme Shapeerd the boose of the Note Pray for us all, dear Mether than by high fruifful in good with we are at decrease need and praise Good, together with there is not heart my homes.

An answer to this impasso med appeal came in the form of a letter to he Horness night by eminent divines of all denominations in Eagland, followed by a personal visit from Lord Halifas President of the Angloran Charch l'mon Conference, and a rematous by the same

body according the I' go a deare. Los VIII called Cardinal Va ghan to Rome to consuit with him as to practical steps in the indicated direction, but did not flad him at all enthusiastic for systematic action. He found in Ably Duchesne dictator of the French School of History, Rome, a more valuable ally, that distinguished several contending for the exlidity of Anglican orders and being supported by Prof. Bouquillon, of the Catholic University, Washington The Belgian Benedictines opposed the proposition to condemn these opinions, and the lage oculered elence on the subject. As an older explence of his sympathy, he sent a school to

the "Review Anglais," a new periodical published by French priests in Paris, for free distribution among the ministers of the Anglican

Church.

Cardinal Vaughan, in addressing the annual Catholic Conference at Bristol, in September, said the question of corporate reunion of the Churches did not rest upon the validity of Anghean orders, as some supposed. He believed that that subject would be authoritatively decided by Rome in the near future, and he desired it understood that, if it be necessary for the good of religion that the actual archbishop and bishops should efface themselves, gladly would they do so. (See article Reunion of Christendom, in this volume.)

The canonization of Mary Queen of Scots was reported favorably on by the Westminster tribunal in March, and the case was brought to the attention of Rome, the question being simply whether she died a martyr to her faith.

Statistics.—Official tables given out for 1895 by the Propaganda press show the Catholic population of the world to be about 300,000,000, distributed among 1,060 sees. The work of Leo XIII, since his accession to the See of Peter includes the creation and re-erection of 1 patriarchate in the West Indies, 29 archbishopries, 85 bishopries, 2 abbots, 59 vicariates, and 2 apostolic delegates, making in all 194 new titles.

The Sacred College was invaded by death during the year, the demise of 10 cardinals, twice the usual number, being reported. In this list were Cardinals Francis Benaivides y Navarette, of Padua, Archbishop of Saragossa, aged eighty-five; Cardinal Lucien Bonaparte, second cardinal priest in the order of precedence, aged sixty-seven; Julian Florian Desprez, Archbishop of Toulouse, aged eighty-eight; Hamilear Malagola, Archbishop of Fermo, aged fifty-five; Louis Russo-Silla, agel fifty-five; Benedict Saz y Fores, Archbishop of Seville, aged sixty-seven; Cardinal Persico, once Bishop of Savannah, Ga.; and Cardinal Paul Melchers, former Archbishop of Co-

logne, aged eighty-two.

There were 63 cardinals at the end of the year, including the following 9 elevated at the Consistory of Nov. 29: Adolph Louis Albert Perraud, Bishop of Autun, France, born at Lyons, Feb. 7, 1828; Sylvester Sembratowlez, Archbishop of Lemberg (Greek-Ruthenian rite), born at Do-samo, Oct. 3, 1836; Francis Satolli, Titular Areabishop of Lepanto, Delegate Apostolic to the United States, born at Marseiano, diocese of Perugia, July 31, 1839; John Otaller, Arch-tempor Salzburg, born in St. Martin, Passeyer, discound Frient, April 30, 1825; Anthony Maha Casajares v Azara, Archbishop of Vallado-1 1 5 and born at Colanda, Saragossa, May 2, 1 3 Jereme Maria Gotti, O. C. C., Inter-Nun-1 Becal Fitular Archbishop of Petra, March 29, 1834; Achilles Mana-A local of Ancona, born at Bologna, Salvator Cassanas y Pages, B Pop of Cogall Spain, born at Barcelona, See 5 18.4 July Peter Bover, Archbishop of Brazze I - 1 July Peter at Paray la Monial, days 27, 1829.

Italy and the Papacy.—The celebration, on Sept. 21 'the arm or sarv of the entrance of Garibaldi of Rome was noted for the univer-

sal protest that it brought from the Catholic world and the speech of Crispi, in which he enthusiastically eulogized the spiritual character of the papacy, but credited its renewed potency in the affairs of nations to the attitude of the Italian Government. The speech was taken at the Vatican as the culmination of the secret negotiations by which it has been sought to bring the Pope into alliance with Humbert in opposition to the internal conspiracies undermining Italy. Catholic participation in parliamentary elections was the immediate end aimed at by Crispi, and following his address came an almost overwhelming pressure on Leo XIII to withdraw his pronouncements against that participation. While the partisans of compromise between the Vatican and Quirinal went about proclaiming the confession of Crispi, the Pope quietly analyzed the situation, and, recognizing under all the intrigue and all the counsel offered him an attack upon Cardinal Ram-polla, he wrote a letter to his faithful Secretary of State reiterating his inexorable resolve never to recognize the act by which the papacy was robbed of its temporal rights and independence, and reassuring the vacillating and timid of ultimate victory in the ascendency of a Rome that will not be a mere capital of a little political state, but a Rome in truth and in entirety the patrimony of St. Peter, the Catholic and international city wherein the whole world shall be represented and heard. In the letter to Cardinal Rampolla, dated Oct. 9, Pope Leo says:

We have been reduced to become almost immediate witnesses of the apotheosis of the Italian revolution and the spoliation of the Holy Sec. That which most afflicted us is the design to perpetuate rather than to terminate the conflict, of which no one can measure the disastrous effects. The final object of the eccupation of Rome was not to complete political unity, but in destroying the walls of the temporal metropolis to attack more closely the spiritual power of the popes. The object was to change the destinies of Rome, return it to paganism, and give birth to a third Rome and a third era of civilization. . . Nothing will ever confer veritable independence upon the papacy so long as it does not have temporal jurisdiction.

Peter's pence showed the effects of the industrial depression throughout the world, the average of \$1,000,000 yearly being most markedly reduced. France, which furnished three fifths of this, gave evidence of the discontent of a larger portion of the hierarchy, clergy, and people with the papal support of the republic by contributing less than at any time in twentyfive years. There was no change in Pope Leo's policy, however, he refusing to recognize the actions of the Church-hating coterie as expression of either the Government's will or that the republic does not fully represent the will of the French nation. In consequence of the revenue losses, measures of economy were decreed at the Vatican. The consulting members of the congregations have been dispensed with, and the salaries of the members themselves considerably reduced.

The Armenian Question.—Mgr. Azarian, the Armenian patriarch resident in Constantinople, in his advices to the Pope, declares that few of the 150,000 Catholic Armenians have taken part in the uprisings of the year, and that

consequently they have not suffered as much as the Schismatic Catholics and Protestant Christians, although the movement toward Catholic reunion has been somewhat disturbed in consequence. At his Consistory in November, however, the Pope took occasion to refer to the unhappy condition of Armenia and to appeal to Europe in behalf of the whole nation. He contributed 70,000 lires toward the relief of the sufferers by the Turkish barbarities.

Korea.—Persecution of Christians in Korea was reported by Mgr. Mutal, head of the Catholic missions, who declared that 15,000 of his congregation were being hunted like wild beasts, and were compelled to find refuge in the mountains. All the missionaries in the province of Tehyoung-Tohyeng were compelled to flee to the coast under the protection of French gunboats.

Russia.—A most cordial understanding between the Czar and the Pope was foreshadowed by the visit of Prinee Lebanoff to the Vatican, tearing an autograph letter from Nicholas II to Leo XIII at New Year's. On Dec. 30, 1894, the prince and M. Alexander Tswolsky, the new Russian minister to the Holy See (and the first since the breaking of friendly relations between the 2 courts twenty-eight years ago on account of the persecution in Poland), had a protracted interview with the Holy Father. After presenting the Czar's letter, Prince Lebanoff said he was happy to fulfill an office that enabled him to express his veneration for the Pope and to convey the good will of his Majesty the Czar, whose policy was pacific. The Pope replied that he always supported the principles of order and prace, such as inspired the Czar.

Cardinal Rampolla gave a dinner in honor of the envoy the day following, and later the courtesy was returned by the Russian minister. It was aunounced that the revocation of the anti-Catholic decrees in the ukase of 1885 was to be permanent. A rupture of these pleasant relations was threatened by the news of fresh outrages in Poland in the autumn; but new assurances being received at Rome, the Pope decided to send a cardinal as envoy to represent him at the fêtes in honor of his coronation in the spring

of 1896.

"The Primacy of the Christian Churches" is the title of an encyclical, on which the Holy Father puts in most of his spare time, and which he considers the crowning effort of his work for

Christian reunion.

Church and State.—The conflict between Austria and the Vatican continued unabated throughout the year, the Austrian Government insisting upon the recall of Mgr. Agliardia, ispal nuncio at Vienna, who sustains the Hungarian hierarchy in their determination to resist the civil marriage laws and other obnoxious measures, and the Pope steadfastly refusing to accede to the Government demand. At the close of the year there were indications of a better feeling, the Pope, in answer to Empered Joseph's most urgent request, intinating that he might make the recall for good where he creates Mgr. Agliardi a cardinal at the March Consistory.

Consistory.

The Church troubles in Guatemala caused negotiations to be begun by Monsigner Satural looking to a resumption of friendly relations

The papal delegate, in 1 to the a Government, requesting that it is gua which has sent fir. Makes the envoy extra relitary and minister ary to the Holy New send a represent the Rome, and thereby take the residued medical curing a perfect understanding between their and state.

The Church and Evolution.—Here Lee Lee Labor.
Professor of Physical Sciences at Notre Banne.
Ind., started quite a discussion by his address

tions of the republic are among the things the clergy are exhorted to inculcate. The industrial workers are warned against violence while seeking to improve their condition, and are admonished to shun the dangerous secret societies condemned by the Church. Catholic journalism is encouraged, but unanimity among journalists and due respect for episcopal authority must be

maintained

The United States,—The summary of the Church's status in the United States at the close of 1895 shows the number of archbishops to be 14; bishops, 69; priests, 10,348; churches with resident priests, 5,853; missions with churches, 3,648; stations and chapels, 5,393; universities, 9; seminaries (secular), 26; students, 1,743; high schools for boys, 187; high schools for girls, 633; parishes with schools, 3,361; children attending, 796,348; orphan asylums, 243; orphans, 33,064; charitable institutions, 933,944; Catholic population, 9,440,790; Catholic papers and magazines, 249. Death carried off 1 archlushop and 4 bishops, 233 priests, and 170 religious.

Rt. Rev. John M. Farley, Vicar General of New York, in answer to the request of Archbishop Corrigan, was created auxiliary bishop

of the diocese on Oct. 9.

The mission built nine years ago by Miss Kate Drexel on Crow Creek Indian Reservation, South Dakota, was destroyed by fire, Oct. 3, several of the Indian children narrowly escaping

death.

The resignation of Rt. Rev. Mgr. Denis J. O'Connell as rector of the North American College was supposed to have some bearing upon the ecclesiatical controversies going on in the United States for some years, Mgr. O'Connell being known as a friend of Archbishop Ireland. The elevation of Rev. Dr. Thomas O'Gorman, of the Catholic University, to a bishopric was, on the other hand, quoted as an offset to any supposed significance in the resignation, the latter being the alter ego of the archbishop. Mgr. O'Connell was succeeded by Rev. William O'Connell, of the archbiocese of Boston, whose position is announced as that of a strict neutral in all matters affecting ecclesiastical prestige in the United States.

The Catholic Historical Society marked the resting place in St. James's churchyard of Peter Turner, the Catholic pioneer of Brooklyn, by a partic best creeted with notable ceremonies, the best were by Bishop McDonnell and Mayor

up-country parish, but it was decided against the priest.

The elevation of Mgr. Satolli to the cardinalate, in November, was taken as the crowning act in the establishment of the Apostolic Delegation

at Washington.

The Catholic Temperance Convention held at Carnegie Hall, New York, in August, was a remarkable demonstration in favor of the Sundayclosing movement in that city. It was addressed by Mayor Strong and Police - Commissioner Roosevelt.

Two institutions of learning were dedicated during the year—the McMohat Hall of Philosophy of the Catholic University, in October, and the magnificent theological seminary of St. Paul, the gift to Archbishop Ireland, by James J. Hill, a Protestant admirer, Sept. 4.

The Catholic summer-school idea appears to have taken hold in earnest, not only that at Plattsburg. N. Y., being successful, but two others at Pittsburg, Pa., and Madison, Wis., bid-

ding for favor.

The first Eucharistic Congress held in America was opened in Washington, Oct. 2, by Mgr.

Satolli.

The missions to Protestants, by the Rev. Walter Elliott, of the Paulist Fathers, in the West, have proved successful, and a new society in support of them, called the Apostolate of St. Francis de Sales, was approved by Bishop Horstmann, of Cleveland, in October.

Rev. Dr. Fred. C. Rooker, Secretary to Mgr. Satolli, gave the Catholic view of education and religion by request at the centennial commencement of Union College, Schenectady, N. Y., June 23, in the presence of a distinguished as-

semblage of Protestant ministers.

Great Britain.—The foundation stone of the projected cathedral for Westminster was laid by Cardinal Vaughan June 29. It is on the site of the old Tothill Field's Prison as secured by Cardinal Manning. The edifice will be 350 feet long, 156 feet wide, and 90 feet high, with a 300-foot tower. The Duke of Norfolk subscribed £10,000 toward the work. The cathedral will be placed in charge of the Benedictines.

A vicar apostolic for Wales was appointed in July. He is the Rev. Father Francis Mostyn, of the diocese of Shrewsbury, England, and his

new charge covers 12 counties.

Germany.—The third German Catholic Congress at Bingen, Hesse, June 30, was attended by 10,000 persons. Among the resolutions passed were the following:

"The independence of the Pope and the Holy See,"
"Free exercise for ecclesiastical power in flesse,"
"Re-establishment of the religious orders," "Restitution in favor of Catholies by statutory guarantees,"

of the Catholie press."

Portugal.—The International Catholic Congress at Lisbon, which began June 13 and continued to the end of the month, was held in Commemoration of the seventh centenary of St. Anthony of Padua, and the like of it has not been seen in Portugal since the Middle Ages.

Australia.—Catholic progress here is shown by the new census, which places the Catholic strength as 21:10 per cent, of the population.

Canada. - The Manitoban school question developed into considerable proportions during the year, the Dominion standing by the guarantee of separate schools for Catholics, but Manitoba, on the contrary, voting in the autumn elections, by an overwhelming majority, against it. The controversy still goes forward. The Episcopal Synod of Fredericton, New Brunswick, resolved in June to unite with Catholic and other denominations in a demand for religious teaching in the public schools.

Ireland.-The centennial celebration of St. Patrick's College, Maynooth, June 25, was the occasion of a gathering of Irish priests from every part of the world. It lasted three days. Cardinals Logue and Vaughan participated.

A memorial altar to the illustrious Archbishop Hughes of New York was conscerated Sunday, Jan. 20, in the parish church of his native Onagh, County Tyrone. A movement was started and £700 subscribed in April toward a witable memorial to Rev. Thomas N. Burke, O. P., the great Dominican preacher, in Galway, where he was born. All Hallows' College, Drumcondra, the great missionary college, was almost totally destroyed by fire in May.

The Irish bishops, at their October meeting in Maynooth, issued a pronouncement against the antireligious writings of the Parnellite factional

newspapers.
ROUMANIA, a constitutional monarchy in eastern Europe, comprising the former Turkish provinces of Wallachia and Moldavia, which beame tributary principalities in 1859 and were united in 1861, declared independent of Turkey in 1877, and erected into a kingdom in 1881. The Legislature consists of a Senate, of 120 members. eted for eight years, and a Chamber of Depus, containing 183 members, elected for four ars. Suffrage is in three degrees. The reigning King is Carol I, born April 20, 1839, a prince of Hohenzollern-Sigmaringen who was elected Down of Roumania in 1866. The Cabinet in the ginning of 1895 contained the following mem-: President of the Council and Minister of the Interior, L. Catargi; Minister of Agricialture, Industry, Commerce, and Domains, P. P. Carp; Minister of Foreign Affairs, A. Lahovari; Minister of Finance, M. Germani; Minister of Public Works, C. Olanesco; Minister of Public Instruction and Worship, Take Jonesco; Minister of War, Gen. C. Poenaro; Secretary of the Council, A. Diamandesco. Roumania covers 48.-307 square miles and has a population estimated 4 5,800,000. The number of births in 1894 was 227,469; of deaths, 176,483; of marriages, 50,323.

Pinances.—The revenue for 1894 was 219. 7.336 lei, or francs, and the expenditure was 199,261,160 lei. The budget for 1896 makes the total receipts 209,800,000 lei, of which 32,390,000 lei come from direct and 63,410,000 lei from indirect taxes, 48,700,000 lei from state monopelies, 28,436,000 lei from domains, and the remainder from the various departments. Of these revenues the public debt absorbs 73,975,262 len. 41.016,134 lei are spent on the army, 26,161 920 lei go for public instruction, 21,350,642 let are aliotted to the Interior Department, and 25,631. 186 lei are required for financial administration, 5,950,349 for the administration of the domains. 6,318,500 lei for the administration of public works, 6,625 926 let for justice : for diplomar

The tills and other reverse in 1804 amounted to 1671 will frame and expenses to 4267 776 frames. The number of vessels that entered the Sulivia mouth in 1804 was 1 316 of 1,619 303 tome. Of thew Till were English stramers, of 1.004.09; there Ist were tired steamers, of 140 cm ! or and the were threek sailing would, 4 21 1 a and 352 Turkish sailing vessels, of 57 786 corn

692 RUSSIA.

Austrian steamers numbered 65, of 65,891 tons; and there were 99 French steamers, of 43,347 tons; 37 Russian steamers, of 45,774 tons; 46 German steamers, of 42,537 tons; 26 Norwegian steamers, of 30,880 tons; 18 Italian steamers, of 20,486 tons; and 9 more steamers from Belgium, Spain, and other countries, and 19 French, Austrian, Roumanian, and other sailing vessels. The export of wheat in 1894 was 3,491,000 quarters; of rye, 927,000 quarters; of maize, 4,516,000 quarters; of barley, 2,627,000 quarters.

Politics and Legislation.-The Legislature in the early part of 1895 passed new mining laws. For miners and quarrymen a pension fund and benefit associations were established, to which the men are compelled to give up 5 per cent. of their wages and the mine owners to contribute an equal sum. The Senate passed by a large majority a bill permitting foreigners to conduct miming operations in Roumania, reversing the traditional policy of the Conservative party. which has been opposed to the bestowal of privileges upon foreigners. The Government endeavored to curb the Roumanian agitation in Transylvania, and when a large number of Italian deputies sent a telegram expressing sympathy for the Roumanians who were subjected to Magyarizing measures no notice was taken of it by the Government or the Chamber. Roumanians in Turkey generally regarded the Macedonian agitation as dangerous to the preservation of their nationality, and the Government took rigorous measures to suppress an attempt of Bulgarian and Russian agitators to gain men and money for the revolution. Two merchants were arrested in Bucharest with arms in their possession, and many foreign agitators were expelled from the country. The Roumamans in Macedonia have much more wealth than the Bulgarians and, next to them, are the most namerous element.

In October the coalition Cabinet was broken up by the resignation of its Junimist members-Carp, Marghiloman, and Germani. The Premier asked the King to sanction a dissolution, and when this was refused the whole Cabinet resigned. The King sent for Demeter Sturdza, who, on Oct. 15, formed a Liberal Cabinet, compresed as follows: Premier Minister and Minister of Foreign Affairs, Demeter Sturdza; Minister of Justice, E. Statesco; Minister of Public Instruction and Worship, P. Poni; Minister of War, Gen. C. Budisteano; Minister of Finance, Gerg C. Cantacuzmo; Minister of Agriculture, Indicate, Commerce, and Domains, G. D. Pal-Muster of the Interior, M. Fleva; Min-" or de lared hunself an advocate of the the oppressive taxation and the imthe condition of the peasantry. executive department; a Council of State, which examines and passes upon projects of law submitted by the ministers; a Ruling Senate, which superintends the judiciary and watches over the general administration; and a Holy Senate, which directs religious affairs. The reigning Emperor is Nicholas II, born May 6, 1868, who succeeded his father, Alexander III, on Nov. 1, 1894. The ministers who were in office at the beginning of 1895 were: Minister of the Imperial Court and of Domains, Count J. J. Vorontsoff-Dashkoff; Minister of Foreign Affairs, Nicholas de Giers: President of the Council, N. C. de Bunge: Minister of War, Gen. P. S. Vannovsky; Procurator General of the Holy Synod, K. P. Pobedonostzeff; Minister of Education, Count J. D. Delianoff; Minister of Ways of Communication, M. Krivoshein; Minister of Agriculture and Domains, A. S. Yermoloff; Controller General, T. J. Filippoff; Minister of Justice, N. V. Muravieff: Minister of the Interior, J. D. Durnovo; Minister of Marine, Admiral N. M. Tchikhatcheff; Minister of Finance, S. J. Witte, D. M. Solsky, M. Ostrovsky, M. de Plehve, and N. J. Stovanovsky were ministers without portfolios, and the Grand Dukes George, heir apparent, and Vladimir, Alexis, and Michael were members of the Council of Ministers. After the death of M. de Bunge, the presidency of the Council was assigned to J. N. Durnovo, who was succeeded as Minister of the Interior by J. L. Goremykin. When M. de Giers died, also in January, Assistant-Minister Shishkin took charge of the Department of Foreign Affairs provisionally until it was committed, on March 19, definitely to Prince Lobanoff-Rostovsky. Ministry of Ways of Communication was transferred to Prince Khilkoff early in January. Gen. Count Protassoff entered the Council as adjunct to Admiral Tchikhatcheff.

Finances.—The budget estimate of ordinary receipts for 1895 was 1,142,957,006 rubles, besides which 2,000,000 rubles of extraordinary receipts were counted upon and 69,421,024 rubles were available from the 3-per-cent, loan of 1891 to balance the expenditures, estimated at 1,214,-378,030 rubles, including 94,283,092 rubles of extraordinary expenditure for railroad construction. Of the ordinary receipts, 101,557,788 rubles come from direct taxation; 584,170,741,896 rubles from indirect taxes; 63.582,700 rubles from stamps, etc.; 42,297,106 rubles from mines, posts, and telegraphs; 248,712 rubles from railroads domains, and other state property; 87,776,325 rubles from repayments of loans to peasants; and 78,442,150 rubles from repayments of other advances and from other sources. Of the ordinary disbursements, 227,417,014 rubles are for the public debt, 2,368,873 rubles for the superior Government bodies, 13,648,893 rubles for the Holy Synod, 11,769,264 rubles for the Ministry of the Court, 4,895,749 rubles for the Ministry of Foreign Affairs, 271,161,313 rubles for the Ministry of War. 54,923,509 rubles for the Ministry of Marine, 144,346,392 rubles for the Ministry of Finance, 31,409,378 rubles for the Ministry of Domains, 86,782,146 rubles for the Ministry of the Interior, 23,600,125 rubles for the Ministry of Public Instruction, 152,745,292 rubles for the Ministry of Roads and Communications, 26,148,870 rubles for the Ministry of

Justice, 5,386,928 rubles for the Controller General, 1,501,192 rubles for the imperial stud, and 12,000,000 rubles for unforeseen expenses.

The extraordinary expenditure of 94,283,092 rubles on railroads includes 49,816,515 rubles for the Siberian Railroad, 2,160,309 rubles for works connected with it, 32,306,268 rubles for other railroads of general utility, and 10,000,000 rubles for local roads of simplified construction.

There was a free balance in the treasury on Jan. 1, 1894, of 259,002,389 rubles. The gold accumulated in the treasury amounted to 237,000,000 rubles. A law was promulgated on May 29, 1895, permitting gold contracts, which have

heretofore been forbidden.

The Army.-The empire is divided into 13 military circumscriptions, each of which can put an independent army into the field, 6 in Europe and the Caucasus, and 7 in Asia. The European troops are organized in 22 army corps, each containing 2 divisions of infantry, except the guards and the grenadier corps, which have 3 divisions. The active army of Europe and the Cancasus comprises 48 divisions of infantry, 22 divisions of cavalry, 48 brigades of field artillery, and 44 batteries of horse artillery. Outside the corps formations are 39 squadrons and sotnias of cavalry, 74 battalions of riflemen, 36 batteries and 8 companies of artillery, 7 brigades of engineers, and 5 battalions of train. In 1895 2 new regiments were created in Siberia, and 4 mortar batteries and 22 batteries of light artillery were formed, with 196 pieces. The Berdan rifle of the infantry is being replaced by the re-peating rifle of the model of 1891, having a caliber of 7.62 millimetres and a magazine for 5 cartridges. The whole army will have been supplied before the middle of 1896. The Czar sent in August, 1895, to the Prince of Montenegro a cargo of 30,000 of the Berdan rifles, with 15,000,000 cartridges, cannon, machine guns, dynamite, and other war material as a present. The cavalry is armed with the Berdan carbine and the saber, and the men in the front ranks carry lances. The nominal strength of the army is as follows: 17,943 infantry officers and 878,636 men. 3,396 cavalry officers and 100,048 men. 2,505 artillery officers and 85,226 men, and 668 engineer officers and 26,350 men, constituting the field army of 24.512 officers and 1,090,260 men; 14,359 officers and 788,450 men of all arms in the reserve; 2,340 infantry officers and 143,-550 men, 1,288 artillery officers and 75,554 men. and 206 engineer officers and 7,236 men, making altogether 3,834 officers and 226,340 men garrisoning the fortresses, and 5,285 officers and 300,-412 men in the second reserve. The war footing has been estimated to be 2,532,496 officers and men, with 577,796 horses and 5,264 guns.

The Navy.—The fleet in the Baltic Sea comprises 8 armor-clad turret ships ("Peter Veliks," "Alexander H," "Nicolas I," "Navarin," "Sessoi Veliky," "Sebastopol," "Petropavlovsk," and "Poltava"), of from 8,750 to 12,000 tons displacement and 14 to 18 inches of aring and armed with 2 or 4 12-inch guns, with a substitution ary armament of 6-inch guns and numerous quick-firing guns; I casemated armoral ad ("Gangout"), of 6,628 tons; 2 new month read floating batteries; 4 turret ships; 12 old month tors; 8 armored cruisers ("Runk," "Admiral

694 RUSSIA.

pected to divert a large part of the grain exports of St. Petersburg to the Black Sea; but the trade of the capital and the prosperity of northern Russia will derive advantages from the important new line from Vologda to Archangel, from one that will furnish an outlet for the products of the Government of Viatka, from one that will run from St. Petersburg to Kemi, in Lapland, and from others that have been begun or are projected. A direct line connecting St. Petersburg with the terminus of the Siberian

Railroad is in contemplation.

The entire line of the Siberian Railroad, which is divided into 7 sections, is 7.112 versts. or 4.713 miles. The appropriation made for its construction is 350,210,482 rubles. The work is being pushed from Cheliabinsk and Vladivostok, the termini, and from Irkutsk east and west. The work on the eastern sections, which have been advanced more rapidly than the other parts, was done partly by hired Chinese and Korean laborers and partly by convicts, who re-ceive immunities and pay for their labor. The work of criminals on the middle sections has been satisfactory, but the engineer of the Ussuri section preferred Koreans, and sent back 2,000 convicts that were sent from Saghalien. there was an expenditure of 15,000,000 rubles beyond the estimate on this section, a commission was appointed to investigate the matter.

Posts and Telegraphs.—The post office in

Posts and Telegraphs.—The post office in 1893 carried 189,830,000 domestic and 25,006,000 foreign letters, 32,920,000 domestic and 4,597,000 foreign postal cards, 172,663,000 domestic and 18,106,000 foreign newspapers and circulars, and 15,225,000 domestic money letters with a declared value of 15,281,607,000 francs. The receipts of the post office were 94,107,432, and of the telegraph service 47,724,832 francs, while the expenses of both services were 98,351,-

448 francs.

The telegraphs had in 1893 a total length of 78,416 miles, with 154,762 miles of wire. The number of internal messages was 10,603,020, and of foreign messages 796,111 were sent and 826,-

011 received.

Finland,—The Grand Duchy of Finland has a Legislature in which the 4 estates of the nobility, the clergy, the burghers, and the peasants are represented. Gen. Count Heyden is the Governor General and Commander in chief of the troops of the circumscription of Finland. The population consists of 2,112,000 Finns, 372,000 Swedes, 6,700 Russians, 1,750 Germans, and 1,440 Lapps. The number of marriages in 1893 was 14,095; of births, 75,150; of deaths, 53,122. The revenue for 1895 is estimated at 67,615,174 marks or francs, and expenditure at the same figure. The public debt is 73,180,430 mass. The imports in 1894 were valued at 1.5 Delicationarks, and expents at 136,000,000.

Politics and Legislation.—The new Czar Later that the did not instituted by the first the asternal policy instituted by the first the strength Cen. Courko was relieved from the Czar Later than the Czar Later than the Czar Later than the Czar Later than the court of the Czar Later than the Czar L

ods in the way of making Poland Russian and orthodox. The removal of the Jews from their homes outside the pale was renewed after an intermission, and the emigation movement thus received a fresh stimulus. Orders were issued closing the health resorts and mineral springs of Russia and the Caucasus to Hebrew invalida The students of St. Petersburg, Moscow, and other universities wished to petition the Czar to change the obnoxious regulations lately introduced in the higher educational institutions, but were compelled by the authorities to desist. The police brutally mishandled some riotous students in St. Petersburg; and later some of the police officials sought to gain credit by making many arrests of supposed Nihilists and reviving the political prosecutions. When representatives of Zemstvos waited upon the Czar. expecting a declaration of his sentiments re garding the mooted question of local self-government, he expressed himself to the delegations on Jan. 29 in a way that disappointed the advocates of constitutionalism:

I am pleased to see here the representatives of all classes assembled to express their feelings of loyalty. I believe in the sincerity of these sentiments, which have always been characteristic of every Russian. But I am aware that in certain meetings of the Zemstvos voices have lately been raised by persons carried away by absurd illusions about the participation of the Zemstvo representatives in matters of internal government. Let all know that, in devoting all my strength to the welfare of the people, I intend to protect the principle of autocraey as firmly and unswervingly as did my late and never-to-be-forgotten father.

The Government control over the commercial industrial, and social activities of the country is extending. The peasantry are being assisted in new ways, and the financial affairs of the nobility are being taken under the supervision of the Government. The pawnshops have been brought under Government direction, as well as the drink traffic. New banking laws empower Government officials to dictate to banks regarding the management of their affairs and the loaning of their funds. Stringent regulations have also been imposed upon the operations of stock speculators and all the transactions of the bourse. The laws of factory inspection and regulation, already very strict, have been thoroughly revised.

A new penal code, on which experts have been at work since 1881, was completed in 1895. The commission collated all the penal laws of the empire and those of the most enlightened countries, and studied the theories of scientific penology; and, after preparing a general outline of their scheme, submitted it to expert jurists of various countries for criticism. The first result of the commission's work was the enactment of laws in 1884 and 1885 for suppressing workhouses and houses of reclusion. Corporal punishment in prisons was abrogated, and at the suggestion of the commission laws were enacted against usury and the frandulent acts of officials.

A commercial treaty was concluded with Greece; and on June 11 one between Russia and Japan was signed at St. Petersburg, similar in its provisions to those already made by Japan with Great Britain, the United States, and Italy.

SALVADOR, a republic of Central America. The legislative power is vested in a single Chamber of 42 members, elected for each annual session by direct universal suffrage. The President is elected by universal suffrage for four years. Gen. Rafael Antonio Guttierez was proclaimed Provisional President in June, 1894, by the army that expelled Gen. Carlos Ezeta, and was afterward elected for the term beginning March 1, 1891, with Dr. Prudencio Alfaro as Vice-President. The Cabinet was constituted as follows: Foreign Affairs, Justice, and Public Instruction, Dr. Jacinto Castellanos; Interior, Dr. Prudencio Alfaro; Finance and Public Morks, Dr. Cornelio Lemus; War and Marine, Estanislao Perez. The area of Salvador is 8,100 square miles. The population was 803,354 at the end of 1894.

The treasury accounts for 1894 make the revenue \$8,818,000 in silver, of which \$4,004,000 came from import duties, \$902,000 from the export duty on coffee, \$1,978,000 from the impost on brandy, \$66,000 from stamps, and \$1,868,000 from other sources. The disbursements were \$5,569,000, of which \$2,675,000 were spent by the Minister of War, \$1,138,000 by the Minister of the Interior, \$3,378,000 by the Minister of Finance, \$213,000 by the Minister of Public Instruction, \$651,000 by the Minister of Public Works, \$78,000 by the Minister of Foreign Affairs, and \$299,000 by the Minister of Public Safety. The internal debt on March 31, 1894, amounted to \$11,000,000, and the external debt to \$254,000.

The imports in 1894 were valued at \$2,171,-000, and the exports at \$6,611,000. The exports of coffee amounted to \$5,035,000; indigo, \$1,120,-000; tobacco, \$100,000; ores, \$82,000.

There are 54 miles of railroad and 1,803 miles of telegraph wires

of telegraph wires.
Political Disturbance.—A futile attempt at a counter-revolution was made in 1895 by the followers of Carlos and Antonio Ezeta. On Feb. 1 a conspiracy to proclaim Gen, Antonio Ezeta President was discovered. Col. Delfino Berrios and other leaders were ordered to be shot. Col. Angel Vasquez, the former chief of police, was taken from jail and lynched. Florencio Bustamente, after remaining for some time in Mexico plotting for the return of the Ezetas, afterward went to Nicaragua, where he was arrested by the authori-ties and escorted on board an American passenger steamer, the "City of Sydney." When this vessel entered the port of La Libertad the Salvadorean authorities demanded the surrender of the refugee, and the captain finally gave him up. In September ex-President Ezeta, who had been collecting arms and carrying on a brisk correspondence with his partisans, left San Francisco for Mexico with the intention of joining his supporters there and entering Salvador to head a revolution. An insurrection was started at Sonsonate, but it was speedily suppressed after a fight in which most of the leaders were killed or captured. Some of the weapons that Essta

had were taken from him by the Mexican Au-

thorities, and when he found that Precious Guttierer was informed of his movement to a claude to hold in check his adherents in balance in he relitinguished his design.

he relinquished his design.

SALVATION ARMY. Attention was called in the twenty-eighth year's report of the balls. tion Army for 1865 to the fact that, with an increasing expenditure on fereign and heather work, the management expenses of the central bradquarters had rather derreased than other wise; also, that apart from the gifts of the malvaluation themselves, the throne of the arms in proportion to its responsibilities was " positively insignificant." The general income and expenditure account for 1884 amounted to £28.145 while £18,480 were raised for the Jululee found. army had 11,335 officers, who preached in 29 languages at 4,600 state on or towne, and 36,136 voluntary officials operally selected and apquisted to take definite work Hamane in Franker and the scattered populations of Queensland, California, and the Northwest Provinces of Canada were reached by means of mounted outriders. Much work was done for the army and many in England and India. The operations and accounts of the "Darkest England" scheme were not included in this report.

The Salvation Army in the United States returned in December, 1895. Number of corpu and outposts, 664; of officers accepted candidates, and persons employed, 2,009. Bender that 587 corps and 77 outposts, the army had 14 sham posts, 6 rescue homes, 3 food and shelter deposts, 5 outriders circuits, 20 training garranus, and 2 labor bureaus. "Slum work "had been done in the cities of New York, Brooklyn, Boston, Pholadelphia, Chicago, Buffalo, and St. Leson. The following summary is made of the work of six months:

Souls navel, 1,160, families visited 11.11 macrossus and dives visited 45.741; persons due to the more account and in salesons, 74,000, more target on salesons or 7.4,000, newtraget on salesons visited 12.500, persons attended mentings, 194,154, children attended sentings, 9.100 heavisian and persons visited 12.500. The mileson entermination is halfo of the army in the formal blades for some mention was estimated at 11.000, who the work night some gregalisms numbered 1,000,044.

SAMOA, a monage by in the Pacelle Groun, declared independent and neutral by a treaty concluded at the Samoan Conference in Beetin on June 14 1890 between formant, formal Bettanii, and the United States. King Malieton Laupena, who had been deported during the tierman occupation, was restored on Beetin 1805. The Chief Justice, appended under the treats in Henry Cliffe of Vermont. The President of the Municipality of Apia and advance to the king is E. Schmudt. These efficients received a latera of \$6,000 and \$5,000 respectively. The king's allowance is \$100 a menth.

The area of the 14 volcanic islands from another kingdom is 1,700 square miles. The relative polision numbered 33,363 in 1887. The strength to the Polynesian race, and profession

Christian religion. There are 450 foreign whites and 800 or 1,000 contract laborers from other islands. The revenue collected from foreigners was 141,919 German marks in 1894, of which 20,013 marks came from direct taxes, 8,857 marks from a tax on buildings, 94,005 marks from import duties, and 18,144 marks from export duties. Of the total, Germans contributed 66 per cent., English 14 per cent., Americans 9 per cent., and other foreigners 11 per cent.

The dutiable imports in 1894 were valued at 1,791,540 marks, of which 912,231 marks were imported by German, 363,055 marks by British, 270,067 marks by American, and 246,187 marks by other houses. The exports amounted to 1,288,545 marks, of which the Germans exported 1,205,093 and the British 83,452 marks. The exports consist of copra, cotton, coffee, and

fresh fruits.

The system of government and international control created by the Berlin final act has proved ineffective. The King has never been recognized by the Tumua party, and the people of his own party pay no attention to the edicts issued in his name. The President of the Municipality of Apia has neglected to pay him his allowance, leaving him often without the necessaries of life. None of the islanders will pay the poll tax of \$1, and the revenue collected from foreign traders has diminished and trade is falling off because the natives under the lawless conditions that prevail get out less and less copra. Except on the German plantations, production has almost ceased. Arms and ammunition were smuggled in for the rebels from New Zealand. Tamasese and his allies attacked the tribes belonging to the King's party, but before November hostilities were at an end. The commission appointed to investigate the land claims of foreigners found that Germans had legally secured titles to a large part of the best land, but that many of the claims presented by British and Americans were invalid.

SANTO DOMINGO, a republic in the West Indies occupying the eastern part of the island of Hayti. The Congress, a single chamber of 22 members, and the President are elected indirectly for four years. Gen. Ulises Henreaux was re-

elected for his third term in 1892.

The treasury receipts in 1894 were \$2,756,-929, of which \$2,674,446 were derived from customs The public debt on Dec. 31, 1894, amounted to \$1,905,035 sterling, \$2,058,415 in gold and

\$4 780,520 in currency.

I m imports in 1894 were valued at \$2,898,-(i) and the exports at \$5,383,471. The princito exports at \$5,383,471. The principles of the

breadstoffs, and provisions, relations with France were broken to a sequence of the seizure by the The of depunded restitution and ANY WIL tel for twenty-two months ' - Frank merchant at Sa-W | 1 | 1 | 10 mara, \ that mardered at the instigat thorntes san' i mutago proposid to submit

the differences to the arbitration of Spain, but the arrangement was not consummated, January, 1895, French war ships went to Port an Prince, and thence the admiral telegraphed that unless a settlement was made at once he would proceed to Santo Domingo and seize the customhouse. President Heureaux replied defiantly and prepared for a bombardment. Meanwhile the United States Government intervened. intimating that it could not view with indifference military action against Santo Domingo. Negotiations were resumed, and in the end the Dominican Government agreed to apologize for breaking the seals placed by the French consul on the Banque Dominicaine and to restore the money seized, and refer the dispute with the bank to the arbitration of Spain; to pay Capt. Boimare 1,000,000 francs as compensation for illegal imprisonment; and to pay an indemnity of 225,000 francs to the family of Cacavelli, whose murderer had been executed already. The French minister arrived in Santo Domingo with Admiral Fournier on April 16, and they were received with honors by the President and welcomed by the populace. The dispute between Santo Domingo and Hayti regarding the boundary, which has often given rise to friction and hostile demonstrations, has been referred to the arbitration of the Pope.

An uprising against the Government occurred in the middle of October, at Banica, a town on the frontier of Hayti. President Heureaux promptly dispatched troops, who killed all the rebels, giving no quarter. In other places in the northern and eastern parts of the country where the people were organized for rebellion, numerous arrests were made, and many persons were

court-martialed and shot.

SEARCH LIGHT .- The search light is not a modern invention; the principle involved in its construction has been familiar for centuries, though, like the telescope, its exact origin is uncertain. He who first placed a light in the focus of a concave reflector was its inventor. All headlights to locomotives are search lights, though, from the thinness of the material employed in their construction and their liability to change form because of expansion and contraction by heat and cold, and for other reasons, they are

very imperfect ones.

Of the four curves that may be cut from a cone—the circle, the ellipse, the parabola, and the hyperbola-the last only will parallelize the rays from a light set at its focus. Until recently all lighthouse illumination was produced by the oil lamp greatly intensified by the Fresnel lens, but the more recent introduction of the electric are light has wrought a revolution in the science of parabolized lighting, and has given a largely increased penetration through fog. The light thus produced, reflected from a parabolic mirror, has been named the search light, and is the most intense artificial light known, being limited only by the power of the dynamo generating the electricity therefor. At the introduction of the electric search light the rays were parallelized by parabolic reflectors of metal, and later by parabolic lenses, which soon displaced the long-used Fresnel lenses. The Mangin projector, as it was called, stood foremost among search-light projectors for many

years until, owing to its greater efficiency and chespness, the parabolic glass mirror largely supplanted all other forms of projectors.

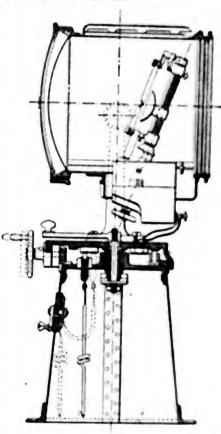

An incident ray from the arc light at the axis of the mirror and at its focus is on entering the mirror bent toward the normal and on its sait is turned away from it, so that the parabolic glass reflector gives less chromatic dispersion than the Mangin lens and also subtends a greater solid angle, reflecting all rays within an angle of 145°. For the greatest utilization of the light of the arc the crater on the positive whon must be in focus and face the mirror.

The search light which attracted so much attraction at the Columbian Exposition of 1893 and the Midwinter Fair of California in 1894 is now a Echo Mouhtain, Los Angeles County, where it seamands the extensive San Gabriel valley, and its beam gives a light sufficient for the reading of a newspaper 35 miles distant. Not only this, but its piercing ray, though emanating 35 miles from the Pacific coast, is plainly visible at the island of San Clemente, 105 miles and at sea. How much farther the ray could be seen were it not for the convexity of the orth we can not know. As the construction essentially the same in all, a description of the less Mountain search light, which, except for the greater size and penetrative power, is a countrapart of those used on shipboard, will suffice.

The reflector, made in Paris, is of optical places, 5 feet in diameter and at the edge 3½ sches thick, though its center is only one sixtenth of an inch thick. Apparently it is free from spherical aberration and reflects the luminous beam sensibly parallel. Its weight is 800 pounds, and it is mounted in a metal ring weightag 730 pounds. The combined weight of mirror, ring, and cover is about 1,600 pounds. The tabe, at one end of which this mirror is mounted, is like an immense drum, and its door consists of a metal rim in which are fixed plate-glass trips A inch thick and 6 inches wide

ps A inch thick and 6 inches wide, he electric lamp, which slides upon ways atd to the bottom, is 6 feet high and weighs pounds. Its carbons, manufactured espely for it, are brought from France. The upor positive carbon is 11 inch in diameter 22 inches long, with a 15 inch core of carbon running from end to end through enter. The lower or negative carbon is the in diameter, is 15 inches long, and has also re of soft carbon through its center. The t of this cylinder of soft carbon is, in the tive carbon, to facilitate the formation of "crater," and in the negative carbon, to ent that of the "mushroom." The positive on is set a little in front of the negative, thus nearly all the intense light of the incent crater is cast upon the mirror. zimum current at which this lamp operates is ampères, which gives the lamp a luminous saity of 100,000 candles and the reflected a total luminous intensity of 375,000,000 All the devices for adjusting the postof the carbons and the lamp are brought h the drum to the outside, and are arod in close proximity to one another at one that all may be manipulated by the for without moving from his position. tube may be moved, both in azimuth and

declination, with great case and to a necessary qualification in those decagation and arrangement. The illustration of the internal arrangement. It constructed was F. R. Knowles, C. E., at the Schuyler Lucctric Works, Middletown, Conn.

As yet we have no reliable data regarding the utility of the search lights of ships during naval engagements, though against the shoulds and strains incident to rough handling they have been tried and found to stand the test.

The larger was ships are equipped with a sufficient number (differing in the nature of different national of search lights to illuminate the entire circle of the horse n and so detect the ag-

proach of torpulo leute.

To diminish the concension from the firing of the guis, and in order to cover a larger area of water surface, the light should be placed as much the water line as possible. But this possition of the search light is not certain to result to the advantage of the visual using it, as the water line is the most vulnerable point of attack, and, while the beam will reveal objects at a distance of it miles, the ship from which it springs more he seen 25 miles away. But its use may, be the introduction of signals, present the confounding of friend with fee. And by the courses and closing of a shutter it will be quite points. to telegraph Morse or cipher messages with important information from vessel to vessel.

Projectors of the following dimensions and powers are now common on our war ships: 30 centimetres diameter, 3,000 candle power; 40 centimetres diameter, 20,000 candle power; 60 centimetres diameter, 35,000 candle power; 90 centimetres diameter, 40,000 candle power.

Several nations, notably the United States and Germany, have made elaborate experiments on the visibility of the search light at sea in clear, cloudy, foggy, and moonlight nights, and have tested different colors. The result obtained by the German committee was that on a clear, moonless night a white light of 1-candle power was visible for 14 mile, and 1 mile on a rainy night. The American test showed that in very clear weather a light of 1-candle power could be plainly seen at the distance of I nautical mile; 1 of 3-candle power, at 2 miles; 1 of 10-candle power, at 4 miles; 1 of 29-candle power, faintly at 5 miles; while 1 of 33-candle power was seen plainly at that remove. With green light a 106candle power was visible for only 4 miles. White light was found to be far more penetrating than any tinted light, especially through fog. Experience has demonstrated that no automatic device can take the place of a handcontrolled lamp. With automatic control two great difficulties occur which only hand control may remedy, viz., the shifting of the crater into an unfavorable position and the building up of an obtuse point on the end of the negative earbon, technically called a "mushroom," which the operator breaks off by bringing the carbons together, which no automatic control could do. Even were it possible to do this mechanically, the lengthening of the arc and probable extinction of the light would result. And vet, notwithstanding these objections, the automatic lamp has some advantages.

While, as we have seen this greatest among search lights, the Echo Mountain instrument, has a mirror 5 feet in diameter, those employed in the war ships of Germany have the standard size of 90 centimetres (about 35 inches), with a thickness of A_0^{\dagger} inch, the two surfaces being

parallel.

Metal reflectors, though as easy to construct as those of glass, are, from their rapid deterioration of luster, especially at sea, of little value. Though heretofore France and Germany have arpassed all other countries in the manufacture of class instruments, yet the success embodied in the greatest of search lights, described in this paper must aftest to the excellence of American

SERVIA, a monarchy in southeastern Europe, body is a single Chamber, called a consisting of 134 members, conversal suffrage. struction and Worship, L. Klerich; Minister of Justice, M. K. Georgievich; Minister of Agriculture and Commerce, S. Losanich; Minister of Finance, V. K. Petrovich; Minister of War, Gen. M. Paylovich.

Finances,-The budget for 1895 makes the revenue 63,755,600 dinars, or francs, of which 20,544,600 dinars are derived from direct taxation, 6,000,000 dinars from customs, 4,082,000 dinars from excise, 15,940,000 dinars from monopolies, 2,360,000 dinars from the law courts, 3,479,000 dinars from the post office, telegraphs. etc., 5,500,000 dinars from state railroads, 600,-000 dinars from school and sanitation funds, and 5.250,000 dinars from other sources. The expenditures are estimated at 63,623,868 dinars, of which 1,200,000 are the civil list, 21,691,530 dinars the interest on the debt, 120,000 dinars the expenses of the Skupshtina, 158,294 dinars the expenses of the Council of State, 226,800 dinars general expenses, 2,186,699 dinars pensions and subventions, 1,853,266 dinars the appropriation for justice, education, and worship, 1,170,526 dinars for foreign affairs, 2,482,720 dinars for the interior, 6,423,857 dinars for finances, 12,465,000 dinars for war, 4,885,055 dinars for public works, 2,980,666 dinars for agriculture and commerce. 396,571 dinars for the Board of Control, and 1,220,713 dinars for miscellaneous expenses.

The debt on July 1, 1895, amounted to 360,-

511,600 dinars.

The Army.—The active army in 1894 numbered 900 officers and 16,147 men, with 3,656 horses and 206 field guns. The army is organized in 5 divisions, and in case of mobilization 105,575 men constitute the field army, outside of which are 15,065 fortress artillery, guards, mountain artillery, sappers and miners, etc., and 27,382 depot troops and reserves, 125,516 men in the first ban, and 63,785 in the second ban, bringing up the full war strength to a total of 337,323 men.

Commerce and Production.—The exports of cattle and pigs reach 20,000,000 dinars a year; wheat and Indian corn about the same, and dried prunes in some years half as much, the product being from 20,000 to 40,000 tons. total value of the imports in 1895 was 34.881,000 dinars, of which 20,529,000 dinars came from Austria-Hungary, 3,592,000 dinars from Great Britain, 2,814,000 dinars from Germany, 2,517.-000 dinars from Turkey, 1,447,000 dinars from the United States, 1,183,000 dinars from Roumania, and smaller amounts from Russia, Italy, Switzerland, France, and Belgium. The exports were valued at 46,023,000 dinars, of which 41,116,000 dinars went to Austria-Hungary, 2,814,000 dinars to Germany, 2,517,000 dinars to Turkey, and the rest mostly to neighboring countries.

Communications.—The railroads have a total length of 336 miles. There are 1,916 miles of telegraph lines, with 4,073 miles of wire. The number of dispatches sent in 1894 was 898,535, of which 764,486 were internal, 119,192 international, and 14,857 transit dispatches. The post office carried 10,316,000 internal, 5,459,000 international, and 1,897,000 transit letters and journals. The receipts of the postal and telegraph department were 1,016,454 francs, and expenses 1,312,095 francs.

Politics and Legislation. -On Jan. 12, 1804. Ranko Taisieh, a Radical peasant leader and Deputy, Dimich Taushanovich, Radical ex-intrister, and three others were condemned to three ears' imprisonment for high treason, and ex-Deputy Czebinatz, who had confessed and made revelations implicating the others, was sentenced for two years. They were convicted of having formed a plot to seize the young King and to place Prince Peter Karageorgevich, the head of the former ruling house, upon the

The Radicals would not accept the foreible uspension of the Constitution of Jan. 2, 1889, and the stringent press laws and other repressive measures of the Christich ministry. They were unalterably opposed, furthermore, to the substitution of a centralized police for the old communal gendarmerie, Gen, Gruich and Pashich, their leaders, were supported by Ristich and many other Liberals, and even by a section of the Progressist party, headed by ex-Premier Pirotshanatz, in their demand for the convocation of a great Skupshtina for the restoration of the Constitution or its revision in a constitutional manner. They threatened to withdraw in a body from the Skupshtina, which would have been a dangerous form of protest, since 80 per cent, of the voters are adherents of the Rad-cal party, although in the new Skupshtima, eted under the pressure and intimidation of the Belgrade authorities, the Progressists had a majority, and there were a considerable number I neutrals, who were the most obedient of ex-King Milan's followers. As the Radicals had generally kept away from the polls, very few of their candidates were elected. The ministry, in which Liberals held the most important places, had therefore to meet a Chamber in which it was not sure of a majority, although it had plected the members.

The Skupshtina was summoned to an early ion on April 22, especially for the purpose of considering an arrangement for the unification of the debt that M. Petrovich had made with the syndicate of Paris, Berlin, and Vienna bankers who have negotiated all the Servian loans, The proposed conversion of 5-per-cent, bonds into a 4-per-cent, loan promised to save the treasury 7,000,000 dinars a year. Nevertheless e Finance Committee condemned, and the Skupshtina rejected the propositions of the bankers to which the Minister of Finance had greed in Paris in December, 1894. The bar-ain was to issue to these bankers, at 70, a loan of 98,000,000 dinars, which was to take the place of several smaller loans bearing the higher rate of interest, and originally issued at 75. syndicate assumed the responsibility of providing for the payment of the coupons for three years. The salt monopoly and newly established monopolies of petroleum, matches, and cigarette paper was the guarantee, the collection of these revenues to be controlled by special representatives of the bondholders. If the agreement was not ratified by the Skupshtina, the Government could not meet its immediate obligations, for the treasury accounts showed a deficit of house item dinars, and no other provision had been trade for the payment of the July coupons. But the majority of the Skupshtina thought that the

price offered for the new to be was objected even more to green to the exclusive proffer of waiting . . . debt on similar terms, and set more elle. the form of the guarantees demand on the control over the cast our atal mas give par get for the lean, deeming such foreign courte to be dangerous and dish entable for mercan in the of the Radical positionane raised the ery that the existing obligations were unfair and opposeers and that the was to bulance the tendged was to cut down the capital of the deld to the salve actually received, which would improve the eccurity to such an extent as to warrant the reduction of interest to the rate paid by the strong est governments. This scheme of regardadoes found no favor with responsible statements

d

When his scheme was rided down M Petrovich resigned on Mas 4 and hier Alexander provisionally intrusted the dire to or of the Min-

istry of Finance to M Zdrankousch.

Before the Skupshtina adjourned it confirmed all the laws that were essected or restored after the coup ditat of May 21 1894. It also saded an annual allowance of Million du are to an King Milan in recognition of his high qualities and great services to the country time of me first acts had been to revoke the decree of perpetual banishment enacted against leth ex hone Milan and Queen Natalie. Milan had paid me attention to the decree, but the Queen as they insisted on having a legal right before sinting her son or taking up her resolence again in the capital. She returned on May 10, and was greeted cuthusiastically by the populars and welcomed by the parties that had described her in her disgrace and misfortune but she referred to meet the evelesiastical digestaries who had

sanctioned her diverce, since annualled.

On May 14 Stefan Poporush was appointed.

Minister of Finance. He entered at once unto negotiations with the foreign bankers after comsulting with the leaders of all the satters and concluded in June a new figure val arrangement As the Progression would be hoper was had monionals with the Laberal ministers. M. Changtich and his colleagues on Jaja 2 tembered thirst resignations. The passed by a large majority on July 24

SLOYD. 700

When the Hungarian Government prohibited the entry of Servian pigs on sanitary grounds the Servians threatened to retaliate by breaking off commercial relations with Austria-Hungary. A modification of the regulation was secured in September, whereby pigs exported to Hungary were subjected to a week's quarantine, and those consigned to Italy were allowed to pass through to their destination.

When the Skupshtina met on Nov. 27 a bill was announced for the reform of the Constitu-tion, with the aim of securing stability. The financial difficulties were surmounted by the aid of the Russian Government, and guarantees were secured for the payment of the interest on the debt and its amortization, and for the conversion and unification of the principal loans.

SLOYD. Since 1872 the study of sloyd in the public schools of Sweden has created intense interest. The sloyd, a system of manual training in wood and metal work, is taught as an optional study in 1,500 schools there to boys of the age of ten to fourteen years. The Nääs system, arranged by Otto Salomon, director of the Nääs Normal College, has been universally adopted. This has been called the sloyd system. Its object is solely educational. The faults of the old method of teaching only theoretical subjects being recognized, the best ideas of the teachers in this field were studied, and a method was formulated which combines hand and head work in the simplest way possible.

In speaking of the sloyd system, it is necessary to avoid confounding the sloyd series of models with the system itself. The two are entirely distinct. A series of models is never more than the outward expression of an idea. Models of almost any kind could be constructed on the principles that underlie those of the Nääs series, and, though very different in form, they might have equal educational advantages, and might even be more applicable in certain instances.

The word slovd (Swedish, Slojd) is from the Icelandic, and means dexterity or skill. Old Swedish has the adjective slog (artistic or skillful). In the Low German dialect the word Klütern has a similar signification. There is in Sweden a distinct class of workmen known as sloyders, whom we would call "jacks-of-all-trades," as they are able to do various kinds of odd jobs about a house. The Swedish word Sloyd exists in other languages, but has a more restricted meaning, referring to the educational of a. In English it is synonymous with manual throng as distinct from technical and indus-. 'radning.

has for its first object to give an the paration for life by teaching branches trades and by imparting a general the hand. The Swedes set out to ". s by teaching the boys in the redements of special trades; but i that system some years ago, the boy was not old s a conticular trade he should is verificate trade he should be tang to the instruction was given.

It was no to the instruction was given. time that could be devoted oughly in the

to it at school, and, as a result, many children left the school impressed with the notion that they were competent workmen.

The second object of the sloyd is to develop the mental faculties and, at the same time, to impart positive useful information. It embraces the doctrine that educators and teachers have been preaching for a long time—that of giving a practical direction to mental activity. Man is not only born to think, but also to do. He is a creative animal; he can and must embody his ideas in form.

The third object of the slove is to make it a means of intensifying intuitions, thereby giving a clearer insight into the nature of things. Herbart desired to see instruction more concentrated-all the subjects closely interwoven the one serving to aid in the comprehension of the other-so the slovd, in combining the theo retical and practical, by teaching the elements of the arts and sciences and the method of construction and illustration, aims to excite the intuitive faculty.

Sloyd aims to cultivate dexterity in the ma nipulation of tools. This is considered one of its secondary aims. Too much stress must not be laid upon the use of tools, as the pupil is apt to lose interest in the work if he does not se full and quick result for his labor. In France at one time, the children were taught various exercises in the use of tools, and models we not made at all. In the Danish system the making of models is considered of secondary importance. Very few are made, and the only because they necessitate certain usef exercises of the tools. The use of many tool should be taught, but should serve rather as a means than an end to this instruction.

Primarily, sloyd is to be used as a means of formal education—formal, as opposed to material. A material education seeks to impart, definite knowledge of things for their own sake. A formal education seeks chiefly to develop the innate mental powers, and selects and imparts knowledge in order to strengthen character will power, memory, perception—in short, all those faculties of the mind which at birth are dormant, and which through education become characteristics of the individual.

Sloyd has for its aims, as a means of formal instruction, to instill a love for work in gener to create a respect for rough, honest, bodily labor; to develop self-reliance and independence: to train to habits of order, exactness cleanliness, and neatness; to teach habits of tention, industry, and perseverance; to promote the development of the physical powers; to train the eye to the sense of form; and to cultivate dexterity of hand. The following are the principles which have served as guides in the choice of the models:

1. All articles of luxury have been excluded. 2. The objects have a practical value; that is, they can be used.

3. The objects can be finished by the pupils them

selves without any help.

4. The objects are such that they can be made entirely of wood. This does not mean that the requisite fixings, such as screws, hangers, and hinges, may not be employed, but that the child should not be required to make these things.

5. The work is not to be polished. This refers to

o use of clear varnishes, French polish, etc.; sand-per may be used. The object is to encourage the ildren to work well, and not to think too much of

surface appearance.

As little material as possible is to be used. The sea to be enforced is that the value of the model pends not upon the material used, but upon the

s of real work expended upon it.

The pupils are to learn to work both in hard and wood. It is not wise to have them work too h in the hardest kinds of wood, as it is a great

in upon their physical strength.

Turning and carving are to be used as little as le although both may be included. Experience shown that they are not as valuable as the car-stry sloyd. The time for manual work in the tile school is of necessity limited, and to teach ing and carving for educational purposes would ire as much time as is necessary for the sloyd-ring in all cases ought to be left for the end of

The models must develop the pupils' sense of and beauty. In order to attain this object, the should include examples of form, such as ladles, and other curved objects.

The whole series must be arranged so as to

the pupils the use of all the necessary tools and now and perform the most important manipula-s connected with woodwork. Each model ought emplete the preceding ones and to teach the use one new tool or some new kind of word. The dels constitute a series only when there is a logical tion between all of them, each one being the ment as well as the complement of its prede-

In the arrangement of the models the followpoints have been kept in view:

1. The series must progress without break from the sy to the difficult, from the simple to the complex. There must be a refreshing variety both in the

The first models of the series should be of such nature that they can be executed quickly. The ska must be such that results will speedily follow, at the children by degrees will gain sufficient ence to undertake work requiring more exded time

In making the first models only a small number

s should be used.

The models must follow in a progressive order, t by means of the preceding work the pupils I have attained the necessary aptitude to make a sacceeding without any direct help from the sher, and, consequently, it will not be more difficult to make one model than another. The making he 49 previous models should render No. 50 no edifficult than No. 1 was at the outset. The models must be of such a nature that the

ild is able to make an exact copy, and not only an

oximate one.

The knife should be used as the fundamental As nearly every child knows how to use the we have hereby a means of enabling the pupil d from the known to the unknown.

Rather hard wood should be used for the first dela, as it is more difficult to work with the kuife as soft wood.

It is desirable that each pupil have a set of texts be held responsible for keeping them in good A special eupboard should be placed in the same wherein most of the tools can be put away ter school hours. Each tool should be numed according to the bench to which it belongs. e art of sharpening tools must be taught

An opinion has prevailed that the tools used the school should be smaller than these of the s, and this idea was carried out in Denmark.

as well as in France, until will . But experience shows that chiefly eleven to fourteen years are quite and using full eited tools, and even manage better in consequence thereof, eited the ven of the tool frequently assists in the downg divine work, as, for instance, in planing. Parthern or if small tools are used, the parents and the shoes dren are not apt to regard the work so real

The Nate exetern to ned emitable for children under ten years of age. In Sweden the shood is taught in the public school to laye of the age of eleven to fourteen years. The amount of time that is devoted to it is from four to six hours . week, or about one hundred and twenty for

bours a year.

It has been found heat to extend the duration of each lesson to two hours. Manual work to perhaps best taught in the middle of the morne ing, as it then serves to break the monodony of book studies, and yet the children are not tow tired to take an interest in the exercise,

The teacher is the most important factor in education. The earnest spirit of the teacher working amid poor surroundings will bring about better results than fine permises, external advantages, and expensive apparatus. The teachor must assume a great responsibility, and for this reason artisans who are not teachers should not be employed to give instruction in manual woodwork. The greatest recommendation for the artisan is his superior technical skill. The principle that must not be lost sight of is that this instruction is an educational means, and that only a skillful teacher can properly impact his knowledge and impress it upon the chalf's mind. It is necessary for the teacher to take a course in manual work and to become sufficiently acquainted with the manipulation of tools to he able not only to understand the method, but alm to make the models.

In 1870 the sloyd was first taught in some of the primary schools of Sunden Secretary of. State Carlson, who at that time was also at the head of the Ecclesiastical Department took a great interest in this subject, and to 1977 he introduced a bill in the Rikedag suggesting the adoption of a system of manual wick for the schools throughout the kingdom. As a denut consequence of his resolution, there appeared on Sept. It of that year a royal mandade in the effect that to each wheel where the sloud had been taught a yearly stipered of 75 known (621) should be pant. This was intended to moved the expense of the material to be used. At this time a grant of 1,500 krowed was published such suns to about 200 schools. The number of schools in which the slovel was taught secrement on that 1,278 schools received a substantiam in 1990.

Its 1976 a pervate mormal about nebred was established in harlstad, and in 1917 the Governo ment land a proquentions before the Rikeler to introduce the shord in all the public seminaries for teachers. At this time, as well as in 1990 (when the same question was moved by indi-valual members, the Rikulag rejected the propcents n, and it was not until 1997 that it was agreed to introduce the work in I public normal. colleges-Karlstad, Land, and Hermonand.

The Landsthing (State Assembline), the Hor hallning wallskaps Industrial and Agriculture to 702 SLOYD.

sociation), and several private persons had worked zealously for this purpose. The Board of Aldermen of Stockholm introduced the sloyd in the city schools in 1876. In Gothenburg it had been introduced on a small scale in 1872, and five years later it was taught in all the schools.

At first the work consisted in teaching the elements of the various trades. In Stockholm the transition to a regular educational manual-training system took place in 1882, and in Gothenburg in 1887. In Geffe, Norköping, Linköping, Malmö, and other towns, the educational sloyd

was taught from the outset.

At the Nääs Sloyd Normal College the method of instruction was originally worked out. Though the sloyd is not a compulsory subject, there are in Sweden nearly 1,500 schools, out of a possible 3,800, which have introduced the teaching of the Nääs system. At the Nääs College, established in 1875, up to September, 1890, 1,349 teachers (1,060 of them being Swedes) had taken courses.

In Norway the Storthing of 1866 accepted the proposition of the Government, and decided to give to every public school in which sloyd was taught the sum of 80 kroner. The sloyd is taught in 6 public normal colleges, and also at the Fredrikshåldssloyd-forenings Arbeidskole (Fredrikshåldssloyd-forenings Arbeidskole (Fredrikshåld Sloyd Association Working School). The instruction in all the schools is in wood sloyd, and the pupils who have had at least two hundred hours' instruction and have done the required amount of work receive a special mention of this fact in their diplomas. According to the new Norwegian school law, the sloyd is compulsory for boys of the age of twelve years, and optional for younger or older pupils.

By the statute of May, 1866, manual work was made obligatory for the country schools of Finland, and optional for the city schools. In all teachers seminaries some manual work is taught. In the public schools there are many woman teachers, and special courses have been arranged for them. The Finnish Hushällningssällskap encourages this work by giving yearly stipends

and distributing models and drawings.

Educational sloyd is of recent date in Denmark. In the autumn of 1885 a Danish Sloyd Union was formed, which assisted the establishment of a Teachers' Sloyd School in Copenhagen, and the introduction of this work into 10 private high schools. It is generally in the high schools that the sloyd has been carried on. In 1882 the Kjöbenhavn-Husflidsforening (Copenhagen Home Industrial Society) established a large sloyd school for the children of the Kom-

". " - kolerne (public schools).

In southers the ma-Hangary, and in Bohemia,

the movement has progressed very rapidly. The sloyd has been introduced as an elective subject in the elementary schools. In Hungary this work dates from 1870, when the Minister of Public Instruction issued an order that instruction be given in at least one of the following subjects to all the boys of the primary schools, viz., agriculture, gardening, silk cultivation, or sloyd. In 1881 manual training was made compulsory in 24 state seminaries for teachers, and in the Normal College of Buda-Pesth a three years course was introduced.

In Russia, in the State Normal College of St. Petersburg and in several other teachers' seminaries of that city, since 1884 sloyd has been taught. For lack of means the work has progressed but slowly. In the Baltic provinces much has been done to further the Swedish

system.

The local governments of several of the cantons of Switzerland have, during the past seven years, supported private efforts for establishing

sloyd courses for teachers.

About four years ago a commission of 17 gentlemen was sent by the Italian Minister of Public Instruction to study the manual-training systems of Europe, and more especially the Swedish system of sloyd instruction. Each member of this body took a course at Nääs, and since then has personally directed a class for teachers at home.

The French law of March 28, 1882, made manual training compulsory in all normal as well as public elementary schools. At that time the École Normale Speciale pour l'Enseignement du Travail Manuel (Special Teachers' Seminary for Manual-training Instruction) was established. Though this instruction has been abolished, the study of the subject is carried on

in about 100 schools of Paris.

The officers of the late Liberal Government of Belgium had begun to make arrangements to introduce the sloyd in normal and primary schools when, through the election of 1884, they were compelled to go out of office. The members of the present Clerical ministerial party expressed their views in 1887, at which time the Minister of Public Instruction said he had had the greatest sympathy with the movement, and the Government would soon take active steps in the matter. As a result courses for teachers were formed, all of which have been largely attended. Two societies have worked for its introduction in the public schools.

In England a very active propaganda in favor of the adoption of the Swedish sloyd has been going on. The most recent school laws are strongly in sympathy with the movement, and many school boards have made arrangements for the introduction of the system. A great many teachers have studied at Näis, and several many teachers have been organized by those interested in the matter. The new school law of Scotland is even stronger in its sloyd clause than the

English law.

American teachers have shown a deep interest in educational manual work, and various systems of manual training have been introduced in the school courses. In New York, Boston, San Francisco, and other cities the Swedish sloyd has been introduced in private institutions.

The Argentine Republic, Chili, and Urnguay have sent representatives to Nääs to study the sloyd, with a view to adopting it in their primary schools.

Holland, Spain, and Brazil have likewise taken

steps in this direction.

OUTH CAROLINA, a Southern State, one I the original thirteen, ratifled the Constitution May 23, 1789; area, 3,750 square miles. The population, according to each decennial census, was 249,073 in 1790; 345,591 in 1800; 415,115 in 1810: 502.741 in 1820: 581.185 in 1830: 594 398 in 1840; 668,507 in 1850; 703,708 in 1860; 705,-606 in 1870; 995,577 in 1880; and 1,151,149 in

1890. Capital, Columbia.

Government,-The following were the State officers during the year: Governor, J. Gary Evans; Lieutenant Governor, W. H. Timmer-man; Secretary of State, D. H. Tompkins; At-torney-General, William A. Barber; Treasurer, W. T. C. Bates; Comptroller, James Norton; Superintendent of Education, W. D. Mayfield: Adjutant General, J. Gary Watts; Superintendent of Agriculture, T. H. P. Allison; Railroad Commissioners, W. D. Evans, J. C. Wilson, H. R. Thomas; Dispensary Commissioner, F. M. Mix-son—all Reform Democrats; Chief Justice of the Supreme Court, Henry Melver; Associate Justices, Eugene B. Gary and Y. J. Pope, Demo-

Finances.-The balance in the treasury Oct. 31, 1894, was \$203,256,24. The receipts during the year ending Oct. 31, 1895, were \$1,971,892.20. The payments amounted to \$1,902,952,52; and the balance remaining was \$272,196.01. The principal sources of receipt were: Taxes, \$845,-08.54; dispensary, credited dispensary account, \$02,231.01; dispensary, appropriation of Desmber, 1892, refunded general account, \$50,000; phosphate royalty, \$93,308.71; privilege tax on rtilizers, \$30,135.93; loans effected under acts

The expenditures included: Education, \$225,-018.99; charitable, penal, and sanitary expenses, \$130,511.60; interest on public debt and expenses, \$269,140.05; dispensary, \$750,323,58; printing, \$19,607.52; pensions, \$51,109.70; maintaining militia, 1893-94 and 1894-95, \$20,000;

of 1893-'94, \$100,000.

election expenses, \$18,549.71: Constitutional Convention appropriation; \$3,306.62. The cash balance Dec. 31, 1895, was \$229. 972.70. The new Constitution changes the close of the fiscal year from Oct. 31 to Dec. 31. The balance against the State Oct. 31, including conbonds, balances of appropriations undrawn, de, was \$7,044,916.58. The Constitution requires \$75,000 yearly of the receipts from phoshate payments to be set apart as a cumulative sinking fund.

The taxable property in the State amounts to \$169,449,251, and the State taxes assessed against the counties to \$762,315. The total of poll taxes

is \$251,155.

Education .- During the year ending Oct 31. 1895, the number of white pupils enrolled in the free public schools was 103,729, and of colored 119,292. The total enrollment was 3,745 less than in 1894, but the total for that year was 3,616 greater than in any previous war cording to the reports of the county school commissioners, the expenditures for the year were

\$563,741.66 of which \$470,005.67 was for salatice. The east per capita ranged from \$10,11 in Charleston tompts to 85 cents in Horry, the average was \$1 ... The average length of seeshit was four at I three lestle tore the

Claffin College and Caffor Conversely have been united and operating as on cost totion for many years; but he the new to contate tion it is made necessary to equitate them. The new institution will be known as the Calored Normal Industrial Agricultural and Mechanteal College.

Charities.- The marre of the function are been has been changed to Hospital for the Innane. The total number of patients under treatment during the year was 1,157 daily acreage #25. The exet per capita was \$116.76 or about 23

cents a day.

The estimated cost of the Iwa! and It ad Asslum for 1856 was fire part 617300 for buildings for a lovel chi tree passes and for electric light plant and other expenses, #4 694

The Penitentiary. The report to the busteen months ending her SI 1 was above that at the beginning of that pers al there were 1 000 prisoners in the l'endentuary and the compact campo, the whole number in present dering the time was 1,60% and at the end of the personal there were (8,0) remaining. The devience in the non-territ processes to for to the meterious of short-term were to to the course chain gang. The approprie receipts for the femalest smooths wern \$14, 1961 (4); commated value of every on hand, \$15,000 am and due from comesed here and ther warren, \$3.262.34 making a total of \$10's Date 14. The distructures of were \$144. 431 00

Industries and Products,-Charters were period luring the test to everyosations will in aggregate capatal stock of \$1,267 Not a se-\$2.910,700 in 1994. The increase "

manufacture was very great. In 1894–5 companies for the manufacture of cotton were chartered, the capital stock amounting to \$465,000. In 1895–20 were chartered, with a total capital

of \$2,765,000,

At the beginning of the year (Sept. 1, 1894) the phosphate-mining companies had rehabilitated their plants from the effects of the cyclone of August, 1893, and they have added saving devices, so as to reduce the cost of mining to a minimum. The number of tons of rock shipped for the year ending Aug. 31, 1895, was 174,400.

The royalty paid to the State amounted to \$57,657,20. The whole number of tons mined

during the year was 201,400.

The inspector's report says: The outlook of the business is gloomy in the extreme. Prices have sunk to a figure never before reached. It is impossible to get in Enrope now even as high as 6d, a unit. The companies are unable to net more than \$2 a ton. South Carolina no longer has a monopoly of this business, deposits having been discovered in Florida, Tennessee, France, Algiers, and Venezuela.

There was a large decrease during the year in the acreage devoted to the cotton crop, and at the same time there was an immense gain in the

acreage devoted to the living crops.

There was a great increase in the tobacco acreage. The estimated yield of rice was \$50,000 bushels.

The receipts of cotton at Charleston, up to July 5, were 427,447 bales, against 405,031 at the same date in 1894.

Railroads.—The roads that were in the hands of receivers have been reorganized. The entire mileage in the State is owned or controlled by the Southern Railway, the Seaboard Air Line, and the Atlantic Coast Line. The freight charges on fertilizers were deemed too heavy, and the Railroad Commissioners fixed a rate which they considered just; but the companies obtained an injunction. The South Carolina and Georgia Railroad has become a bonded line.

The Dispensary.—The report of the State Liquor Commission for the year is thus summa-

rized:

The local dispensaries sold liquor to the value of \$1.07.0.263.95, on which the towns and counties netted a profit of \$1.05.131.28. The profits to the State itself were \$1.03.467.77 on sales to the local dispensaries amounting to \$20.055.63. The report claims an additional extraording profit for the State for the period that extraording profit for the State for the period to \$1.50.000.62. The first two sand counties on retail sales were said to toper cent, while the State's profits on tending were about 16 per cent. The total state since the dispensary system went they 1, 1806, to Dec. 31, 1805, are placed

ory war" continued in one form the year. The principal in by Judge Simonton, or not court, in reference forbuilling persons to import their they are the continued in the state of the stat

other than the dispensary agents. This decision would not destroy the law as a whole, but only that part of it which prevents the individual from carrying liquor into the State for his own use; it would set aside the authority on which the constabulary have searched private houses for contraband liquors, and therefore remove the most objectionable feature of the law.

There was also an injunction from Judge Goff forbidditty the seizure of liquor shipped into the State. As the order was disregarded, the commissioner and two constables were summoned to show why they should not be attached for contempt. In June 3 constables were sent to jail in Charleston. On the other hand, "contempt cases" were brought before the courts by the State authorities; in one case a man was sentenced by a circuit judge to eight months' imprisonment for selling liquors contrary to the order of another judge; he was also condemned to pay a fine of \$200. The case came before the Chief Justice of the Supreme Court, who discharged him without touching the constitutionality of the law, on the ground principally that the contempt proceedings were unconstitutional.

The Constitutional Convention. - The great event of the year in the State was the holding of a convention to revise the Constitution. which opened Sept. 10 and ended Dec. 4. election was called for making choice of delegates, to take place in August. The constitutionality of the registration act, passed by the Legislature of 1894, had been called in question, and was in the State Supreme Court, no decision having been rendered. In April an order was obtained from Judge Goff, of the United States circuit court, granting a temporary injunction against the supervisor of registration of Richland County, to prevent him from carrying out the provisions of the act, some of which were averred to be "burdensome and harassing to the electors, and unreasonable and unnecessary, and the same so limit, abridge, and qualify the privilege of registration that they result in a practical denial of the right to vote to those electors who, by the operation of the unconstitutional provision of the General Statutes of 1892 and Revised Statutes of 1893, are now unregistered"; and in violation of the State Constitution "in this, that they add to the qualifications of electors provided for in the said Constitution, a further qualification not therein provided, to wit, registration as required by the several sections" of the act of 1894; and it was further declared that they "undertake to add to the qualification of the electors of the State of South Carolina qualifications not prescribed by the Constitution of the United States." In brief, the understanding of the law was that it was framed for the purpose of depriving the negro of his vote. Judge Goff also issued an order to the Governor, the commissioner of elections, and others, enjoining them from any action looking to the holding of the election. The case was argued in May. Judge Goff's decision was, that the election must be held with an open ballot. There was an effort to persuade the Governor to call an extra session of the Legislature for the purpose of passing a new registration law, but he refused, and issued a proclamation, May 14, from which the following are extracts:

The restoration of white supremacy in 1876 placed a coles and in leadership of the affairs of the State and leadership of the affairs of the State and leader as United as Benator; Charles H. Simonton, chairman of Judiciary Committee and leader of the House of Successive, later district and circuit judge of the lined States Court; and John C. Sheppard, Speaker the House of Representatives, Lleutenant Governor, afterward Governor. In 1882, under the leader the House of Representatives, Lleutenant Governor, afterward Governor. In 1882, under the leader the development of these men, the Legislature passed the laws how as "the election and registration acts," developed to preserve white supremacy and a white man's rement. These laws worked admirably, and up the proceeding no complaint has ever been heard their injustice, oppression, or criminality. The name of the opposite of the state in the proceeding no complaint has ever been heard their injustice, oppression, or criminality. The name of the opposite of the part of the state in such their injustice, oppression, or criminality. The name of the opposite of the state in the state in such their injustice, oppression, or criminality. The name of the opposite of the state in such their handlwork as the palladium of our liberties, is rejoined as an enemy of his State. These who are taught to respect these nice as patriots their handlwork as the palladium of our liberties, is rejoined as an enemy of his State. These who are taught to respect these nice nice policy or institution, was overthrown, and the people in the byte of our people, and repugnant in their policy or institution, was overthrown, and the people in the byte of the negro and the carpethagger. Two has have been made to reverse this verdict of yoke of the negro and the carpethagger. Two has have been made to reverse this verdict of yoke of the negro and the carpethagger. Two has have been made to reverse this verdict of south Carolinians. There is not the supering of the state ranks of the state ranks of t

An appeal was taken to the United States out of Appeals at Richmond, which resulted in the reversal of Judge Goff's decision, June 11, the State Supreme Court the case against the was dismissed, on the ground that the court no jurisdiction, and that the complainant adequate remedy at law; but the Chief Justice of the court, holding that it had jurisdiction; going into the merits of the case, he gave as a point on that "the many provisions and restrements set forth in the registration laws as according to the right of the ballot are burname and unreasonable, and could not have intended to merely regulate the right of the strong of the law are to abridge and impede citizen in registering and voting."

There were 160 delegates to the convention, of the monly 40, as was reported, were out-and out control of the Reform, or Tilden Democracy, control of the State government. Six were

any county there etc.

It is ever durit to enset have implicing the minulast of arece of land which any alien or any conjunction controlled by aliens may own within this State.

This are required to provide by logislation for the principlement of any others, State, county, or recursional, and for his removal from office, from whom a person in his lawful country has been errors taken, through his tagligeness, permission, or county tame, by a mode or other unlawful assemblings of principles, by a mode or other unlawful assemblings of principles.

sons, and who has suffered bodily violence or death, and also to provide for the maintenance of a civil action for damages against the county in cases of lynching when death ensues, and further for an action by the county for the damages against the parties en-gagest in the lynching. There have occurred during the last year-4 cases of lynching within the State, and not one has been for the crime generally regarded as just by me such action.

It is year duty to provide a general system for the assessment of property for taxation, and this assess-ment shall be taken by all numicipalities and other sulally spens of the State as their basis for taxation. You are authorized to impose a graduated tax upon

in somes and a license on occupations and business.

The people are to be congratulated upon the liberal manner in which the Constitution has provided for the common schools of the State. The common schools are required to be separate and distinct for white and colored children, and pupils of either race are prohibited from attending the schools so set apart for the other race.

All the net income to be derived by the State from the sale of licenses for the sale of intoxicating liquors, all gifts to the State where the purpose is not desigan gits to the state where the pulpose into teach of all escheated property, the net assets or funds of all estates or copartnerships in the hands of the courts of the State where they have been no claimants for the same within the last seventy years, and the direct-tax fund are set apart as a permanent

school fund.

It is made the duty of your honorable body at your first session after the adoption of the Constitution to provide such proper and liberal legislation as will secure an annual pension to every indigent or disabled Confederate soldier and sailor of this State and of the late Confederate States who are citizens of this State, and also to the indigent widows of Confederate soldiers and sailors.

By a vote of almost 2 to 1, a provision was introduced that divorces from the bonds of matrimony should not be allowed in the State. After an exhaustive debate, a section was passed providing that "the marriage of a white person with a negro or mulatto or person who shall have any negro blood shall be unlawful and void, and the parties to such marriage, upon conviction, shall be punished as the General Assembly may prescribe."

There was a lively contest over the name to be given to a new county, "Butler" and "Saluda" being the names proposed. The petition of the pesible of the new county gave the name "Sa-lada"; but it was sought by some members of the convention to honor the family of which ex-Senator Butler is now the representative by giving its name to the county. The debate lasted for three hours, with bitter personalities on both siles, after which the county was named Saluda. the Constitution was ratified by the convention real, and will not be submitted to a vote of the

SOI TH DAKOTA, a Western State, admitted To I to at Nov. 3, 1889; area, 77,650 square . If un, according to the census of

poor town tapalal, Pierre,

Government, - The following were the State Here I Secretary of State, Thomas J. F. H. A. A. A. Kirk G. Phillips: Auditor, J. F. H. A. A. A. General, Coe. L. Crawfort. A second George A. Silsby: Su-pernated Public Instruction, Frank Crane, Composition of Labor Statistics, F.

A. Wheeler; Railroad Commissioners, G. A. Johnston, E. F. Conklin, Jay Manson; Chief Justice of the Supreme Court, Dighton Corson; Associate Justices, Alphonso G. Kellam, Howard G. Fuller; Clerk of the Supreme Court, Ivan

W. Goodner.

At the beginning of the term of office of the present State Treasurer, Jan. 9, 1895, the books showed cash on hand amounting to \$367,020,59. which amount the former Treasurer, W. W. Taylor, failed to turn over, and it appeared that he had absconded with the State's moneys, After several months' absence he voluntarily returned, and upon arraignment in the circuit court, under charge of embezzlement of public funds, pleaded guilty, and was sentenced to five years' imprisonment. On appeal to the Supreme Court, the term was reduced to two years, on the ground that the crime committed was misuse or appropriation of public funds. Before Taylor was committed to the Penitentiary in October he had made over to the State \$127,552.24 in cash and property valued at \$70,000.

One consequence of this defalcation was the appointment, by joint resolution of the Legislature, of a committee to investigate the action of Thomas H. Ruth, ex-Commissioner of School and Public Lands. The report of the committee severely criticised the ex-Commissioner of Public Lands for inattention to duty, for negleet of the statutory provisions, and for neglect of State interests in favor of his own. It charged that through his neglect the State lost a large sum of interest in 1893, and that, as the result of his failure to apportion the money as required by law in 1894, Taylor robbed the school fund of \$20,000. Accordingly, suit was brought for

\$27,000.

Finances.—By action of the Legislature of 1895 provision was made for annual instead of biennial reports from the Treasurer and the Auditor. From the report of the former, covering the period between June 30, 1894, and July 1, 1895, the following statements are gathered: On taking office the Treasurer found that the State was without funds to meet any of its obligations, and that funding warrants to the amount of \$220,000 were due Jan. 1, 1895. An extension of their time of payment for one year was secured, and, from revenues collected, \$100,000 of the warrants were paid prior to July 1, and provision will be made for the redemption of the \$120,000. To meet the immediate requirements of the State for funds, the Legislature authorized the issuing of funding or revenue warrants based upon revenues assessed but not vet collected. Of these, \$304,600 have been is sued to defray the current expenses, \$204,600 of which will become due April 1, 1896, and \$100, 000 April 1, 1897. State bonds to the amount of \$98,000, bearing interest at 4½ per cent. per annum, were also issued and sold and the proceeds applied to make good the deficiency in the school fund, occasioned by W. W. Taylor's defalcation.

The Treasurer makes his report in two parts to cover the period from July 1, 1894, to Jan. 9, 1895, when W. W. Taylor was Treasurer, and the period from Jan. 9, 1895, to June 30, 1895. At the beginning of the first period there were in the treasury \$433,026.58; the receipts were \$354,731. ; the unexpended balance, Jan. 8, 1895, was 167,020,59, which balance was the amount of Taylor's defalcation. The receipts during the second period were \$822,712,75; disbursements, \$502,222.94; balance July 1, 1895, \$320,480.81. Of this amount, \$22,746,39 was paid over by W. W. Taylor.

The indebtedness of the State July 1, 1895. was as follows : Coupon bonds, \$870,700 : registered bonds, \$267,500; funding warrants, \$424,-

500; total indebtedness, \$1,562,800.

The valuation of railroads in 1895 was \$9,193, \$47; of telegraphs, \$127,116; of telephones, \$34,750; express companies, \$51,500; sleepingcar companies; \$12,000, making a total of \$9. The valuations of lands was \$74.918,-478; of town lots, \$16,863,655; of personal property, \$20,550,405. The total valuation in 1805 was \$121,751,151.

The amount of taxes paid by insurance comanies direct to the State was \$5,456.86, making e total receipts from insurance companies \$24,657.92, against \$27,583,60 for 1894. orts filed in 1895 give the ratio of losses paid

to premiums received as 53°2 per cent.

The appropriations from the general fund made during the year amounted to \$746,160.77; warrants issued, \$718,923.86; unexpended bulance July 1, 1895, \$27,236.91. Appropriations from the interest and income fund were \$30%. 1; warrants issued, \$308,273.47; unexpended balance, \$709.53.

Education .- The regents have eight institutions under their charge: The State University, at Vermillion; Agricultural College, at Brook-ings; United States experiment station, at Brookings; State School of Mines, at Rapid City; State normal schools, at Spearfish, Madison, and Springfield; and the State Geological Survey. The State appropriates for their support about \$60,000 annually, and the United States \$16,000.

The fiscal year of all now ends June 30. The carollment at the university Dec. I was 224; at the Agricultural College, 250; the Spearfish and Madison normal schools had about 170 students each, and were crowded. The Springfield normal has no other existence than that involved in a "location" by an old-time Legislature, an assignment of 40,000 acres of public lands by the last Legislature, and a board of 5 trustees, Railroads.—The Railroad Commissioner in

December furnished the following figures: The number of railroad companies doing business in e State is 14, with a total mileage of 2,860; the number of men employed in the State is 3.046; total compensation for the year, \$2,950,507; people killed during the year, 8; people injured, 49; number of elevators and warehouses doing business, 657. About 20 new elevators and warehouses have been erected in the castern part of the State.

Vankton Reservation .- The lands cedes for the Yankton Sioux Indians, being 165 (BR) Acres in a rich farming country in the southern part of the State, were in April opened to atte ment. An attempt was made by the State to take possession of a large part of the se lands for the normal schools and other institutions, under

a general interesental and of March 2 1985. which in terries permits water to severe seduced lateds from the surplus of sorrendered ladian reservations. In the case of the Yankton reservation there was a special charteness be Comgrown, dated Aug 15, 1004 who he per coled for the disposal of the refuse and what knower stead and town site laws. In an argument terfore the Secretary of the later of war cancluded that the general law of 1005 out and see and the special treats confirming to d 1904. and a deviction to that effect was remisered

Legislative Session. The Legislature and on Jan. 8, and sat until March a The savenue laws were mulified and the range at laws were amended to strengthen the bands of the Rail was Commissioners and there was now salmable trigation and artestamwell legenders but me radical changes in general laws were made, law was charted principling for checking the accounts of the State Treasurer by the to restreet each month. Other laws personal for the edgapitation of county mutual i surance compatitice. nance, Amos Salvador; Minister of the Interior, A. Aguilera; Minister of Agriculture, Commerce, and Public Works, M. Groizard; Minister of the Colonies, Señor Becerra. M. Groizard was afterward succeeded by J. L. Puigeerver, and when Señor Moret resigned he took the portfolio of Foreign Affairs. Señor Maura became Minister of Justice when Señor Salvador retired and Señor Capdepon became Minister of Finance. Señor Becerra retired from the Ministry of the Colonies, being succeeded by Señor Abarzuza.

Spain has an area of 197,670 square miles, with a population at the last census (1887) of 17,565,632. The net emigration in 1892 was 8,258, mostly directed to Brazil, the Argentine

Republic, and Uruguay.

Finances.-The budget for the financial year 1894-'95 estimates the revenue at 744,726,353 pesetas, or francs, of which 291,423,473 pesetas are the product of direct taxes on land, mines, Government salaries, registration, etc.; 281,-763,000 pesetas are raised by customs and internal-revenue taxes; 129,940,000 pesetas are derived from stamps and Government monopolies; 22,124,880 pesetas are the receipts from national property; and 19,470,000 pesetas come from the public treasury. The expenses are estimated as follow: Civil list, 9,500,000 pesetas; Legislature, 1,526,585; public debt, 309,219,669; indemnities and pensions, 55,067,477; judiciary, 1,817,231; presidency of the Council of Ministers, 891,050; Ministry of Foreign Affairs, 4,709,-142: Ministry of Grace and Justice, 52,690,584; Ministry of War, 138,872,216; Ministry of Ma-rine, 22,502,951; Ministry of Public Works and Public Instruction, 76,979,883; Ministry of the Interior, 26,924,554; Ministry of Finance, 14,-886,368; expenses of collection, 27,377,183; Fernando Po, 655,000 pesetas; total revenue, 738,-619,893 pesetas.

For 1895-'96 the revenue was estimated in the budget at 758,500,000 pesetas and expenditure

at 765,500,000 pesetas.

The public debt on Jan. 1, 1893, amounted to 5,962,043,090 pesetas, made up as follows: Perpetual external debt, paying 4 per cent, interest, 1,971,157,000 pesetas; perpetual internal debt, paying 4 per cent., 2,274,660,450 pesetas; amortizable debt, paying 4 per cent., 1,714,075,000 pesetas; due on public works, 562,000 pesetas; due on public roads, 252,000 pesetas; arrears due to employees, 1,342,640 pesetas. There are, besides, a debt of 3,000,000 pesetas owed to the largest States debts in favor of corporations at the elergy amounting to 725,836,000 pesetas a fleating debt of 195,516,000 pesetas, and

The G vernment raised money in Spain for Cost expedition, depositing Cuban bonds by Adam in October made an arrange-least Pays and Dutch bankers for a loan cost of 75,000,000 frames.

Commerce.—The value of the commerce in 1893 with the different foreign countries is given, in pesetas, in the following table:

COUNTRIES, Imports.	Exports.
France	205,700,000
Great Britain	151,700,000
America	194,900,000
Portugal 20,000,000	80,200,000
Beigium 28,000,000	14,500,000
Germany	14,500,000
Russia 82,800,000	
Sweden and Norway 25,430,600	2,400,000
Philippine Islands	22,700,000
Northern Africa 28,100,000	5,600,000
Italy 16,500,000	8,100,000
Netherlands 5,500,000	12,300,000
Turkey 18,200,000	
Other countries 84,100,000	17,100,000
Total commerce	709,700,000

Some of the imports and their values were: Breadstuffs, 79,547,000; cotton, 76,075,000; coal, 49,420,000; timber, 36,740,000; tobaeco, 34,532,000; codfish, 24,864,000; machinery, 20,377,000; chemicals, 18,597,000; iron, 17,782,000; ships, 16,927,000; hides and skins, 15,912,000; coffee, 14,668,000; cacao, 13,969,000; wool, 13,946,000; sugar, 12,979,000; linen yarn, 11,638,000; silks, 10,593,000; woolens, 10,287,000; raw silk, 8,931,000; petroleum, 8,307,000 pesetas. The values of the principal exports were: Wine, 94,873,000; lead, 54,942,000; cottons, 48,780,000; copper, 45,560,000; iron, 43,066,000; olive oil, 27,845,000; boots and shoes, 26,310,000; cork, 23,161,000; raisins, 16,394,000; oranges, 14,627,000; wool, 12,298,000; animals, 10,616,000; almonds, 10,358,000; gricksilver, 8,724,000; grapes, 8,082,000; skins, 8,015,000 pesetas.

Navigation.—During 1893 there were 6,148 Spanish steamers, of 5,304,174 tons; 6,786 foreign steamers, of 5,671,495 tons; 1,892 Spanish sailing vessels, of 171,095 tons; and 1,373 foreign sailing vessels, of 303,434 tons, entered at Spanish ports; in all 16,199 vessels engaged in foreign commerce, of the aggregate burden of 11,450,198 tons. The total number cleared was 16,089, and the total tonnage 11,414,057 tons.

The merchant navy on Jan. 1, 1893, comprised 1,233 sailing vessels, of 196,650 tons, and

474 steamers, of 652,139 tons.

The Army.-The law of 1885 made military service obligatory for twelve years from the age of nineteen, of which period three years of service with the active army are legally required. Exemption can be bought for 1,500 pesetas, and substitution is allowed between brothers. annual contingent, which has been 49,000, was to be increased by the operation of the law of 1891 to 80,000 men. The peace effective for 1895 was returned as follows: General officers. 240; general staff, 232 officers; infantry, 6,088 officers and 45.679 men; cavalry, 1,360 officers and 13,139 men; artillery, 963 officers and 8,386 men; engineers, 425 officers and 3,399 men; telegraph brigade, 7 officers and 226 men; total, 9,315 officers and 70,829 men, with 14,655 horses and mules and 396 guns. The war strength was 176,035 men, with 14,250 horses and mules and 590 guns. The army bill of 1894 provided for the maintenance of 82,000 troops in Spain, 13,000 in Cuba, 11,000 in the Philippines, and 7,000 in Puerto Rico. The ministers on Oct. 17, 1805, calculated on a present effective of 85,000, of whom 24,000 were for the colonies.

The Navy. - The naval force consists of 1 Arst-class battle ship (" Pelayo"), of 9,800 totie, protected with 18 inches of armor and armed th 2 124-inch, 2 11-inch, and 19 smaller guns; 6 belted cruisers (" Infanta Maria Teresa," " Viz. caya," " Almirante Oquendo," " Cataluña," " (ar. denal Cisneros," and "Princesa de Astorias"), each having a displacement of 7,000 tons and a med of about 20 knots and armed with 2 11. inch guns and 5 54-inch guns; I armored cruiser "Emperador Carlos"), of 9,235 tons displacement and a larger light armament than the above: 2 deck-protected emisers ("Alfonso XIII" and "Lepanto"), 2 frigates, 41 small cruisers and gunboats, 5 torpedo gunboats, 1 torpedo catcher, 14 sloop gunboats, and 12 firstss, 20 second-class, and 1 third-class torpedo coats. The new cruisers, built in England and atterly in Spain, compare favorably with the ame classes of vessels in any navy either in ed, cruising radius, or the completeness and distribution of the armament. The navy sustained a severe loss in March, 1895, when one of the new deck-protected cruisers, the "Reina Regente," foundered near the entrance of the Strait of Gibraltar with 400 men on board. She was a sister ship to the "Alfonso XIII," having a displacement of 4,800 tons, a primary armaent of 4 7.8-inch guns, with 15 smaller guns and 5 torpedo tubes, capable of steaming 2016 knots hour. A smaller cruiser, the "Cristobal Colon," was shipwrecked in October, and a sloop gunboat, the "Sanchez Barcaiztegui," was also st in Cuban waters. The Government has acquired 19 small gunboats for the purpose of patroling the coasts of Cuba.

Politics and Legislation, -A political crisis was brought on by a riotous attack make by military officers on newspaper offices in the middle of March. The "Resumen," a Republican sheet, in an article on the Cuban insurrection, charged the junior officers of the army, who were always er to go to Cuba when there was no danger, with seeking to escape from being drafted to Cuba to fight the insurgents. Resenting this imputation of cowardice, a party of 35 young officers wrecked the office of the newspaper on March 14. On the following evening 60 officers, with a crowd of sympathizers, sacked the office of the "Globo," which had protested against those lawless doings, and wounded an editor and two assistants. Later they attacked the office of the "Heraldo," but could not force an entrance. The officers, whose number had in-creased to 400, then attempted to renew their altack upon the staff of the "Resumen," desisted when the captain general begged them to disperse. On the following day the disturbance was discussed by the Cabinet and the Congress. The newspaper editors of Madrid met ad resolved to notify the Government that they would suspend the publication of all the newspapers unless they received guarantees of the safety of their lives and property, tien Lopez Dominguez exonerated the riotous officers, and demanded that the offending news-paper editors should be tried by court-martial remier Sagasta and the other ministers would not assent because, while press offenses against

The

Ministerialists did not vote, and the Cabinet would not resign, having accepted office on the promise of Señor Sagasta that the Liberals would support them in passing the budget. Gen. Primo Rivera, the new Captain General of Madrid, was shot on June 3 by Capt. Primitivo Chavijo, an infantry officer who had a grudge against him. A proposal to abolish the export duty on wheat was defeated in the Chamber on June 24.

On Sept. 5 Señor Castellano, Minister of the Colonies, offered his resignation because Romero Robledo, who exercised an undue influence in domestic affairs, attempted to impose his will also in colonial affairs and inaugurate a policy

of extermination in Cuba.

The Colonies.—The colonial possessions of Spain are Cuba and Puerto Rico in the West Indies, with an area of 45,205 square miles and 2,438,395 inhabitants (see Cuba): the Philippine Islands and their dependencies in the Sulu Archipelago, including the Caroline Islands, Palaos, and the Marianne Islands, having a total area of 116,256 square miles and 7,121,172 inhabitants; and the island of Fernando Po, with its dependencies of Annoboni and Corisco, Elobey, and San Juan in Africa, having a total area of 783 square miles and 36,000 inhabitants. Spain claims a protectorate over Rio de Oro and the Adrar territory in northern Africa, which have ar extent of 243,000 square miles and 100,000 people.

The budget of the Philippines for 1895 shows a revenue of \$2,715,980 sterling, derived from direct and indirect taxation, a lottery, railroads, etc., and an expenditure of £2,650,026. The imports in 1893 were valued at \$24,000,000 and exports at \$30,500,000. The regular force maintained in Cuba is 19,571 men, which was increased during 1895 by an expeditionary force and the enlistment of guerrillas to 90,000 men. In Puerto Rico 187 officers and 3,200 men form the garrison; in the Philippines, 573 officers and 9,300 men. Besides the insurrection in Cuba the Spanish Government had to deal in 1895 with disturbances in the Philippine Islands. In an encounter with Mohammedan Malays in Mindanao on March 10 the Spanish killed 108, including the rebellious sultan, and lost 17 killed and 193 wounded. In July a Spanish force was ambushed in the northern part of Luzon by the natives who suddenly rose in revolt. They were subdued later by a column sent from Manilla under Gen. Rm, who captured their fortified town, killing 116 and being 17 killed and the same number wounded. In September there was fighting on the small island of Tatan between the crew of a Sacreb 2 inboat and some native soldiers, who Transfer one and taken to Manilla, where they state is it by eart-martial and shot. The Spanat 1 States minister that the American permitted to return to the Caroto be some their labors.

ing King is Oscar II, born Jan. 21, 1829, who succeeded Carl XV, his brother, Sept. 18, 1872,

Sweden.—The legislative power is vested in the Riksdag, consisting of two houses. The First Chamber has 150 members, elected by the provincial and municipal bodies for nine years. The Second Chamber consists of 230 members, of whom 80 are elected in the towns by direct suffrage and 150 in the rural districts, part by direct and part by indirect suffrage. To have a vote a Swede must own land worth 1,000 kronor or farm land of the taxed value of 6,000 kronor, or pay taxes on an income of 800 kronor (1 krona = 27½ cents).

The ministry in the beginning of 1895 was composed as follows: Minister of State, Erik Gustaf Boström: Minister of Foreign Affairs, Count Carl Lewenhaupt; Minister of Justice, August Östergren: Minister of the Interior, Victor Lennart Groll; Minister of Finance, Baron Fredrik von Essen; Minister of Education and Ecclesiastical Affairs, Gustaf Fredrik Gilljam; Minister of War, Baron A. E. Rappe; Minister of Marine, Jarl C. E. Christerson; Councilors of State, Baron Albert Lars Evert Akerhielm and Sven Herman Wikblad.

Finances.-The revenue is estimated in the budget for 1896 at 100,534,000 kronor, of which 19,070,000 kronor are classed as ordinary receipts, 674,000 kronor are surplus receipts of preceding years, 2,340,000 kronor are profits of the state bank for 1894, and 78,450,000 kronor are what are called extraordinary receipts. Of the ordinary receipts, 2,155,000 kronor are land taxes, 1,400,000 tonnage dues, 2,400,000 rent for domains, 665,000 poll tax, 7,200,000 net receipts of railroads, 1,335,000 receipts of telegraphs, 2,990,000 produce of forests, and 1,015,000 miscellaneous. Of the extraordinary receipts, 36,-000,000 kronor come from customs, 8,500,000 from posts, 5,300,000 from stamps, 14,500,000 from the tax on spirits, 7,000,000 from the duty on beet sugar, 6,350,000 from the income tax, and 800,000 from various sources. The total expenditures are made to balance the receipts. Of 77,462,524 kronor of ordinary expenditure, 1,320,000 kronor are for the royal household, 3,812,550 for justice, 606,750 for foreign relations, 25,552,870 for the army, 6,996,300 for the navy, 5,596,406 for the interior, 13,026,508 for education and worship, 3,116,040 for pensions, and 17,435,100 for financial administration. this last sum, 2,593,000 kronor are required for collecting the customs duties, 450,000 for the control of the excise, 8,155,000 for the post office, 1.335,000 for telegraphs, 1,147,000 for forests, and 3,755,100 for other expenses. The extraordinary expenditures are 11,464,076 kronor, of which 4,414,700 kronor are for the army and navy and 7,049,286 for other purposes; the expenses of the debt, 10,207,400 kronor; reserve for the insurance of workingmen against disability, 1,400,000 kronor.

The public debt, contracted almost exclusively for the construction of railroads, amounted in 1895 to 293,151,387 kronor, paying from 3 to 4 per cent. interest. In January, 1895, the Government negotiated with Swedish, French, German, and English bankers for the conversion of the 4-per-cent. bonds, amounting to 29,000,000 kronor, into a new loan paying 3½ per cent.

Commerce.-The total value of the interest in 1893, inclusive of specie, was 332,689,000 kronor, and of exports 328,272,000 kronor. principal imports and their values were: Rve and wheat, 28,287,000; coffee, 27,012,000; coal, 25.645,000; woolens, 20,003,000; fron goods, 12,-047,000; cottons, 11,281,000; raw cotton, 9,616, 000; sugar, 9,552,000; hides and skins, 8,852. 000; fish, 7,948,000; machinery, 7,134,000; tobacco, 7,075,000; petroleum, 6,783,000; woulen yarn, 5,765,000; paper, 4,448,000; wood manufactures, 4,338,000; vegetable oils, 4,188,000; wool, 4,065,000; pork, 3,478,000; iron, 3,337,000 kronor. The principal exports were: Timber, 113,431,000; butter, 40,159,000; iron, 31,918,-000; paper, 25,444,000; oats, 21,176,000; wood pulp, 10,920,000; fish, 9,887,000; matches, 7,858,-000; cotton goods, 4,759,000; glass, 3,723,000; machinery, 3,603,000; animals, 3,359,000 kronor.

The commerce with the different foreign countries in 1893 is shown in the following table,

which gives the values in kronor:

The Council of State was composed in the beginning of 1895 as follows: Munister of State, Emil Stang; Education and Worship, Dr. Anton C. Bang; Justice, Ernst Motzfeldt; Interior, Peder Birch-Reichenwald; Public Works, Peder Nilsen; Finance and Custons, Ole Andreas Furu; Defense, Johannes Vinding Harbitz. The delegation at Stockholm consisted of Gregers W. W. Gram, Munister of State, with Dr. George Francis Hagerup and Lieut,-Col. Christian W. E. B.

Olssin as associates.

Finances.-The revenue for the year ending June 30, 1894, was 53,624,900 kroner, including 577,800 kroner locally subscribed for railroad construction. Of the ordinary receipts, 21,021,-900 kroner came from customs, 2,639,200 from direct taxation, 3,975,800 from the impost on spirits, 2,217,200 from the malt tax, 650,400 from the stamp duty on playing cards, 995,600 from judicial fees, 558,600 from the succession tax, 793,400 from domains and forests, 476,600 from mines, 1,636,800 from active capital, 3,290,200 from the post office, 1,297,200 from telegraphs, 7,727,900 from railroads, 1,778,200 from educational fees, 255,000 from prisons, 949,100 from hospitals, and 2,784,000 from miscellaneous sources. The expenditures amounted to 52,459,-300 kroner, including 930,800 kroner for the construction of railroads. Of the ordinary expenditures, 352,700 kroner went for the civil list and appanages, 590,400 for the expenses of the Storthing, 1,287,500 for the Council of State, 5,889,800 for education and worship, 5,560,000 for justice, police, and sanitary service, 7,674,-890 for the interior, 9,906,499 for public works, 8.785,100 for financial expenses and the debt. 7,964,400 for the army, 3,644,500 for the mayy, 642,300 for foreign relations, and 161,300 for accidental expenses.

The debt, which was contracted for productive public works, amounted on June 30, 1894, to 163,934,800 kroner, paying mostly 3 or 3½ per cent, interest. The railroads, active capital, and other assets of the Government were valued

at 146,465,100 kroner.

Communications,-The railroads in 1894 had

a total length of 1,055 miles.

The post office in 1894 carried 25,158,709 internal and 9,084,300 international letters and 36,075,100 internal and 4,384,100 international printed inclosures; the receipts were 3,409,477,

atti expenses 3,486,993 kroner.

The Government telegraph lines in 1894 had a total length of 5,137 miles, with 10,291 miles a total length of 5,137 miles, with 10,291 miles a total engage of the same of the railread telegraphs a length of the railread dispatches in 1894 was 1,100,330 miles of internal dispatches, 596,184; services of the railread dispatches, 596,184; services 11,163; receipts, 1,333,338 kround and the railread dispatches, 596,184; services 16,29,351 kround.

 were: Animals and animal products, 45,300,000; timber, 28,000,000; wood manufactures, 18,400,000; skins and leather, 7,000,000; oils, 6,800,000; tissues, 5,700,000 kroner. The foreign commerce was distributed in 1894 as follows, values being given in kroner:

COUNTRIES. Imports.	Exporta.
Great Britain 57,546,000	45,420,000
Germany 56,294,000	15,226,000
Sweden 29,433,000	21,223,000

Denmark	4,435,000
France	7,865,000
Holiand 8,122,000	6,470,000
Belgium 7,942,000	4,451,000
Spain	12,678,000
Portugal 681,000	1,804,000
Italy 1,480,000	8,738,000
United States 8,926,000	1,185,000
Other countries 2,527,000	8,560,000
Total. 205,990,000	181,995,000

Navigation.—There were entered in 1893 at the ports of Norway 6,209 Norwegian vessels, of 1,876,195 tons, and 5,342 foreign vessels, of 970,753 tons; and there were cleared 6,383 Norwegian vessels, of 1,991,640 tons, and 5,316 foreign vessels, of 966,792 tons. The total number entered was 11,551, of 2,846,948 tons, of which 5,639, of 1,792,328 tons, were with cargoes; of the total number of 11,699, of 2,958,482 tons, that were cleared, 10,239, of 2,361,502 tons, carried cargoes.

The merchant marine on Jan. 1, 1894, numbered 6,702 sailing vessels, of 1,452,276 registered tons, and 811 steamers, of 237,135 tons.

The Army and Navy .- Military service wat declared obligatory by the law of 1885 from the age of twenty-three for five years in the active army, but actual service with the colors is confined to a course of instruction, lasting in the first year seventy days for cavalry and field artillery, fifty days for engineers, forty-two days for infantry, mountain, and fortress artillery, and sanitary troops, and eighteen days for the train, followed by twelve days of exercises with the first classes of the Landwehr. The artillery, cavalry, and engineers are called out for twentyfour days of exercises in the next three successive years, and the other troops for two years only. The peace effective of the active army is about 1,700 officers and instructors and 18,000 men: for war it can be doubled by drafts from the Landwehr.

The naval force consists of 4 ironelad monitors, 1 corvette, 3 first-class, 12 second-class, and 16 third-class gunboats, and 11 first-class and 2 second-class torpedo boats. There are being built 2 armored-turret ships, 1 first-class gunboat, 1 torpedo cruiser, and 7 torpedo boats. The personnel of the navy consists of 97 officers, 30 cadets, and 454 sailors and employees.

The Conflict with Sweden.—Just before the assembling of the newly elected Storthing the King transferred his residence to Christiania. The Conservative ministers who had carried on the administrative business for nearly two years without a majority placed their resignations in his hands. The Swedish Government was inclined to accede to the establishment of a separate Norwegian consular service, as already enacted by the Storthing, but only on condition

that the common diplomacy should be preserved. King Oscar offered to the Radical Left the option forming a ministry upon the understanding that the consular question should be submitted to the joint Council of State after negotia-tions with Sweden regarding the dissolution of the existing consular system and the question of foreign relations. Two years before he had ruled that the breaking up of the joint consular independently, as a matter of purely internal collics. The Left declined to enter into negotiations with Sweden until they could be conthe Storthing. The Storthing was called to an extraordinary session on Feb. 1, and on Feb. 19 passed into the ordinary session. No solution of the political crisis having been reached, the Stang ministry remained provisionally in office. The introduction of compulsory military service In the northern provinces and the expenditure of large additional sums for the completion of the military defenses were proposed in the speech from the throne. To balance the inrease in the national expenditure a stamp tax as declared to be necessary. Having failed o come to an agreement with the Radical caders, the King, on Feb. 27, requested the Conservative ministers to withdraw their resignations, and when they declined he requested Jacob Sverdrup, of the Moderate Left, to form ministry, but he refused to accept the mission. Ex-Minister Thorne likewise refused. The King favored the reorganization of the Ministry of Foreign Affairs on a strictly common basis, with a minister who may be either a Swede or a Norwegian and who shall be responsible to a joint delegation of the Riksdag and the Storthing. The Stang ministry was induced to continue in office after the failure, in the becinning of April, of Herr Michelet, a member of Right, to obtain the co-operation of the Radicals in a coalition Ministry of Affairs. The Swedish Riksdag threatened to abrogate the commercial treaty with Norway, and the Ex-reme Radicals became more violent as the adlock continued. The temperate men of the party saw the prospect of an acceptable revision of the act of union improved by the intervention of the King. On June 7 the Storthing reolved to enter into negotiations with Sweden by a vote of 90 against 24. The King called on the Radical leader Engelhart, the mover of the resolution, to form a Cabinet representing the majority. Herr Engelhart, however, delined to undertake the task unless he were allowed to select his colleagues not only from ong the 35 Radicals who voted for his motion, but also from among the Extreme Radicals who ad opposed it. On June 17 King Oscar asked acob Bonnevic, a Conservative ex-minister, to rm a compromise ministry, but he also failed. The diplomatic and consular appropriations re voted by the Storthing in the latter part of with conditions appended that the Swedch Government declined to accept. The civil st, which the Storthing reduced in 1834 from 1,000 to 256,000 kroner, and the allowance to the Crown Prince, which was cut down from 0,000 to 30,000 korner, were restored on the mand of the King, who contended that it was

a violation of the treat rotal allowance. the July 21 1 ... tempted to form a condition of all of success. On July 25 the Morthing a relie to 000 kroner for 2 trouclade and 4 tables and a confor 3 torpedo heats and the remedered and armament of the 4 mountage alreads processed by Norway. Negotiations were targun tetween the Swedish and Norwegian governments and presented while the extremists of both much tries exchanged threats of war. The fahinet crisis did not end before the 14, when a conlition Cabinet was formed, made up as follows Minister of State, Dr. G. F. Hagerup, who took charge of the Department of Justice and Police; Minister of Public Worship and Education, Dr. Jacob L. R. Svendrap; Minister of the Interior, T. de W. Engelhart; Minister of Public Works, P. Nilsen; Minister of Punance and Customs, R. Kildal; Minister of National Defense, Licut. Col. C. W. E. B. Olesda; Secretary of the Department of Revision, P. Stang-Lund; Delegation at Stockholm, G. W. W. Gram, Minister, and E. M. Hangland and H. Smedal, Councilors of State. A joint commission was appointed by the two governments in November to discover an amerable solution of the difficulties connected with the amion, Of the Norwegian commissioners, I were taken from the Right, 3 belonged to the Left, and 1 was a Moderate.

SWITZERLAND, a feeberal regoublic an run. tral Europe, consisting of 27 cantons or inde-pendent half cantons. The Federal Assembly is composed of the Nationalrath, committing of 147 members elected for three years by direct universal suffrage, and the Standerath, contain ing 2 members from each canton or had equation. The executive authority to exercised by the Bundesrath, consisting of 7 members chosen by the Federal Assembly, one of whom is should annually in December to serve as President of the Federation for the coming year, and another to serve as Vice-President. The Federal Comto serve as Vice-President. The Federal Cons-cil in 1805 was composed as follows: President, J. Zemp, of Luzern, Chief of the Department of Posts and Kailroads; Vice President, A Lautes nal, of Geneva, Chief of the Department of Foreign Affairs and Commerce Charl of the Department of Military Affairs, Emil Pres. Basel-Land; Chief of the Department of June tice and Police, Lieut ded A ren Wattens wyl, of Born , t hief of the Department of the Interior, E. Ruffs, of Vanel, Chief of the Department of Industry and Agraculture A Dequi cher, of Thurgan, Chref of the Department of Finance and Custome, W. Hauser, of Traviele, A. Lachenal was elected President and A. Dencher Vice-President for 1866 on Dac, 12, 1864.

Area and Population.—The area of Switzerland is 15,916 square miles. The population in June, 1804, was estimated to be 2,394,848. The number of marriages in 1804 was \$2,572; of births, \$7,478; of deaths, \$5,517; excess of births, \$1,961. The cuts of Zurisch in the middle of 1895 had 134,540 inhabitants; Genera, 95-111; Rasel, 78,960; Bern, 48,828.

Finances.—The Fesheral revenue in 1894 was \$4,047,312 france, of which 41,280,081 came from customs, 5,854,184 from the mint, 180,361 from bank notes, 428,381 from real property. Cl

283 from invested capital, 25,726,178 from posts, 6.019,352 from telegraphs and telephones, 179,-045 from railroads, 2,353,122 from military arsenals, 47,377 from the general administration, 330,058 from the political department, 6,888 from justice and police, 174,601 from industry and agriculture, and 21,576 from other sources. The total expenditures were 83,675,812 francs. of which 4,013,267 francs were for interest and sinking fund of the debt, 1,038,020 for the general administration, 955,693 for the political de-partment, 9,633,476 for the Interior Department, 153,806 for justice and police, 24,780,828 for the Military Department, 9,984,187 for finance and customs, 3,161,946 for industry and agriculture, 29,901,138 for posts and railroads, and 52,651 for unforeseen expenses.

The debt of the Federation is 85,203,586 francs; the active assets are 156,326,189 francs.

Commerce.—The special commerce with foreign countries in 1894 is shown in the following table, the values being given in francs:

COUNTRIES.	Imports.	Exports.
Germany	242,85,000	157,110,000
France,	110,252,000	78,044,000
Italy.	143,524,000	87,938,000
Austria-Hungary	80,256,000	89,843,000
Great Britain	43,140,000	117,580,000
Netherlands	8,025,000	4,142,000
Belgium	23,085,000	11,581,000
Spain	11,236,000	11,702,000

The imports of coin and bullion, which are not included in the above statement, amounted to 54,962,000 francs, and the exports to 51,805,-000 francs. The values, in francs, of the principal imports were: Silk, 102,400,000; grain and flour, 80,000,000; animals, 71,700,000; coal, 38,-300,000; woolens, 37,500,000; chemicals, 28,-500,000; cotton, 27,200,000; iron, 27,100,000; wine, 23,400,000; machines and vehicles, 21,-300,000; sugar, 19,200,000; cotton goods, 18,-800,000; iron goods, 16,800,000; coffee, 16,600.-000; timber, 14,600,000; barley, malt, and hops, 11,700,000; leather, 11,100,000; wool, 9,300,000; books, etc., 9,200,000; tobacco, 9,000,000; silks, 8,900,000. The values of the principal exports, in francs, were: Silks, 118,900,000; cottons, 102,800,000; watches, 85,900,000; cheese, 37,700,000; raw silk, 34,800,000; silk yarn, 29,800,000; chiese, distributed of 20,000,000; cheese, 37,000,000; chiese, 30,000,000; cheese, 37,000,000; chiese, 30,000,000; cheese, 37,000,000; chiese, 30,000,000; cheese, 37,000,000; chiese, 30,000,000; cheese, 37,000,000; cheese, 000; machines and vehicles, 26,700,000; chemicals, 21,300,000; milk, 19,600,000; cotton yarn, 19,300,000; animals, 15,600,000; woolen yarn, 8,700,000; straw goods, 8,400,000. A new commercial treaty with France, terminating the war of tariffs, went into force on Ang. 19, 1895.

Communications.—Switzerland had 2,220 miles of railroads on Jan. 1, 1894. The post office in 1894 carried 76,985,000 internal and 32,044,000 international letters, 15,206,000 internal and 9,109,000 international postal cards, and 24,860,000 internal and 18,445,000 international circulars and book packets, and transmitted 3,906,000 internal postal orders for 424,949,000 francs and 778,000 international ones for 35,689,000 francs. The state telegraph lines in 1894 had a total length of 4,515 miles, with 12,258 miles of wire. The number of messages sent was 3,780,698, of which 1,818,827 were internal, 1,301,376 international, 526,537 in transcripts.

sit, and 133,958 official,

T

TENNESSEE, a Southern State, admitted to the Union June 1, 1796. The population, according to each decennial census since admission, was 105,602 in 1800; 261,727 in 1810; 422,771 in 1820; 681,904 in 1830; 829,210 in 1840; 1,002,717 in 1850; 1,109,801 in 1860; 1,258,520 in 1870; 1,542,359 in 1880; and 1,767,518 in 1850. Capital, Nashville,

Government,—The following were the State during the year: Governor, Peter Tursel Democrat; Secretary of State, William S. T. Treasurer, Edward B. Craig; Complemes A. Harris; Attorney-General, G. Adjutant General, John A. Fite, such as by Charles Sykes; Superintendent Leation, Frank M. Smith, succeeded with Commissioner of Agricultud Mines, T. F. P. Allison; The F. P. Clute; State General Mines, T. F. P. Clute; State General State Ge

Finances. The state of taxable property in the state of taxable property in the state of 18.6 was \$416,061,613,

The value of town lots was placed at \$111,906,

The legislative committee appointed to examine the treasury accounts reported that the actual floating debt of the State Dec. 20, 1894, was \$7,275.86. The report said further: "We find that Comptroller Harris did, on May 2, 1894, call in the entire amount of outstanding 5s and 6s, aggregating \$1,011,900, which caused all further interest on this amount to cease after July 1, 1894, thereby resulting in a great saving to the State, the Comptroller estimating that the \$1,011,900 could easily be paid out of the proceeds of the sale of the \$1,000,000 redemption bonds and the remainder could readily be redeemed out of the surplus in the treasury, which has been done. The balance in the treasury in May was \$1,043,372.

The University.—The total number of students this year was 317. The medical department numbered 186 at the spring term, and graduated 59, of whom 15 were students in déntistry. The university won the highest award at the Atlanta Exposition for the best collective exhibit of university work. It now offers free tuition to all students of proper age and characteristics.

ter who pass the required examinations.

The Penitentiary .- Charges of mismanagement in regard to the contracts for building the Penitentiary having been made, an investigation was demanded, and a legislative committee was appointed, which, after a thorough investigation, made a report sustaining most of the charges. It was found that there had been fraud and corruption in the sale of lands to the State for the new prison and in the letting of the contracts for building it. The evidence showed corrup-tion on the part of M. L. McDowell, one of the building and purchasing committee, whose resignation was at once demanded by the Governor, Others implicated in the frauds were C. C. Estill, State Railroad Assessor; John A. Fite, Adjutant General; E. L. Laurent, supervising architect; and W. C. Smith, the architect who prepared the The commissioners were wholly unfamiliar with the duties required of them. greatest fraud appears to have been in the letting of the building contract. The State officers above named were forced to resign.

The report on the condition of the main prison at Nashville was very unfavorable; dirt, squalor, idleness, mismanagement, and suspicion of immorality were among the conditions re-

ported.

Contracts for the new buildings were signed in December. The cost is not to exceed \$300,000. Bids were received for leases of convict labor, but none had been accepted at the close of the year. There are about 1,600 State prisoners, scattered as follows: Main prison, 605; Tracy City, 425; Brushy Mountain, 350; Coal Creek, 100; new prison, 50; and quarry, 50. The stockade at Brushy Mountain will accommodate between 500 and 600 prisoners. On the recommendation of the Penitentiary Committee, the Governor pardoned 49 convicts in April, some of whom were women, others boys, others invalids, and in one or two instances the pardon was the reward of good conduct.

The Centennial Exposition,—Although the Legislature made no appropriation, progress has been made in the preparations for the exposition to celebrate the hundresth anniversary of Tennessee's statehood. Large subscriptions have been made, officers chosen, a site selected in the outskirts of Nashville, comprising 320 acres, some of the building designs accepted, and some contracts let. The corner stone of the Fine Arts Building was laid in October. It is expected that the exhibition will open Sept. 1.

1896.

Wantauga Tree.—The one hundred and fifth anniversary of the acceptance of the territory of Tennessee was celebrated April 2 by the planting on the Capitol grounds of a tree from the old fort at Wantauga, the first white settlement

west of the Alleghanies.

The Election of Governor.—The returns of the election of 1894 gave a plurality of 748 to H. C. Evans, the Republican candidate for the error. The Democrats claimed that this result was due to fraud (see "Annual Cyclopasha for 1894, page 739), and Gov, Turner sent a political and address to the Legislature asking for an investigation. The chairman of the Republic set that Committee also sent an address stating the legal position taken by his party, which was that, to carry out the provisions of the tought in

The Democratic mapority devoted upon the street wave, three belts having been introduced to marriage the method of presentation and a resisting passed postpooling the opening returns, and also postpooling the return and also postpooling the return to the first investigation. One of the

tioned was passed, and Mr. Evans sent in a protest against the act as being unconstitutional and void. Soon after the returns were opened he took the oath as Governor before a justice of the peace at the State Library, Feb, 6, in the presence of several State officials and about 150 members and visitors, claiming that, as the returns showed his election, it was his right and duty to take the oath. Having been sworn to and subscribed, it was offered to the Secretary of State to be placed on file, but he refused to

The vote was opened in joint convention, and the objections of Turney and Evans were made to the returns of the various counties, Mr. Evans's objections being made under protest against the manner of proceeding. Both contestants objected to the returns from 5 connties; Turney objected to 29 in addition, and Evans to 40 others; those of 22 were not objected to. The Democrats charged frauds in the eastern counties mainly, the Republicans in the middle and western. The former alleged the middle and western. that in the 29 counties 29,733 votes were cast without the payment of poll taxes, of which 22,-774 votes were east for Evans and 6,959 votes for Turney. It was estimated that 24 per cent. should be deducted for the votes of citizens who were over age or otherwise legally exempt from the payment of poll taxes, which would leave Evans credited with 17,208 and Turney with 5,389 illegal votes on the face of the returns. The total illegal vote on the face of the returns on account of violations of the poll-tax law was estimated at 22,597. It was also charged that convicts had been allowed to vote in Anderson County; that votes had been openly bought in Campbell County; that in Cocke County no legal returns whatever were made; that in Greene County the box was illegally opened before the time for closing the polls; and other irregularities were named.

The answer and counter-charges alleged that 63,596 votes east for Turney and 31,796 cast for Evans were affected by illegalities and frauds. There was an answer to this document, making

specific denials.

The bill that had been passed provided for the appointment of a committee of 5 Senators and 7 Representatives to take proof concerning all alleged frauds and violations of election laws in any part of the State, and to report within for whave to the joint convention, which should then 'ry the ease upon the report and proof sub-

majority report, signed by the 7 Democratie members of the committee was submitted April 27, and showed a plurality of 2,358 for Turney. The committee had cast out 22,389 votes as illegal, of which 12,656 were for Evans and 9,733 for Turney, making a net loss of 2,923 for Evans. His plurality was at first reported as 748, but errors found in tally sheets had reduced it by nearly 200. The minority report declared that the committee exceeded its anthority in deciding some charges not specific; that it did not find according to the law and the facts, and that it ruled in opposite ways as Turney's interest required. Arguments were heard before the Legislature in joint convention, and the majority report was adopted by a vote of 70 to 57. Two were excused from voting, one of whom gave as the reason that, while his constituents desired him to support the majority report, he could not conscientiously do so, believing that the investigation had not been full and thorough. Gov. Turney was declared elected, and was inaugurated May 8.

Legislative Session.—The Legislature convened Jan. 7, and adjourned May 14. A recess of about forty-five days was taken, in order to allow the investigation of alleged election frauds to be made. It reconvened April 2, and took another recess of ten days—April 12-22—for the purpose of giving time for the election and other committees to finish their work. An extra session was called by the Governor, begin-

ning May 30, and adjourned June 17.

Ernest Pillow was chosen Speaker of the Senate, and John A. Tipton Speaker of the House, The Democrats had 20 Senators and 60 members of the lower house; the Republicans, 10 Senators and 32 in the lower house; the Populists, 3 and 7, respectively. Isham G. Harris was re-elected United States Senator. The Republican candidate was E. J. Sanford, and A. L. Mims was voted for by the Populists.

A Court of Chancery Appeals was created for the purpose of assisting the Supreme Court to finish the cases on hand and to try all the cases on the docket at each term hereafter. It is to

consist of 3 judges.

In order to restrict coroners' inquests to cases where they are actually needed, an act was passed requiring certain evidence in writing before such inquest can be held establishing a probability that death resulted from violence or foul means.

Superintendents of schools in counties of 30,-000 and over were forbidden teaching or taking contracts for school work, and a law was passed to provide for the better qualification of county

superintendents.

The game laws were amended; it was made unlawful for any person to ship from Gibson County any quail at any season of the year, and a misdemeanor to hunt any quail or partridge in Grainger or Hamblen County from April 1 to Oct. 1; laws were made to protect deer in certain counties, and to protect game in Warren County. Laws were also made for the better protection of fish.

The so-called no-fence law was made to apply to Davidson, Knox, Shelby, Gibson, and Madison Counties, and it was provided that other counties may adopt the law by a majority vote. It designed to relieve farmers of the expense of closing their fields, and involves the preventof live stock from roaming at large.

The boundary lines of many counties were changed. Certain cities and counties were au-thorized to fund their floating debts. The following cities were incorporated : Dover, Stewart county; South Fulton, Obion County; Dayton ad Spring City, Rhea County; Jamestown, Fasters County; Camden, Benton County; and Singhampton, Shelby County, Some charters cities were amended, and those of the follow-Harrowgate and Bacchus, Claiborne County; Brwin, Unicol County; Clifton, Wayne County; Trimble, Dyer County. The acts incorwere repealed: Oakdale, Morgan County; ating White Pine, Jefferson County, and Hentown were repealed, and an act was passed epealing the charter of Rockwood, Roane County, and reincorporating it.
Other acts of the regular session were:

To cede to the United States jurisdiction over cer-lin lands in Hamilton, Hardin, and McNairy Coun-ies, including the battlefields of Shiloh, to establish national park.

To establish a system of reformatory institutions

r youth. To authorize Memphis to issue \$3,000,000 of bonds

refund old debts.
To provide for the organization and support of batella associations.
To provide for labeling, stamping, or marking oleoargarine, butterine, and imitation butter, wide against coloring it.

To prevent the spreading of contagious or infec-us diseases among domestic animals.

To prevent the attachment or garnishment of fu-

re salary or wages of any employee.

To prevent appeals! To prevent special assignments, and to secure to ditors a pro rota distribution of the property esand as ets of debtors

To provide for the teaching of the effect of alco-olic drinks and narcotics and smoking eigarettes in

be public schools.

To create a Board of State Charities.

To-change the name of the Mosas Creek Baptist ollege to the Carson and Newman College.
To make unbelievers competent witnesses.

To authorize the United States to acquire lands for ah-cultural station.

To regulate the business of insurance other than and casualty insurance upon the assessment plan. To have copied the registers of the Tennessee solutions. diers in the (Confederate army, and appropriating

appropriating \$17,000 for the maintenance of the neederate Soldiers' Home for the next two years.

Resolutions were adopted as follow:

To memorialize Congress to enact legislation that will provide for the free and unlimited coinage of a la-ter and gold at the ratio of 16 to 1.

To provide for the settlement of the claims between the State and the United States growing out of the state of railways by the Government during the

A commission was appear to, 1 de a . . for revenue, and the federal special ters were appointed! To inserting a c irregularities in the management of his tentiars; to examine the others of the same truller and the Tremourer; to examine the Mine of the Secretary of State; to examine min the expenditures of the Department of Agriculture and the Bureau of Labor, to investigate the State printing account, to examine into the cost of criminal presecutions, and to derive a plant for reducing it. A committee on insurance and building and lean accordations also was post-shed

The Comptroller and the Tremouver were reelected, and most of the other Mate efficials who are appointed or confirmed to the Legisla-

ture.

In the call for the extra service, 6 subjects were named for legislative action. The approxprintions for the support of the State Government and institutions, and other public pastprince; taxation and revenue; regulation of State batike; cotablishment of a beter district; provision for making registration less frequent; the providing of a main prison and stockade for the State's convicts.

The revenue bill prepared by the commission, which had passed the Senate at the regular occsion after various changes, was empeted into a law. It reduced the State tax from 45 conts on the \$100 to 35, of which 20 cents is for Mans and 15 cents for school purposes. The ecounty courts are empowered to key a county tax and exceeding 30 cents on every \$100, exclusive of the tax for public reads and schools and interest on county debts, except as otherwise provided in the bill. A long list of privilege taxes feld lows, the highest of which is \$10,000 a sear on railroad companies not paying ad sudarem tax to the State and operating of controlling 800 miles or more of read in the State, and \$5,000 on those operating from 100 to 400. The highest tax on express companies is \$2.600: A large number of the privilege taxes are reductions, in some cases by one half.

The inheritance tax is consisted, and the basurance taxes are unchanged. Pod sellers are taxed \$250, and circular companies \$10, except in places of fewer than 2,000 inhabitants, where

the tax is but \$100.

The action taken in reference to regulated orth provided that a general regularation shall be held next August in all cities, towns, and districts subject to the registration laws; after that date there will be regulation cours two years, ear corpt in civil districts of Libbs propulation and inc cluded in countries wholl's nations to registrations. and in these districts registration will be held every four years. There every year, in all districts subject to the registration, there will be three date registration to allow all who have farical to register to do sea

An appropriation till and a leave bill were

josewal.

An important part of the work was that prorading for the Penitentiary. Both political parties were committed to the abolition of the mise eviden, and the current lease was to exper- in-1 1 tiel. As quarters could not be prove all the prisoners by that time, it seemen

sary to lease a part at least temporarily, and the two houses almost came to a deadlock. The bill as passed calls for the building of a new prison, to cost not more than \$350,000, on the Cockrill farm. It calls for \$20 cells in the main prison, and provides for 1,000 convicts at the Brushy Mountain mines, appropriating \$40,000 for building stockades there and opening up the mines. It provides for 3 prison inspectors.

Conventions. — A "sound-money" convention assembled at Memphis, May 23, and delegates were present from every Southern State. The convention was addressed by the Secretary of the National Treasury, and adopted a plat-

form favoring monometallism.

Another convention was held in the same city, June 12-13, in the interest of silver coinage. A large number of those who spoke favored placing the silver question above party allegiance, and there was some prospect of a bolt on that account; but the resolutions omitted all reference to party lines, advocating free coinage and attributing the hard times to the demonetization of silver.

A wheat convention was held at Nashville, Sept. 10-11, attended by about 60 wheat growers and millers, from all parts of the State.

The National Park .- The dedication of the Chattanooga and Chickamauga National Park, Sept. 18-20, was attended by a vast crowd, estimated at 40,000, among them great numbers of veterans of both armies. Of the 10 square miles constituting the area of the park, over 5,000 acres are forest and about 1,000 acres open farms. A central driveway, passing through and overlooking all the heavy fighting ground, has been built 20 miles long. Forty-two miles of the roads of the battles have been reopened and improved in the most substantial and enduring manner, and new roads have been closed up. Many of the minor roads have also been cut out and graded, so that there are now about 60 miles of driveways in the park, all of them along the roads of the war. The removal of underbrush and the clearing out of the new growth of timber has opened the forest so that carriages can drive through it in all directions, and the appearance now is like that of an immense area of forest pasture in the blue-grass region.

The Chickamauga portion of the park is connectal with the Chattanooga end of it by natotal driveways. Within the park the Governhas set up 400 historical tablets, and will at 1 600 more, each 3 by 4 feet, consisting of plates, glazed black, fastened to iron in concrete. On these tablets in emletters are set forth briefly and in historic details of the six bat-Missionary Ridge, Lookout of Knob, Wauhatchie, and To valso mark the positions corps, divisions, and briand Confederate, and the " c. zutien are stated con-. design, in in

shells, in honor of 4 general National officers and 4 Confederate officers, killed in action.

In addition, the Government has built 5 observation towers, 70 feet high, 2 on Missionary Ridge, and 3 on Chickamauga field. Finally, it has marked the most important fighting positions occupied by each of the 35 National batteries and 39 Confederate batteries engaged in the battles, by 400 mounted cannon of the types and appearance then used. Besides the guns themselves the battery positions are described on tablets. The lines of earthworks used by the contending armies have been found also, and are being carefully restored.

The States have set up 171 monuments in memory of the action of their regiments.

Shiloh.—Next in interest to the dedication of the National Park, was the reunion of veterans on the field of Shiloh on the thirty-third anniversary of the battle, April 6.

TEXAS, a Southern State, admitted to the Union Dec. 29, 1845; area, 265,780 square miles, Population, according to each decennial census since admission, 212,592 in 1850; 604,215 in 1860; 818,759 in 1870; 1,591,749 in 1880; and

2,235,523 in 1890. Capital, Austin.

Government.—The following were the State officers during the year: Governor, Charles A. Culberson, Democrat; Lieutenant Governor, George T. Jester; Secretary of State, Allison Mayfield; Treasurer, W. B. Wortham; Comptroller, R. W. Finley; Superintendent of Public Instruction, James M. Carlisle; Commissioner of General Land Office, A. J. Baker; Commissioner of Agriculture, Insurance, Statistics, and History, A. J. Rose; Adjutant General, W. H. Mabry; Attorney-General, Martin M. Crane; Chief Justice of the Supreme Court, Reuben R. Gaines; Associate Justices, Leroy G. Denman and Thomas J. Brown; Clerk, Charles S. Morse,

Finances.—The report of the Comptroller for the year ending Aug. 31, 1895, showed these figures: Receipts, \$2,086,578,20; amount of warrants issued, \$2,329,414.56; retrenchment in expenses of the various departments at the capital, \$78,293.50; poll tax assessed, \$711,168.50; advalorem tax assessed, \$3,874,070,40; occupation taxes, \$792,770.25; total acres of land assessed, 133,265,147; valuation of lands, \$412,311,585; valuation of town lots, \$186,815,838; valuation of live stock, \$75,418,674; valuation of railroads, \$70,420,925; and assessed value of all other property. \$115,943,545; total tax assessed, \$4,585,-238.90; and net reduction of assessed values from the total of the previous year, \$4,210,422. The expenses of the State were reduced about \$275,000 per annum, and the extraordinary increase in the taxes was due to deficiencies in revenue, estimated at \$1,800,000. The State debt aggregated \$3,992,030, of which the permanent school fund held bonds amounting to \$2,162,600; the University fund, \$567,540; the Agricultural and Mechanical College, \$209,000; the State Lunatic Asylum, \$111,700: the Blind Asylum, \$111,500; the Deaf and Dumb Asylum, \$61,000; and the Orphan Asylum, \$9,200—leaving \$750,490 in the hands of individuals.

Legislative Session.—The Legislature met in regular biennial session on Jan. 8, and Govelect Culberson was inaugurated on the following day. The message of the retiring Governor treated of the general condition of the State. and that of the incoming one was a plea for the exercise of strict economy in the administration of the government. The session was extended beyond the usual time, and an uncommonly large number of bills was considered. Among the bills that became laws were those to set apart the 22d day of February as " Arbor Day to transfer the Confederate Home from private to State management; to assess national bank notes and United States Treasury notes; to epcourage irrigation; to provide for the construction and maintenance of ditches, drains, and water courses, and for the improvement and enlargement of the natural drainage of the several counties; to authorize cities and towns of 10,000 inhabitants or less to abolish their corporate existence; to incorporate the city of Sherman; to stablish an arbitration commission by which labor grievances may be adjusted; to create life and accident insurance companies; to adopt and publish the revised civil statutes, the penal code, and the code of civil procedure; and a arge number to increase the revenues of the

State and to quiet titles to land. Education. - The school census of 1895 showed 547,904 white pupils and 170,901 colored, an increase in the year of 25,153, principally in the northern and middle counties. In May the Superintendent of Public Instruction rendered a decision, on appeal, denying the right of sectarian schools to partake of the benefits of any distribution of the State Free-school fund toward paying the teachers of such schools where the children are numbered among freeschool pupils and taught by sectarian teachers. Details from the reports of the various institutions for the year ending Aug. 31, 1894, reported in 1895, included the following: Total expenditures on account of the public schools, \$3,504,-357, of which \$2,892,296 was wages to teachers; number of teachers, 12,462; number of high schools, 70; number of endowed academies, seminaries, and other secondary schools, 42, with 180 instructors and 3,574 students; colleges for women, 4, with 42 instructors and 636 students; and universities and colleges of liberal arts, 11, with 165 professors and instructors, 3,513 students in all departments, and 27,438 volumes in the libraries. The State University had 46 professors and instructors, 700 students, 13,000 volumes in its libraries, \$580,000 in productive funds and a total income of \$70,000. The State funds, and a total income of \$70,000. Agricultural and Mechanical College had 24 professors and instructors, 293 students, 211 acres under cultivation, farm lands valued at \$24,160. buildings and equipments valued at \$53,120, recelpts \$102,780, and expenditures \$107,280; and the State Normal School, at Prairie View. where similar instruction is given to colored youth, had 19 instructors, 184 students, property valued at \$18,150, and receipts and expenditures of \$28,133. The Texas Deaf and Dumb Asylum and the Texas Deaf, Dumb, and Blind Asylum for Colored Youth, both in Austin, had I'm instructors, 265 inmates, grounds and buildings valued at \$257,000, receipts \$58,020, and expenditures \$48,457; and the Texas Institute in for the Education of the Blind, at Vustin, had 15 instructors, 171 inmates, grounds and buildings valued at \$135,000, receipts \$42,900, and

Railroads. The Hailroad to a separated 9,750 70 miles of main the first open to traffic on June 30 leafs all or struction in the preventing four years was a counties already fully provided with random facilities, and it was claimed that not a most that was built in that period was really accessary. Furthern counties had a field of 6,660 in miles, 125 others had an average of 36 miles each, and 81 had none whatever in his mean gural message, June 16, test twitters in edimented the company valuation of an endrouse in the State at \$3,5000,000, and the taxable valuation at \$75,000,000.

Agriculture,—The United States Repartment of Agriculture reported as follows on the principal crops of 1855 Corn. 4,087,002 acres, 107,055,565 bushels, value \$31,057,755, wheat, 165,700 acres, 2,081,660 bushels, value \$1,270,882; oats, 703,925 acres, 14,569 lib bushels, value \$3,787,586; rye, 4,387 acres, 24,139 bushels, value \$1,787,586; rye, 4,387 acres, 24,139 bushels, value \$18,097; potation, 14,338 acres, 1276,682 bushels, value \$955,344 and has \$51,734 acres, 676,677 tota, value \$4,351,663, total value \$43,977,067. The same authorite reported the cotton crop of 1854 V6 at 3,155,618 bushes, an amount exceeding the total photonic of the United States in 1870, more than half of the product of 1880, and nearly half of that of 1890.

Live Stock.—In January, 1906, the Laused States Department of Agricultury estimated the number and value of describe animals on furnia and ranches at the close of 1955 as feature Horses, 1,183,777, value \$74,528,683 modes, 264,069, value \$9,125,256, much cover 185,866, value \$14,024,615, onem and their earlier 5,518, 644, value \$69,520,010, sheep, 2,665,256, issue \$3,889,540; and switer, 3,685,119, value \$10,806,078; total value, \$131,634,222.

Banking,-On Oct. 31 1865 there were 214 national banks in operation and 60 in separate tion. The active once had a combined regular of \$22,523,000, circulating to dee made and any \$5,100,079; leans and discounts \$42,002,000 com and com certificates, \$2 650,650 I amed States lands, \$4,100 Abl. an excess of \$610.91? beyond amount required to law dogs one fill 979,007; and reserve \$9 (155 bb), an excuse of \$4,000,501 beyond requirement. During the year ending west mit 1 wit the exchanges at the United States clearing to muce at tout and in House ton, Dallas, Fort Worth, and Warm aggregated \$441.61*354, an increase of \$11.570.898 court these of the previous year. The State banks on June 29 1986 newsbered 5, and had a come bitter april of \$50 110 resources \$2.219,182; \$1:004 (0)1, and earlies and profine deposts 8 230 333

Mineral Resources. According to the report of the United States tendequesal Sources on Mineral Resources of the United States on 1814 pound in 1892, the output of coas in Icras was 120.48 short tens, valued at 1974. 43% of which 417.2% tone were leashed at in nitree for shipment and the remainder is local trade and used by mine emphasizes the exception of a slight decrease in 1 of 1891 from that of 1890, the production has shown a steady increase since 1889, when it was 128,216 tons, valued at \$340,117. During 1894 there was a production of 30,259 long tons of brown hematite iron ore, valued at \$11,571, and 4,671 long tons of pig iron. An oil, locally called petroleum, but known to differ from it, found in sinking wells for water near San Antonio, and valuable as a lubricant, had an output of 60 barrels. A rich find of cinnabar was discovered in the mountains within the Big Bend of the Rio Grande, about 100 miles from Marfa station on the Southern Pacific Railway, and was explored in August, 1894. Prof. W. P. Blake contributed a technical report on the re-gion to the "Transactions" of the American Institute of Mining Engineers. Other productions of the year were: Sandstone, \$62,350; limestone, \$41,526; salt, 142,857 barrels, value \$101,000; cement, 8,000 barrels, value \$24,000; and gypsum, 6,925 short tons, all calcined into plaster, valued at \$27,300. The various clay products were: Common or pressed brick, \$895,-359; fancy and ornamental brick, \$16,989; fire brick, \$57,360; vitrified paving brick, \$1,000; drain tile, \$10,049; sewer pipe, \$2,000; miscellaneous, \$16,096; total value, \$1,028,853. State Geologist E. T. Dumble, reporting in 1895 on the granite interests, said that during 1894 there had been shipped 150,000 tons of stone from the Granite mountain, 8 miles south of Burnet, for the jetties at Galveston, and that large quantities were being quarried for similar use at Sabine Pass and Calcasieu. Large shipments were also being made for use in the construction of public buildings within and without the State. The new courthouse at Fort Worth is being built with red granite from a quarry near Kingsland.

Pugilism .- In consequence of the announcement that a prize fight would take place in Dallas County in October, Gov. Culberson issued a proclamation, July 27, declaring prize fights to be unlawful in Texas, reciting the duties of the peace officers, and warning all parties interested in the proposed contest. He also called a spectal session of the Legislature, to meet on Oct. 1, and pass a bill making prize fighting a felony. Such a bill was adopted Oct. 2, by a vote of 107 yeas to 5 nays (15 absent or not voting) in the House, and by 27 year to I nay in the Senate.

Farmers' Congress.-A State Farmers' Congress was held at Fort Worth, Feb. 19 and 20, with issued an appeal to the farmers of the Sign to reduce the cotton acreage at least 25 to undertake a diversification of and arthrapd sheep, and, as far as possible, of the encourage the establishment of

fesery description.

Irrigation .- The second annual convention of the Texas Irrigation Association was held in San Antonio, Nov. 12 to 14. Several interesting papers were presented, and resolutions were adopted providing for the organization of auxiliary associations in each county, and requesting the director of the United States Geological Survey to extend its topographical map work over those parts of western and southwestern Texas in which the results will be the most

readily applicable to irrigation.

TURKEY, an empire in eastern Europe. The Sultan is an absolute ruler under the prescriptions of the Koran, and by most Sunnite Mohammedans he is reverenced as the Khalif of Islam. The throne is hereditary in the house of Osman, the eldest male born in the imperial harem succeeding when a vacancy occurs. reigning Sultan is Abdul II, born Sept. 21, 1842, who came to the throne on Aug. 31, 1876, when his brother, Murad V, was deposed on the ground of insanity. The Sultan's Cabinet was composed in the beginning of 1895 as follows: Grand Vizier, Djevad Pasha, appointed in September, 1891; Sheikh-ul-Islam, Mehmed Djemal Eddin Effendi: Minister of War, Riza Pasha; Minister of the Interior, Halil Rifat Pasha; Minister of Foreign Affairs, Said Pasha; Minister of Finance, Nazif Pasha; Minister of Marine, Hassan Pasha; Minister of Public Instruction, Zuhdi Pasha; Minister of Justice and Worship, Hussein Riza Pasha; Grand Master of Artillery, Zekki Pasha; Intendant of Evkafs, Galib Pasha; Minister of Commerce and Public Works, Tevfik

Pasha; without portfolio, Djevdet Pasha.

The Army.—Military service is obligatory. the term of service in the permanent army being three years for the infantry and four years for the other arms, but every conscript when he has served five months can purchase exemption for the rest of the period. Conscripts assigned to the depot reserves must serve from six to nine months. After passing through the active army men may be called upon to do military duty for two or three years in the chtiad, or reserves, eight years in the redif, or Landwehr, and six years in the mustahfiz, or Landsturm. The army is distributed in 7 ordus, or military circumscriptions, besides separate divisions in Arabia, Tripoli, and Crete. There have been organized 282 battalions of infantry, varying from 250 to 550 men, armed with Mauser rifles of 765 and 95 millimetres' caliber, fitted with magazines holding 5 cartridges; 195 squadrons of regular cavalry, each numbering from 50 to 80 troopers, besides 56 regiments of Kurdish irregulars, each numbering 600 men; and 169 batteries of field artillery, each of 6 pieces, 18 batteries of mounted artillery, and 46 mountain batteries. The actual peace strength of the army is about 180,000; the war strength, 800,000 men. The Navy.—After having sold the strongest

vessels to other Governments in the stress of financial difficulties, the Ottoman Government has begun to replace them, but has no modern armor-clad yet in a state of complete efficiency. The most powerful is the "Mesoudyeh," of 8,900 tons displacement, with 12 inches of armor and a battery of 12 18-ton guns. Four old ironclads, of 6,400 tons displacement, are being fitted with 2 11-inch Krupp guns mounted in

barbette towers. The "Hamidveh," of 6,700 tons is protected on the side with 9-inch plates and carries 10 10-2-inch Krupp guns in a central hadter. The "Abdul Kader" is a cruiser of 8,000 tons, protected with 14-inch armor and armed with 4 11-inch Krupp guns mounted en barbette, There are a dozen old ironclads fit for port defense. Two deck-protected cruisers, of 4,050 tons, have lately been constructed, and 3 smaller ones are building. A torpedo destroyer, launched in 1892, has a speed of 22 knots. Of torpedo hoats, 9 of the first, 15 of the second, and 7 of the third class have been acquired.

The Armenian Question.—The dragomans of the British, French, and Russian consulates at Erzerum were selected to act as European commissioners at the inquiry into the killing of Armenians in Sasun, Kurdistan, in August and September, 1894, and the joint commission began its investigation at Mush in January, 1895, At the suggestion of European governments the Governor of Bitlis, Tahsin Pasha, was removed soon after examination of witnesses began.

The Armenians who occupy the fertile valleys In Sasun are accustomed to pay heavy tribute to neighboring Kurdish chiefs, who in return engage to protect them against Kurdish marauders. For some years the villages of the Dalvorig ers. For some years the villages of the Daivoring district had refused to pay the Government taxes, on the ground that they could not afford to give more than the Kurds exacted of them, e Governor of Bitlis, learning that Armenian agitators were at work among the peasants, ordered Kurdish irregulars to keep guard over the refractory villages. At the end of May, 1803, Daghmatian, one of the revolutionary agitators, was caught and sent to Constantinople. A few days afterward the Armenians attacked Kurds encamped in the neighborhood, and drove them off. The Turkish governor then placed a ard of troops and Kurds in the disturbed disirict. The Kurds and the Armenians had been on bad terms for eight years. The Kurds accused the Christians of robbing villages, kidnaping women, and desecrating mosques. The troops quartered on the Armenians of Dalvorig trampled their crops, and in retaliation the Armenians robbed caravans of wheat and plun-dered the flocks of Kurds. They were ready to fight the Kurds, having now some breechloaders that a gunsmith, sent by the revolutionary party from Russia, had made out of their old flintlocks. The revolutionary funds were provided by the Armenian merchants of Russia and Per-Ma. Daghmatian and Dr. Hampartsum Boagian, who was afterward arrested and sentenced to death in December, 1894, under the name of Murad Effendi, are supposed to have come from Russia to head a revolutionary uprising that they planned to start in 1895 simultaneously in Zeitun, Sasun, and on the Russian and Persian frontiers. The Armenians of Sasun were capected to make an attack on Mush and attempt to surprise the garrison and seize their arms and ammunition. The leaders counted on the inammunition. tervention of the European powers rather than upon the ability of the Armenians to cope with the Turkish forces. Dr. Hampartsum said at his trial that he went to Dalvorig to teach the Armenians not to sell their daughters in marriage and to stand up for their rights against

the Kurds. After the last of a contract out became a new research state of the l'asha, unier instructues from their and only placed a garrious of trupe is the min and after the outbreak of less at was jour cally kept in a state of earge. The har of tribes understood that they might harry and rich the fractions villagers of their was a Kurdish tribe seized some cuttle in August 1894, the Kurdish chief who was the product of of the villages believe the Armeniane to drive off the maraulers. Some excited official telegraphed to Constantingde that the threatened revolution had broken out in home, and the order came back to punish the villages to the last extremity. Zeki l'asha sent Turkish regulars to surround the disturbed district. while the Kurdish irregulars were ment forward with instructions to kill and destroy without mercy The Kurds, who were under contract to pretent the villages, joined the others when the eignal for rapine went forth, and all embraced the exportunity for pillage, but had little heart for the slaughter that the Turkish officure thought would be pleasing to the authorities at Constan-tinople. Therefore Turkish soldiers, assuming the Kurdish dress, went in to encourage and lead in the work of carnage. The Armenana defended themselves as well as they could to their villages, till their ammunitors was assety exhausted, and then concentrated in the crater of Mt. Andok, where they were eventually pud to the sword, or fled into the forests or mounts tains, where they were hunted and cut down. The survivors tell stories of crucity, rape, said butchery that seem incredible- as here Turk ish soldiers eagerly slew prognant women, because they could thue with one struke aidd two to their tale of victims. They relate many takes of Armentan heroism, too, how bhaker a young widow, led a band of masdens in a loap from a cliff to escape Turkish harems, and how more and women refused, without exception, to save themselves from torture and death by embrace ing Islamism. When uniformed trace was cannon entered the district the Armenana did not attempt to resul them until they were murounded in their mountain fastness. Were these 40 villages were destroyed. The number of individuals slain to supposed to have been fur-tween 3,000 and 5,000 Zeki Pasha reported 1,720 Armenians killed. Abdul Hamid regress. ted keeply his precipitate order, and is said to have represent his first secretary Secreta Pashia, for his haste in forwarding it with much hards ness that the agricated official, who suffered from a heart affectives, fell dead on the spot

When the European commissioners first actived in Mush is Armenian was allowed in communicate with them. Attempts were making to invelgle the Mush Armenians into signing a statement that the reports of the basis minimizes were paire inventions. The president in Bidlis were effected their freedom if they would sign papers incriminating the imprisoned Armenian papers incriminating the imprisoned Armenian trailers, and Mr. Haward, the British wire consul at Van, who first reported the massacre After the removal of Taham Pasha, Ancies incrime Mejlis were released after having the imprisoned seventy-two days without charges

TURKEY. 723

and 11 who remained in confinement were set free later, but 11 notables had died in prison. The foreign commissioners were now able to discover and indicate to the Turkish commission Armenian witnesses who could throw light on the Sasun horrors. Sentences of death that had been passed by a court-martial at Erzinghian upon 21 Armenians and sentences of imprisonment for life or long terms passed upon 37 others were confirmed in January by the

Court of Cassation in Constantinople.

The Armenian National Assembly elected Monsignor Izmirlian, an outspoken champion of Armenian liberties, to be the Patriarch at Constantinople. The Porte at first refused to confirm him unless he would engage to conform his conduct to the wishes of the Government. He steadily refused, and in the end was accepted without pledges, and was enthroned on Jan. 9. 1895. In his address he said that fidelity to the Government should be based upon the conviction that the Armenians would enjoy absolute security for their honor, their lives, and their property. All the Armenian bishops were in prison or exile. The Archbishop of Marash had been sentenced for harboring rebels; the Archbishop of Zeitun was convicted on charges of fortifying a monastery, delivering prisoners from jail, and presiding over a revolutionary commit-tee; the Bishop of Mush was accused of inciting the Armenian population to sedition; and the Bishops of Hadjin, Kemakh, Bulanek, and Adana and the Abbots of Fernuz and Surp-Arakelotz were restrained of their liberty on similar charges. The Bishop of Arabgir, reputed to be an active revolutionary worker, was first removed to Diarbekir, and when he again incited the people he was exiled to Jerusalem. The new patriarch reprimanded the Bishop of Adrianople for signing, at the solicitation of the Ottoman authorities, an address to the Sultan reprobating the disloyalty of the Armenians of Asia. Besides the prelates, 55 priests and deacons and many other leading members of the community were undergoing imprisonment or exile. From the beginning of 1895 the arrests in Constantinople and in Asia became more frequent. It was estimated that nearly 3,000 Armenians were political prisoners in the various provinces.

The investigation of the Sasun affair and the menace of European coercion to secure the execution of Article LXI of the Berlin Treaty caused the Ottoman authorities to relax the severity of some of their repressive measures, though the increased activity of the Armenian agitators compelled the police to be more vigi-lant than ever. The Huntchagists seized the opportunity to promote their revolutionary whemes by unscrupulous methods. Some of their were supposed to have laid a plot to murder Dr. Edward Riggs and two other American mil-someries at Marsovan who had devoted their lives the tile education of Armenian youth, mereis in order to fasten the blame upon the Turks and provide the intervention of the United States Garament. The revolutionists are reperiod to have committed inhuman outrages, such as pure turing the flesh of men and women and ign ing glit powder in the wound, that the infuriated Turk might shock the Christian

world by the attenty of their retaliation.

A commission appointed by the Sultan to consider a scheme for administrative reforms in Armenia began its sittings on April 23, in Constantinople, under the presidency of Turkhan Pasha, Governor of Crete. A project of Armenian reforms drawn up by the ambassadors of France, Great Britain, and Russia, was presented to the Sultan on May 11. It was recommended that the names of valis to be appointed should be submitted for the approval of the powers; that the boundaries of the vilayets and their subdivisions be altered so as to make the administrative districts as homogeneous in population as possible; that a gendarmeric be recruited from the Mohammedan and Christian population alike; criminal courts constituted; prison inspection introduced; the collection of taxes intrusted to local officials, and a share retained for local administration; that the farming of tithes and the corvée be abolished; and that the Kurdish Hamadieh cavalry should not wear uniforms or carry arms except when exercising or serving with the regular Turkish troops. The reforms were to be carried out under the direction of a high commissioner appointed with the approval of the powers and under the supervision of a permanent Committee of Control sitting at the Sublime Porte, to consist of 3 Mohammedans and 3 Christians, One third of the administrative, judicial, police, and other offices should be Christians. The Christian mutessarifs, kaimakams, and mudirs should be placed over the sanjaks, cazas, and communal circles in which the Christians are most numerous, and should have Mohammedan assistants, while in vilayets, sanjaks, cazas, and nahies in which the governor or mutessarif or kaimakam or mayor is a Mussulman he would have a Christian assistant. As a preliminary to the reforms, the Sultan was expected to amnesty all Armenians convicted of purely political of-fenses, restore exiles to their homes and property, and indemnify the victims of Sasun.

The Porte replied to the memorandum of the ambassadors on June 3, objecting to the proposed interference of the powers in the appointment of a high commissioner and to the minute and specific form of the reforms demanded, many of which were pronounced impracticable. On June 16, after a new Cabinet had been appointed, a fresh reply was given in which the Ottoman Government accepted the reforms in principle, but requested a discussion of the details, and denied that the Berlin Treaty confers upon the powers the right to demand the guar-

antees formulated in the scheme.

Djevad Pasha, the Grand Vizier, was dismissed on June 8, and Said Pasha, ex-Grand Vizier, was appointed in his stead. Turkhan Pasha became Minister of Foreign Affairs in Said's place; the other ministers remained. A committee of ministers, composed of Turkhan Pasha, Halil Rifat Pasha, Riza Pasha, Zuhdi Pasha, and Tevfik Pasha, was appointed to devise a scheme of Armenian reforms in connec-tion with the project of the powers. Shakir Pasha was appointed to superintend the application of the reforms that should finally be adopted. On Aug. 1 the Porte made a detailed reply to the powers, proposing to appoint Christian assessors to assist the valis, to inspect and

improve the prisons, to recruit gendarmeric and police from Mohammedans and Christians in proportion to their numbers, and to prevent the Kurds from committing excesses or eneroachments. This reply was declared by the ambas-sadors to be unsatisfactory. On Sept. 7 the Porte offered, as further concessions, to grant to the dragomans of the embassies the privilege of communicating directly with the Turkish Committee of Control, to admit Christian officers to the gendarmerie, to establish a rural constabulary, to allow the mudirs to be elected by the councils of elders, and, while no Christian vali or mutessarif should be appointed, to select the other administrative officers from Mohammedans or Christians in proportion to the popula-This did not go far enough to satisfy the British Government, which now began to threaten coercion, but the Russian Government was unwilling to proceed to extreme measures. The Porte complained at Paris and St. Petersburg of the discourteous attitude of Great Britain. declaring that it was derogatory to the Sultan's prestige, but the replies made to this protest gave no encouragement to Turkey. Lord Salisbury went beyond the first demand for a European control over the application of the reforms, suggesting that the three powers should be represented on the permanent Committee of Control, and that the high commissioner charged with the execution of the reforms should be a Christian selected by the powers. The Russian Government declined to support this supplementary demand, and France took the same view as Russia. A British squadron, which had gone to Salonica, was moved on Sept. 28 to Lemnos, at the entrance of the Dardanelles, The attitude of the British Government encouraged the Armenian revolutionists throughout Turkey. Their desperate designs had been shown hitherto chiefly by assassination and terrorism practiced upon their compatriots, who opposed or betrayed them. Garabed, the head of the Protestant community in Marsovan, was murdered on July 1, and the American missionaries were threatened. The American mission school at Tarsus was attacked early in August by a mob of Mussulmans, who maltreated some of the students and threatened the professors. Constantinople several Armenians suspected of being police spies were murdered at different Turkish officer near Erzinghian. Kurds who plundered Armenian villagers in the Mush district were driven off by the Turkish gendarmerie. In eastern Armenia, especially in Bitlis, Erzerum, and about Lake Van, thousands of rifles were hidden away by the revolutionists. In Constantinople the Armenians prepared for an extensive demonstration, and when the patriarch was asked by the Porte to forbid it, he declared he was powerless to restrain his country-men. Nearly 3,000 assembled at the cathedral on Sept. 30, and, in spite of the warning of the patriarch, who told them that they were breaking the laws, attempted to march in procession to the Sublime Porte to present a petition. The police broke up the procession and arrested many, but they gathered at another point There Servet Bey, at the head of a body of gendarmes, commanded them to disperse and leave

their petition with his the constitution of the live ethics, and mone fired jurity wet her and another officer. I was after the police had driven but a his training again in the following evening to be as as a garmin the following evening to be as as a garmin the following evening to be as as a garmin to the following evening to be as a garmin to the following evening to be followed as a fight. Many who were arrested corried recovered and brives of uniform pattern showing that the affair was organized by the resistance were also of one form, indicating that there have were also of one form, indicating that there have were arrested.

Immediately after the retamboul rade the multan dismissed Said Pacha, and made Konord Pacha Grand Vizier on test. 2. read Pacha became Minister of Foreign Affairs. The permittence of the Armenians of Standard in remaining in their churches prolonged the excitement and spread alarm in the provinces. The process therefore, on Get. 9, drove them out and closed the churches. Sir Philip Currie the British ambassador, urged on the new Grand Vizier the necessity of premptly accepting the whole scheme of reform. Austria Hungary Germany and Italy joined the other three again or proven in an identical note demanding previous as

for public safety.

The Moslem population to Asia M .. r were stirred to fury by storses of the tometan to pasriote. Turks, Circuss and, hur a and Laure, whether living in the country districts or in towns, hate the Armenians, because they are the successful merchants and farmers I the one try, almost the only possessor of a would and refunction. and in the towns the complete spoliation of the Armemans for their object. A revolutionary party that sprang up among the Turks added to the anarchy and terror. Threats were uttered against the Sultan and against Hassan Pasha, Minister of Marine, who was the chief representative of the Old Turkish party. In the provinces where the Armenians were most numerous, and where they were provided with arms smuggled in from Persia and Russia, they did something to provoke the attacks. At least the Turks accused them of killing a Moslem priest at Erzinghian, of assaulting worshipers in the mosques of Bitlis, and of beginning the disturbance at Baiburt by firing upon the Mussulmans. At Marash and Zeitun also they were said to have attempted a revolu-

ness of the metropolis was thrown into confusion, and dishonored notes and drafts accumulated in such numbers at the end of two weeks that on Nov. 2 the Porte, in order to prevent a financial crash, proclaimed a moratorium for four months. To precipitate a panic Armenians had organized a run on the Imperial Ottoman Bank, but that bank and some other strong institutions refused to take advantage of the moratorium.

A commission was appointed for the execution of the reforms in Armenia, of which Shefik Effendi was made president. The six powers renewed their demand for the restoration of order throughout the empire. After the Trebizond massacre the reserves were called out, and now the members of the Redii were summoned

TREBIZOND, SCENE OF AN ARMENIAN MASSACRE.

tion. They were accused of attacking the palace of the Vali, and were certainly prepared to fight in Erzerum, where riots occurred on Oct. 30, in Whith 800 Armenians lost their lives. There is at the plundering and shooting was done by matthew Turkish soldiers, though Shakir Consord Raouf Pasha, the Vali, and his officious II that they could to preserve order. The attrices of Diarbekir reported that they suited all that they could to preserve order. The attrices of Diarbekir reported that they suited all the Armenians assumed the attrices of the Armenians assumed the attricts of the Mohammedans to prayrous were all armed, and in the 14 to O Mussulmans.

phosphare in Constantinophosphare in the phares of business. We are their places of business. We are tried any dealings was stopped at the commercial busi-

In the remote districts the massacres continued, and in some places Greeks and Maronites were attacked as well as Armenians. The excitement extended into all parts of Anatolia and into Syria and Mesopotamia. belief gained ground among Moslems that the Sultan had sanctioned the extermination of the Armenians, when Kiamil Pasha, who had been appointed Grand Vizier in deference to the powers, was summarily dismissed on Nov. 6, and sent away to Aleppo, and Halil Rifa Pasha was appointed to succeed him. Tevfik Pasha was made Minister of Foreign Affairs; Said Pasha, President of the Council; Abdurrahman Pasha, Minister of Justice: Memduh Pasha, Minister of the Interior; Gareid Pasha, Minister of Worship; Zuhdi Pasha, Minister of Education; Mehmed Djelal Eddin Raba, Minister of Commerce and Works; Sabri Bey, Minister of Finance; and Aurifi Pasha, a minister without a portfolio. This was regarded as a reactionary Cabinet, formed to please the part of the Mohammedan

population that was opposed to reforms. The liovernment was so helpless and disorganized that the ministers no longer possessed authority control. The Sultan distrusted his official advisers and was guided only by the advice of officials of the palace, who played upon his fears and intrigued one against another. Hevolution was rife among the Moslems as well as among the Armenians. Spies and informers were everywhere. Citizens suddenly disappeared, and officials were arrested or disgraced without One officer of the palace presented a memorial to the Sultan pointing out the eviland dangers of his capricious autocracy, but he as dismissed and tried by court-martial as a traitor. Many Softas and religious men were filled with the spirit of revolution, and these were the most dangerous enemies of the men in power, for they plotted the deposition of the Sultan and the cleansing of the public service. The Young Turkey party was not ready for revolution, because it was not agreed on principles and aims. Faithful Mohammedans wanted a w Sultan and a thorough purification of the Government in accordance with the religious laws, and hoped thereby to deliver Turkey from the military, political, and financial domination of Europe. But an equally strong element appealed to Moslems and Christians to join to ther to limit the autocracy of the Sultan and the powers of provincial administrators and advance toward a representative system of governent. Seditious placards threatening the deposition of the Sultan were posted in the capital, and revolutionary circulars were distributed in streets and houses and even in the Yildiz Kiosk. The police had begun, after the riot of Sept. 30, to deport suspected Armenians to the ovinces. After revolutionary ideas manifested nselves among Mohammedans, Softas and others were arrested and sent away without publicity, and many were believed to have been retly executed.

In the district of Zeitun the Armenians rese in open revolt against the Government. They captured the strong position of Chikur Hissar, compelling a battalion of regular troops to surrender, but were afterward expelled. The Kurds and Turks fell upon the defenseless Armenian communities of the neighboring regions with more relentless fury. On Nov. 6 they killed 3,000 at Arabkir; 250 were slain in Malatia and massacres occurred at Tokat, Amasia, Gemerk, Egin, Zileh, and Selert. On Nov. 10 they butchered 3,000 at Gurun. Soldiers joined in the sacking of the Armenian quarter in Harjatica. Nov. 11, when 1,000 were killed, also in the

massacre of 1.200 Array . 12. On News, 15 the Marile was nated by the contagnous Mutessarif, who three himself in ? rifles. On the same day the Told: riot at Marash, where 125 Armenhane were In Harput the houses of American more coal or were lasted and buildings burned and in No rash the schools of the American mission were destroyed. Before the end of the month the Turkish treeps had restored order, or the Armsnians had been wiped out in most of the places peopled by them in Armenia and Kurdataa. Nov. 30 the Circumstante and Turke billied 1,000 Armeniane at Kaisarich. As many so 2,500 Armenian villages are supposed to have been destroyed and a majority of the male page ulation killed, while in the towns the victime were estimated at 20,000. A great number of women and some of the men embraced Mo-hammedanism to escape death. There were talieved to be 275,000, half of the agricultural population, left starving, half maked, and shelterless, and of these two thirds were weamen and children. In the towns 75,000 were left destitute. The authorities accessed the Armenian revolutionists of beginning the disturbance is Swas, Arabkir, and other places, and requested that a large number of explosive beasts were found in their houses. No revolutionary astempt was made, however, until the Kards had raided the country districts, driving off the sheep and cattle, and were beginning to pollage the towns. From the beginning of Consider Mohammedans in all the six provinces of Armsnia threatened a general massacre of the Asmentana, who sent piterso messages implisting protection to the governors, to the Porte, to the patriarch, and to the foreign embassion. Seriam and other Christians, breader the Gregorius Armenians, were not threatened and were wishen. molested, and in every district Mediamondana of the better class endeavored to man the Armsnians from destruction. After the ravages had been stopped, the Government fed the survivoes in the cities with bread; in the devidated farms ing districts they lived in caves and temperary buts with nothing but reads and heaven to shap their hunger. Although order was presurved in the vilavets of the Armenian plateau, except for occasional lawless acts of desperate Assumiana, the Kurds of the wathern mountains were see subdued nor checked in their depositations. In Van, Bitlis, and Aleppe the devastation of As-menian villages continued till the end of the year. A mamacre was reported from Ortale, where Kurdish Hammitele and Budowine were raid to have elaughtered \$,000 Armenian and Chaldean Christians on Dec. 26 and 28.

The powers could not agree upon any form of active intervention to stop the minimizers. The Hussian ticeventions to stop the minimizers. The Hussian ticeventions differential that the Armenians for their residutionary comprises and alternated upresenge had provided the temperature and after the Mohammerlans. The six powers seems blod an ensurous first of war ships in the waters of the Levant, as if to correr Turker, but the exception was restricted to each are permission to have a second trend at the ringle, which for three weeks the Sulternation.

but finally granted on Dec. 10. During this time the situation was complicated by the flight of Said Pasha, who, after declining to accept the Grand Vizierate again, took refuge at the British embassy, and would not obey the summons of the Sultan, as though he feared death or imprisonment. For five days he persisted in his determination to leave the country, but was persuaded on Dec. 9 to return to his residence, having received assurances of his safety from the

Sultan.

The Armenian insurgents of Zeitun plundered and burned the villages of Bechau, Gukasdurtet. Ghudji, Oequeatur, Kerim, Demerel, Sarikeu-churk, Chukur Hissar, and Keban, and the town of Denderine. They killed 266 Mohammedans. On Nov. 13 a force of Armenians, commanded by a Russian Armenian, captured the fort held by Turkish troops at Zeitun, using dynamite in the attack with great effect. The Turkish military authorities ordered 20,000 troops to advance upon Zeitun from the nearest posts. Amnesty and protection were offered to the rebels if they would surrender their arms and their leaders. The people of Zeitun, who are the most warlike of the Armenians, brigands by profession, had always maintained their independence until the Turkish fort was built in 1878. Notables were sent from Aleppo to persuade the rebels to surrender. The Turks threatened to bombard and destroy the town. On Dec. 24 the besieging forces advanced, and, when the insurgents had answered with defiance a final summons to surrender, attacked the place, but were worsted and compelled to retreat. The combatants, however, subsequently evacuated the town after the women and children had escaped to the mountains. They removed their guns to a higher point that dominated the Turkish position and protected the villages of the valley. The ambassadors intervened to save the Zeitunlis from the destruction that was threatened when the Turks overcame their resistance. By arrangement with the Porte European consular officers were sent to Zeitun to negotiate terms of capitulation.

Revolt of the Druses.—On Dec. 1 a Turkish force of 1,500 men encountered a body of Druses of Mejdel-esh-Shams who were carrying on war with the Circassians settled in their vicinity and with a neighboring Arab tribe.—The Arabs had

lured the Druses into an ambuscade set for them by the Circassians, and they were already losing, when the Turkish troops arrived and put them to flight. The Circassians burned 20 of their villages, killing women and children. The Druses lost 150 killed. Their brothers of the Lebanon set out to go to their aid, but were stopped by Turkish troops that were sent in force into the district to put a stop to the fighting, and also to compel the Druses to accept military service and to pay the taxes that were in arrears for sixteen years. There was a severe encounter on Dec. 21, in which the Turkish artillery and infantry swept away the Druses by hundreds.

Outrage at Jiddah.—On May 30 William S. Richards, British consul; Abdur Razzak, British vice-consul and consul for Sweden and Norway; C. Brandt, Russian consul; and E. Dorville, French consular secretary, were attacked outside of Jiddah, the port of Mecca, by 8 Bedouins, who killed the British vice-consul and The ambasdangerously wounded the others. sadors demanded an indemnity and the punishment of the guilty parties, and the English, French, and Russian governments sent war ships to Jiddah. The Shereef of Mecca and the Vali of the Hedjaz held an inquiry. The Bedonins were angered by the quarantine measures adopted for the Mecca pilgrimage, especially the fencing and guarding of the wells reserved for pilgrims. They destroyed the cholera hospital at Jiddah and expressed general satisfaction at the murderous attack on the consular representatives. The ambassadors demanded that the Bedouins be disarmed, but the Porte knew of no way to do that.

Revolt in Muscat.—Insurgent Bedouins under Shaik Syed Sule captured in February the town of Muscat and the palace of the Sultan, who fled to the forts and opened fire upon the town, demolishing many buildings. The Sultan's forces invested the town, but could not recapture it, for the rebels, though numbering only 350 men, were armed with Martini-Henry rifles, while the Sultan's troops, numbering 2,500, had obsolete weapons. The Sultan finally offered a ransom of \$16,000, and the rebels evacuated the place in the middle of March, after first sacking the palace and the shops.

associations; local conferences; the National Alliance of Unitarian and other Christian Women, and its local branches; the Unitarian Sunday-school Society and local societies of similar character; and 3 ministerial associations. Unitarian theology is represented in the Divinity School of Harvard University, and the Meadville Theological Seminary, Meadville, Pa, is a Unitarian institution. Four academies are named in the "Yearbook," and numerous Unitarian clubs and special societies.

The British Unitarians have 279 churches in England, 33 in Wales, 8 in Scotland, and 36 in Ireland. They are represented in the British and Foreign Unitarian Association and the National Conference, which meets every three years.

The 60,000 Unitarians in Hungary have more than 100 churches with settled pastors, and 50 or more filial churches, with a bishop, Joseph Ferencz, 8 rural deans, and an ecclesiastical

council of 350 members.

Unitarian or Liberal Christian principles are represented in the Protestanten Verein of Germany, the Protestanten Bond of Holland, by a minority of Protestants in France, in the libral congregations of the Spanish Evangelical Church, by a number of societies and by liberal Christians in the State Church of Sweden, in the Free Christian Association of Switzerland, and at several places in India and in Japan, where iderable missionary work has been done,

The sixteenth triennial Conference of Uniarian and other Christian Churches met in Washington, D. C., Oct. 23. In the absence of the president, Hon. G. F. Hoar, Mr. Dorman B. Eaton, of New York, presided. The following revision of the resolutions on Christian unity

was adopted:

Resolved, That this Church accepts the religion of Jesus, holding, in accordance with his teaching, that practical religion is summed up in love to God and ove to man; and we cordially invite to our working bllowship any who, while differing from us in belief, are in general sympathy with our spirit and our prac-

Recolered, That the National Council give the above coloration the widest possible publicity, as a sufficient basis not only for "Christian unity," but also

for the religious unity of the world.

A feature of the proceedings was the presenation of the Unitarian position on certain religious and theological questions from the various points of view of the several speakers. The Rev. George Bachelder, having presented in the opening address a survey of the history of the organization, said that Unitarians are not agnestics, but believe in the doctrine that righteousness is salvation, and that all the law is summed up in love to God and love to man. The Rev. Dr. Furness, of Philadelphia, declared that miracles are but violations of natural laws, out of harmony with all known or probable truths, and believed in by no one of education. The Rev. Charles C. Dean, of Harvard Theological School, affirmed that Unitarians who accept part or all of the New Testament stories of the miraculous see in them manifestations of higher laws instead of a breaking through of all laws. Unitarians like to speak of God as the Father revealing himself in the order of beauty of the universe, and believe that in the future life there will open to every soul the highest possibilities for which it is fitted. The Rev. Mary A. Safford interpreted the "doctrine of forgiveness" as not setting aside the law of consequences, but making us feel that in spite of sin God loves still. The Rev. William C. Gannett held that God had appeared to man in many lands and many forms, of which the Christian incarnation marked the culmination. Resolutions were adopted declaring the need of the purification of politics, condemning the liquor traffic, and expressing sympathy with the Armemans and invoking the intervention of the powers to secare better Government in Turkey

The meeting of the British and Foreign Um tarian Association, held in London in May, was

cester, near Freetown, were recommended. The opening of a mission in Japan was decided upon, to which 4 native Japanese educated in the United States have been appointed. The corresponding secretary of the board has been deputed to Japan to superintend the beginning of the mission. The most important feature of the year's work in the home-mission field was the extension of the Church in Tennessee and other parts of the Southern States, where a mission conference had existed in East Tennessee for several years. Two new presiding elders' districts had been formed, more than 20 ministers received, and more than 1,000 members gathered in. Appropriations of \$37,147 were made for the missionary work of the ensuing year.

UNITED STATES OF AMERICA, a federal republic of 45 States in North America. The executive power is vested in a President elected for four years by electors equal in each State to the number of its Senators and Representatives in Congress, Candidates for President are nominated in party conventions, and each party presents to the voters a list of electors who will vote for its candidate. The legislative power is vested in the Congress, consisting of a Senate, in which each State is represented by 2 members, elected for six years by the State Legisla-ture, and a House of Representatives, consisting of 356 members, elected for two years by direct vote of the qualified electors of each State, 1 from each Congressional district, and 4 Territorial delegates. The reapportionment based on the census of 1890 gives one Representative to every 173,000 inhabitants. The Vice-President, who on the death or retirement of the President becomes President for the remainder of the term, is ex officio the presiding officer of the Senate. The President for the term ending March 4, 1897, is Grover Cleveland, of New York, born March 18, 1837. The Vice-President is Adlai Ewing Stevenson, of Illinois.

The President's Cabinet at the beginning of 1895 was composed as follows: Secretary of State, Walter Q. Gresham, of Indiana; Secretary of the Treasury, John G. Carlisle, of Kentucky; Secretary of War, Daniel S. Lamont, of New York; Secretary of the Interior, Hoke Smith, of Georgia; Secretary of the Navy, Hilary A. Herbert, of Alabama; Postmaster-General, Wilson S. Bissell, of New York; Attorneyteneral, Richard Olney, of Massachusetts; Secretary of Agriculture, Julius S. Morton, of New York; attorneyteneral, Richard Olney, of Massachusetts; Secretary of State, and In Harmon, of Ohio, into the Cabi-Mr. Olney's place as Attorney-General results of Mr. Signal, William W. taxation on the interest therefrom operates on the power to borrow before it is exercised, and has a sensible influence on the contract, and therefore such a tax is a tax on the power of the States and their instrumentalities to borrow money, and consequently repugnant to the t'onstitution. On the question whether the whole act was unconstitutional, no opinion was then expressed, the court being equally divided, Justice Jackson not being present. Dissenting opinions were delivered by Justices White and Harlan, also one by Justice Field, who held the whole act to be null and void. A petition for a rehearing was allowed, and the cases were again argued before a full bench, and were decided May 20, 1895. The opinion of the court was delivered by Chief-Justice Fuller, declaring the whole act unconstitutional on the ground that the tax was a direct tax, and was not laid by apportionment as required by the Constitution. Justices Harlan, Brown, Jackson, and White each delivered a dissenting opinion, showing that the court had stood 5 to 4 against the law. This decision deprived the Government of an estimated revenue of about \$30,000,-000 annually. It overrules a decision of the same court in the case of Springer vs. United States (1880), affirming the constitutionality of the previous income-tax law. In that case the income tax was held in a unanimous opinion to be an excise tax instead of a direct tax and constitutional, Congress having power to lay and collect excises, the only restriction upon its power in this regard being that they shall be uniform throughout the United States.

The aggregate amount collected under the previous income-tax laws (the acts of July 1, 1862, and subsequent amendatory acts which expired by limitation Dec. 31, 1871) was \$346,967,-338.12. The largest amount collected in any one year was \$72,982,159.03 (1866). No incometax laws were passed by Congress prior to the

civil war.

Oleomargarine Case,—The case of Plumley vs. Massachusetts, decided Dec. 10, 1894, involved the constitutionality of the statute of Massachusetts which prohibits the sale of oleomargarine unde in imitation of vellow butter produced from unadulterated milk or cream, in its application to sales of oleomargarine in original packages brought into Massachusetts from other States. It was held that the prohibition in question did not interfere with the freedom of commerce among the several States, and was not resign and to the Constitution. A dissenting opinious was delivered by Chief-Justice Fuller, in the listices Field and Brewer concurred.

Action Antitrust Act,—This act was fourther case of United States vs. E. C. Control which which was decided Jan. 21.

In on was brought by the United bridge caut for the eastern disciplated in the court for the eastern disciplated in the Circuit Court of States Supreme Court of States Supreme Court of States Supreme Court in the court, dismissing the Court of States Supreme Court of States Supreme Court in the court, dismissing the Court of States Supreme Court of States Supreme Court in the Court of States Supreme Court of States Supreme Court in the Court of States Supreme Court of States Supre

trust act "-which denounces "every contract, combination in the form of trust or otherwise. or conspiracy in restraint of trade or commerce among the several States or with foreign nations. and prescribes punishments and remedies-has no application to such a combination or monopoly as the Sugar Trust, because that combination or monopoly is engaged primarily in manufacturing, and only secondarily in selling; that a combination to control the manufacturing of a particular article can not be a combination in restraint of interstate commerce such as is within the power of Congress to regulate, but is merely a matter of domestic concern, subject to the police power of the States. Justice Harlan dissented.

The Debs Case.—This case, which was decided May 27, 1895, came before the court on a writ of habeas corpus. The sentences of imprisonment in the county jail for terms varying from three to six months, imposed on Eugene V. Debs and three other persons for contempt in disobeying the orders of injunction issued by the circuit court at Chicago during the great railroad strike in July, 1894, were upheld, and principles of great importance were established. The jurisdiction of the courts to issue and enforce injunctions against interference with interstate commerce and the passage of the mails was fully maintained. The circuit court having full jurisdiction in the case, it was held that its action was not open to review by the Supreme Court on habeas corpus.

Chinese Exclusion.—In the case of Lem-Moon-Sing vs. United States, decided May 27, 1895, the court affirmed the decision of the court below in denying a writ of habeas corpus applied for by a Chinese merchant in San Francisco, who made a visit to his native land, and was denied admission into the United States on his return. The constitutionality of the Chinese exclusion act was reaffirmed, and it was held that, under the act of Aug. 18, 1894, the courts had no authority to review the decision of the executive officers of the Government in excluding, under any law or treaty, aliens from admission into this

country.

Foreign Judgments.—Hilton vs. Guyot involved important questions relating to the effect of foreign judgments. The action was on a judgment recovered in a French court by French citizens against the firm of A. T. Stewart & Co. It was held that foreign judgments were prima facie evidence and not conclusive when sued upon in the courts of this country. Chief-Justice Fuller and Justices Harlan, Brewer, and Jackson dissented, holding that the doctrine of res ajudicata applied to foreign judgments as well as domestic.

The Army.—The United States army, which is recruited by voluntary enlistment only, consists of 25 regiments of infantry, in 1895 numbering 877 officers and 13,125 men; 10 eavalry regiments, numbering 432 officers and 6,170 men; 5 regiments of artillery, numbering 280 officers and 4,025 men; and 537 officers and 2,386 men in the Engineer Corps, the ordnance department, hospital service, signal service, Military Academy, with Indian scouts, administrative details, etc.; total, 2,126 officers and 25,706 men. (See National Guard, page 504.)

The Navy .- The United States navy contains 6 battle ships, all of the first class. The 2 oldest ("Maine" and "Texas"), launched in 1890 and 1892, displace respectively 6,648 and 6,300 tons, being protected each with 12-inch armor, and making 17 knots an hour, with engines of 9,000 horse power for the heavier sessel, which carries 4 10-inch guns in 2 turrets, with 6 6-inch and 8 6-pounder quick-firing gune; with 7 torpedo ejectors, and 8,000 horse power for the other, which is armed with 2 12-inch guns, one in each turret, and 6 6-inch guns and 12 quick-firing 6-pounders, and has 4 torpedo tubes. Three sister ships ("Oregon," "Massachusetts," and "Indiana"), of 10,200 tons, launched in 1892 and 1893, have 18 inches of armor plating and engines of 9,000 horse power, developing a speed of 15 knots, and carry their 4 13-inch guns in 2 main turrets and 8 8-inch guns mounted in pairs in smaller turrets, with a minor armament of 4 6-inch and 20 6-pounder quick-firing guns and 7 torpedo ejectors. The newest ("lown") has a displacement of 11,296 tons and 15 inches of armor, with 11,000-horsepower engines, designed for a speed of 16 knots, and an armament disposed like that of the others, consisting of 4 12-inch, 8 8-inch, 6 4-inch. and 20 quick-firing guns, with 7 torpedo ejectors, Two armored cruisers (" New York " and " Brooklyn"), of 8,200 and 9,270 tons, with side armor 10 and 8 inches thick respectively, besides steel decks, are designed for speed, the one 21 knots, with engines of 17,400 horse power, and the other, with 16,000 horse power, 20 knots, and carry 8-inch guns, 2 forward and 2 aft in inclined turrets, and 1 on either beam in the former, while the other will have 2 additional heavy guns, with a subsidiary armament of 12 4-meh and 12 smaller quick firers on the one, and 12 5-inch and 16 smaller ones on the other. Two commerce destroyers ("Columbia" and "Minneapolis"), of 7,375 tons, carrying 1 8-inch gun, with 2 6-inch, 8 4-inch, and 16 smaller quick firers, have made 22.8 and 23 knots respectively. with engines of 20,000 horse power, and can carry coal for a cruising radius of 26,000 miles. A smaller deck-protected cruiser ("Olympia"), of 5,870 tons, has a speed of 20 knots and an armament consisting of 4 8-inch breechloaders and 10 5-inch and 20 smaller quick firers. A coast-defense armor clad, with 14-inch plates ("Monterey"), of 4,000 tons, has a speed of 17 knots, and is armed with 2 12-inch and 2 10inch breechloaders and 10 rapid-fire guns. An older vessel, (' Monadnock "), with 11 | inches of armor, classed as a monitor, though having a speed of 144 knots, carries 4 10-inch guns in 2 turrets. The heaviest of the monitors (" Puri-), having 14-inch plates and a displacement of 6,160 tons, has 4 12-inch breechloaders mounted in 2 turrets and a secondary armament of 8 quick-firing guns. The next in strength ("Miantonomah," "Amphitrite," and "Terror") have the same armor as the " Monad nock" and a similar armament. A persential ram, with a speed of 17 knots ("Katabelin") carries only 4 rapid-fire guns, but is capable of being entirely submerged, except the turtle back deck, when attacking. Of the old type of month tors, built during the war of secession, there are 13 ("Ajax," "Canonicus," "Catskill," Co.

Maluja Matau .

Hay	45,321,272	54,574,408	468,578,821

The production of malt liquors in 1894 was estimated at 1.016,440,000 gallons; of fermented liquors, 33,362,373 gallons; of rye whisky, 10,-026,544 gallons; of bourbon whisky, 15,518,349 gallons; of alcohol, 10,570,070 gallons; of rum, 1,864,595 gallons; of gin, 1,287,977 gallons; of pure neutral spirits, 35,377,115 gallons; of brandy, grape, apple, and peach, 2,948,158 gallons; total spirits 99,153,650 gallons.

The number of sheep in 1894 was 45,048,017. The wool product in 1894 was 298,000,000 pounds, and the consumption of wool 346,654,-000 pounds. The number of hogs killed during the year was 21,619,645. The production of to-bacco in 1894 was 406,678,385 pounds, valued at \$27,760,739. The cotton crop in 1895 was 5,073,531 bales, compared with 4,811,265 bales in 1894. The consumption of the United States was 3,219,000 bales. The product of cane sugar was 611,156,922; of beet sugar, 45,191,296; of

maple, 7,633,036 pounds.

The quantity of pig iron produced in 1894 was 6,657,388 long tons, value \$71,966,364; of copper, 353,504,314 pounds, value \$33,540,489; of gold, 1,923,619 ounces, value \$39,761,205; of silver, 49.846.875 ounces, value \$31,403,531; of zinc spelter, 74,004 tons, value \$5,209,882; of lead, 160,867 tons, value \$10,585,048; of quicksilver, 30,440 flasks of 764 pounds, value \$1,095,-840; of aluminum, 220 tons, value \$490,560; of antimony, 205 tons, value \$39,200; of bituminous coal, 117,950,348 tons, value \$103,842,467; of anthracite coal, 52,010,433 tons, value \$80,-879,404; of coke, 8,495,295 tons, value \$12,654,558; of crude petroleum, 48,527,336 barrels of 42 gallons, value \$40,762,962; value of natural gas, \$11,000,000; quantity of evaporated salt, 9,161,053 barrels of 280 pounds, value \$4,608,-275; of rock salt, 2,341,922 barrels, value \$788,-681: of refractory clay, 3,375,738 tons, value \$4,050,885; of kaolin, 24,552 tons, value \$185,-169; of hydraulic cement, 7,895,259 barrels of 300 pounds, value \$4,397,407; of Portland cement, 738,196 barrels, value \$1,080,644; of lime,

56,750,000 barrels of 200 pounds, value \$28,375,000; of gypsum, 287,517 tons, value \$849,925; of copper sulphate, 60,000,000 psounds, value \$2,016,000; of rock phosphate, 952,155 long tons, value \$2,856,465; of white lead, 87,242 tons, value \$8,445,174; of oxide of zine, 22,814 tons, value \$1,711,275; value of roofing slate, \$2,551,259; of marble, \$2,177,280; of precious stones, \$250,000. The total value of metals extracted was \$194,092,119 and of all mineral presimes \$553,352,996. The products of manufacture of all kinds in 1890 were valued at \$9,372,437,283; and the products of fisheries were valued at \$45,312,818.

Railroads,-The total mileage of the railroads of the United States in 1895 was 178,054 miles, or, including side tracks and sidings, 232,-755 miles. The railroads operated, exclusive of elevated railroads, had a total length of 175,444 miles. The number of passengers carried during the year was 583,248,007; tons of freight, 675,129,747. The gross earnings were \$1,080. 305,015, of which \$288,693,073 came from passengers, \$700,477,409 from freight, and \$91,134,-The net rev-533 from miscellaneous sources. enue was \$322,539,276 from traffic receipts, the operating expenses having been \$757,765,739, Other receipts, including rentals, made the total available revenue \$419,016,719. The payments from revenue amounted to \$429,484,953, of which \$237,620,367 were interest on bonds, \$60,-900,454 rentals and tolls, \$7,464,971 interest on floating liabilities, \$38,220,492 miscellaneous expenditures, and \$85,278,669 dividends on stock. The total liabilities amounted to \$11,455,220,-006, including \$5,027,604,717 of capital stock, \$5,605,775,764 of bonded indebtedness, \$383. 927.834 of unfunded debts, and \$438,911,691 of current accounts. The total assets were estimated at \$11,808,425,973, including \$9,693,141,-387 cost value of railroads and equipment, \$238,-306,300 of real estate, stocks, and other investments, and \$225,612,088 of current accounts.

Shipping.—The vessels under the American flag on June 30, 1895, numbered 23,240, of 4,635,960 tons, of which 1,193, of 822,347 tons, were engaged in foreign commerce; 20,382, of 3,728,714 tons, in domestic commerce; 67, of 15,839 tons, in whaling; and 1,598, of 69,060 tons, in cod and mackerel fisheries. There were built and registered during the year preceding 248 steam vessels, of 69,754 tons, and 397 sailing vessels, of 34,900 tons.

Immigration.—The total number of immigrants that arrived during the year ending June 30, 1895, was 279,948; compared with 314,467 in 1894, 502,467 in 1893, 623,084 in 1892, and 560,319 in 1891. The occupations of the immigrants arriving in 1894 were reported as follows: Laborers, 59,575; servants, 28,763; farmers, 16,452; tailors, 3,184; carpenters, 2,934; miners, 2,505; shoemakers, 2,284; clerks, 2,222; professional, 1,738; total skilled laborers, 31,926; miscellaneous, 116,187. Of the immigrants arriving in 1895 there came 219,006 through New York, 25,862 through Philadelphia, and 20,472 through Boston.

Pensions.—The number of pensioners on the rolls on June 30, 1895, was 967,043, drawing \$139,053,892 in pensions, besides 3,484 hring in foreign countries, drawing \$695,353. There were

UNITED STATES, FINANCES OF THE.

The financial operations of the National Government for the fiscal year ending June 30, 1895, though more satisfactory than those of the previous year, still resulted in an excess of ordinary expenditures above ordinary receipts of \$42,805,-223. The receipts from customs for 1895 were more than \$20,000,000 greater than in 1894, but those from internal revenue were \$3,500,000 less. The receipts from other sources remained substantially unchanged; the net aggregate of all receipts showing an increase of \$17,570,715.

The following tables show the principal items of receipts and expenditures of the National Government for the two years in question:

RECEIPTS, INCLUDING POSTAL SERVICE.

	YEAR ENDING JUNE 80,

The expenditures for 1895 were \$9,427,332 less than for the previous year. The decrease arose mainly from a great reduction in payments on account of the sugar bounty and a considerable reduction in the expenditures for constructing new war vessels and for general expenses military establishment.

In addition to the ordinary revenue, as shown in the table, the cash in the Treasury was augmented during the year by the receipt of \$58,580 orn account of the sale of \$50,000-000 5-per-cent. bonds (under the act of Jan. 14, 1875); also \$65,116,245 from the issue of \$62,315,400 4-per-cents, for gold purchased, and \$2,470 4-per-cents. issued in liquidation of accrued interest on refunding certificates—in all.

\$123,657,215.

Excepting a comparatively small amount of deposits held in national bank depositaries upon ample security of United States bonds, the Government holds and disburses its own revenues. It also holds in trust a reserve of gold and silver coin and bullion to meet the redemption of its paper issues, a fund to redeem certain national bank notes and the deposits of public disbursing officers, subject only to the check of the respective officers; the whole aggregating, on Dec. 31, 1895, the sum of \$787,578,447, equivalent to nearly half of the monetary circulation of the country. Of this amount, less than \$15,000,000 was in national bank depositaries, and of the entire amount only \$178,027,201 was to the credit of the United States Treasurer and subject to his official checks.

The character of the assets held and the several accounts to which the moneys were credited at the beginning and end of the last fiscal year will be seen by the following table:

ITEMS.	Dec. 31, 1895.	Dec. 31, 1894.

Total	\$787,578,447	\$782,754,290

Of the general Treasury balance Dec. 31, 1895, \$63,262,268 was represented by gold coin available for redemption of United States notes; Dec. 31, 1894, \$86,244,455 was available for like purpose.

The debt of the United States is represented by obligations either with or without reserve. Of the debt without reserve, there has been an

crease during the last calendar year of \$84. 66,363, arising mainly from an issue of \$62,-15,400 4-per-cent, loan of 1925, an increase of 1982,177 in United States notes having no erve, and \$6,875,000 of the 5-per-cents, of 6, and a reduction of \$6,955,716 in the baldue the national bank redemption account. he items of debt with no reserve for 1865

d 1894 will be seen in the following table:

Total	\$1,062,068,198	\$917,994,500	

Of the debt outstanding having a specific rearve, dollar for dollar, there was a decrease uring the calendar year in the amount of fulfed States notes of \$22,982,177, but there as a corresponding increase in the amount of see notes having no reserve. There was also decrease in Treasury notes of 1890 of \$13,-2,444 and an increase in silver certificates of 1,778,000. The following table shows the items:

	OUTSTANDING, DEC. 81,		
CHARACTER OF OBLIGATION,	1895.	1894.	
U. S. notes (greenbacks). Transury notes (1800). Carracey certificates (1872). Card certificates.	\$68,262,265 187,771,280 84,450,000 50,099,859 845,702,504	\$54,944,445 124,628,731 46,965,000 58,420,649 834,934,544	
Total	\$681,285,941	\$676,878,549	

The gold and silver coinage is executed by the ints at Philadelphia, San Francisco, and New rieans, while the minor coinage is confined by we to the mint at Philadelphia. There was a siduction in the value of the gold coinage for to fiscal year ending June 30, 1895, over that the previous year of \$53,541,437; but there meanwhile an increase in that of the silver pinage of \$3,069,480.

There is no legal limit to the deposits of gold at the mints can receive for coinage; but institutions have no authority to receive n the public deposits of silver, except such sure purchased by the Treasury at market rate subsidiary coinage. The repeal of the au-sority to purchase silver bullion to be paid for the issue of Treasury notes (act of 1890) did take away the authority to coin the bullion purchased into silver dollars as might be ary to redeem the notes, and out of such rchases there were coined during the last fiscal ar 8,956,011 silver dollars, costing \$2,680,825. as yielding a profit of \$1,275,186. Most of subsidiary coinage was the refabrication of d, worn, and mutilated coins unfit to be re-

Of the national banks, there has lever a fe crease during the year of 45 in names of \$11 000,000 in capital stock, of \$31,000,000 to go ad coin and certificates, and of \$2; manger at trans States notes. The total of bank teder entriesed ing has increased meanwhile by \$10,000,000. The following table shows the aggregate re-

sources and liabilities of the banks in detail at

UNIVERSALISTS. The statistical tables in the "Universalist Register" for 1896 give this denomination 44 State conventions, 1,009 parishes, 48,030 families, 802 churches with 47,986 members, 967 Sunday schools with 56,394 members, and 834 churches with property valued at The 13 universities, colleges, theo-89,759,037. logical and medical schools, and academies return 165 professors and teachers, 1,524 students, and property valued at \$2,787,500. The 12 funds under the care of the General Convention amount in the aggregate to \$263,979. Associated with the General Convention are the Womans' Centenary Association or National Missionary Selety; the Young People's Christian I mum, with 425 affiliated and 8 unaffiliated soon this; and the Universalist Historical Society. athen has a library of about 4,000 volumes, beate- uportant manuscripts and papers.

In Universalist General Convention met in Markey, Laure, in October. Statements were provided in an address by the Hon, Henry B. Markey and that the value of parish propositions for viewthin the past twenty-five years for the first expenses and contributions for solution (1) in the expenses and contributions for solution (2) from \$1,700,000 to nearly \$4,000,000 to nearly \$4,000,000 to nearly \$4,000,000 to nearly \$1,700,000 indebtedness, to first \$15,000,000 to the General and State of the first held by the General and State of the first held by the General and State of the state, is together from \$100,000

to \$690,000. A mission had been founded in Japan, and showed marked power and advance. Contributions had been given during the twenty-five years of \$53,000 to foreign missions, \$47,000 to home missions, \$94,000 to church building, \$63,000 in aid of parish work, and \$184,000 in aid of students. On the recommendation of the Committee on the Revision of the Profession of Faith, the convention voted in favor of the substitution of the following articles for the Winchester profession:

I. We believe in the fatherhood of God, and in the

brotherhood of man.

11. We believe that God, who hath spoken through all his holy prophets since the world began, hath spoken unto us by his son, Jesus Christ, our example and Saviour.

III. We believe that salvation here and hereafter consists in spiritual union with God, who, leading to repentance and life by his spirit, will gather in Christ

the whole family of mankind.

Final action is to be taken on these articles at the next convention, in 1897. It is represented that more churches were dedicated in 1895 than in any previous year of the life of the denomination. The home-mission work has been extended in the South and Southwest. The mission in Japan includes a central church and a theological school at Tokio, 8 churches in important cities, a school for girls, and several mission stations, some of which are under the care of native pastors educated in the seminary. The sum of \$10,000 was voted by the General Convention for carrying on this work in 1896. The meeting of the Young People's Christian Union held in Boston in July was attended by more than 4,000 members.

UTAH, a Western State, organized as a Territory Sept. 9, 1850; admitted to the Union as a State Jan. 4, 1896; area, 84,970 square miles. Population by the census of 1890, 207,905; estimated population in 1895, 247,324. Capital, Salt

Lake City.

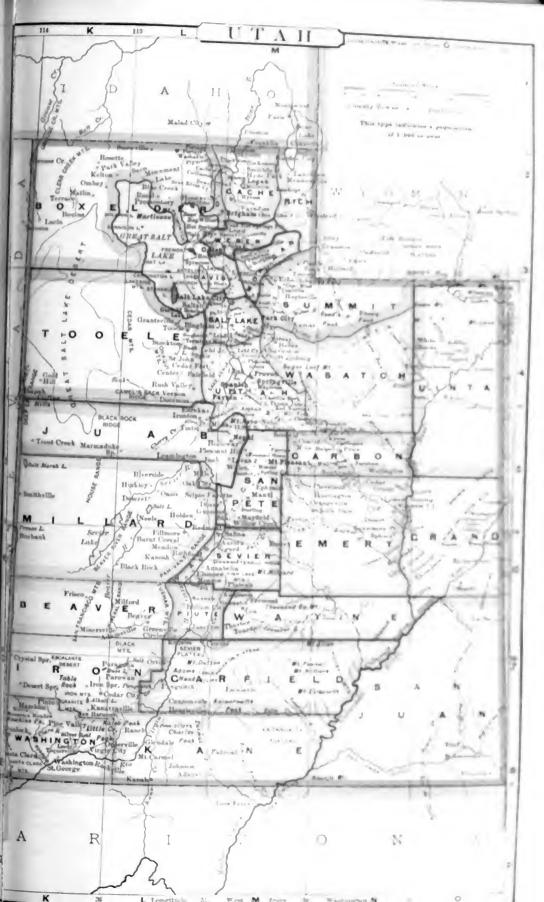

Government.—The following were the Territorial officers in 1895: Governor, Caleb W. West: Secretary, Charles C. Richards; Auditor, John T. Caine; Treasurer, T. W. Whitehead, Jr.; United States District Attorney, John W. Judd: Superintendent of Schools, T. B. Lewis; United States Marshal, N. M. Bingham; Adjutant General, G. M. Ottinger; Fish Commissioner, A. M. Musser—Democrats; Chief Justice of the Supreme Court, S. A. Merritt; Associate Justices, G. W. Bartch, H. W. Smith, W. H. King.

Finances.—The final report of the Territorial Auditor shows that the assessed valuation in 1895 was \$97,983.525, and the amount of tax \$489,917.62. The revenue was \$8,089.16 less than that of 1894. The amount of taxes unpaid at the end of the year was \$93,210.25. The bonded indebtedness is \$700,000, and the total excess of liabilities over resources, including the bonded debt, \$836,713.51. The value of the public institutions and other property which the State receives from the Territory amounts to \$1.679,568.46. The Auditor's estimate of expenses for 1896 is \$364,581.43.

Education.—The school population numbers 74,551. The apportionment in January was \$152,829.53; in March, \$126,695.45; in Decem-

ber. \$225,240,10.

The enrollment at the Agricultural College, at

Logan, the first term of the year was 400, cost of the building and grounds was \$211,947 The expenditure of the past two years on the State account was \$21,861.90. There is a deficit of \$8,930. The Government gives \$26,000 a year

for special purposes,

The number of students registered at the University of Utah, Salt Laske City, for the school year 1895-'96 is 303. The estimated expense for a school year is \$35,000. The appropriations heretofore have not been large enough, and there is a deficit of \$13,950. The value of the buildings and grounds is estimated at \$250,000, Original. ly, the ten-acre square on which the university is situated was given by Salt Lake City under certain conditions, which required that in case the ground should cease to be used for the main buildings of the university, title to the land would revert to the city. In March, 1895, the city council removed this condition, and the only requisite remaining is that the State Univ versity be located within or contiguous to Salt Lake City. In 1894 the United States Government granted to the university a 60-acre tract on the Fort Douglas reservation in Salt Lake County on condition that the institution occupy the site within five years. Thus far nothing has been done toward meeting the requirement.

Public Institutions, - The Pententiary, which passes from the Government to the State, has espacity for 500 prisoners, and is on a farm of 200 acres, 78 of which are under cultivation. There are now 189 convicts. The cost has been

a little over \$40,000 a year.

The Reform School, at Ogden, has 57 acres and 2 buildings which cost over \$100,000. appropriation for maintenance in 1894-'95 was \$15,042.92, and there is about \$6,000 deficit. The first of the buildings, according to the report, was large enough to accommodate at least four times the number of children ever present

The number of patients at the Insane Asylum, at the end of the year was 217, of whom 107 were women. The average during the year was 214. The number of deaths was 15. The average cost of care and treatment per capita was 384 cents daily. The asylum is at Provo. It is a modern and well-equipped building, which has cost, including the 200 acres of land, the furniture, and machinery, \$403,073.91. It can accommodate 250 patients.

The School for the Deaf, heretofore conducted as a department of the university, is to be removed to Weber County, where the School for the Blind will also be placed, according to pro-

visions of the new Constitution.

Industries and Products.—The total namber of industrial concerns in l'tah is placed at 880, the number employed at 5,054, the wages paid at \$2,027,118, the value of raw material used at \$2,610,038, and the value of presluct at \$6,678,118,

The capital invested in commercial integers's is estimated at \$14,551,345, sales at \$32 565 611. wages paid at \$2,785,794, and the number of concerns at 1,964, with 5,023 employed. The aggregate capital of the banks is \$5,001 stal and

the deposits \$9,689,267.

be on the Tuesday next following the first Monday in November, and the terms of officers elected

begin on the 1st of the following January.

The sessions of the Legislature are to be biennial, beginning, except the first, on the second Monday in January next after the election of members, whose terms are two years for members of the House and four years for Senators, except that half of the Senators first chosen shall be drawn by lot to serve two years only. Twenty-five years is the minimum age. Members can not hold any office of trust or profit from the Government or State, or take any that has been created during their terms; they shall be privileged from arrest during the session, for fifteen days before and in returning, and shall receive not more than \$4 a day and mileage not to exceed 10 cents a mile. No regular session except the first shall exceed sixty days in length, except in cases of impeachment, and no special session last more than thirty days. House shall have the power of impeachment by a two-thirds vote. Private and special legislation is prohibited in 18 cases.

Legislation is also prohibited releasing obligations to the State or to municipal corporations therein; authorizing lotteries, etc.; delegating power to make or interfere with municipal improvements and the like; granting extra compensation to officers, etc., except in the case of charges incurred by public officers in the execution of the laws; and from authorizing the State or any county, city, town, township, district, or other political subdivision of the State to lend its credit or subscribe to stock or bonds in aid of any railroad, telegraph, or other private individual or corporate enterprise or undertaking.

The Executive Department shall consist of Governor, Secretary of State, State Auditor, State Treasurer, Attorney-General, and Superintendent of Public Instruction, each of whom shall hold his office for four years, beginning on the first Monday in January next after his election, except that the terms of office of those elected at the first election shall begin when the State shall be admitted into the Union, and shall end on the first Monday in January, A. D. 1901.

In case of the death of the Governor, or disability from any cause, the Secretary of State shall be acting Governor; and if he also is unable to perform the duties of the office, they devolve upon the President pro tem. of the Sennte.

The Governor, Justices of the Supreme Court, and Attorney-General constitute a Board of Pardotes; the Governor, Secretary of State, and And they General, a Board of State Prison Commissioners; the Governor, State Treasurer, and Austria, a Board of Insanc-asylum Commissurveys; and the Governor, Attorney-General, and superintendent of Public Instruction, a Paril of Reform-school Commissioners. for a are he go into the treasury.

The Supreme Court is to consist of 3 judges, but may be the reused to 5 after 1905. term after the first, shall be six years. There are for the present 7 judicial districts. The office of it hate ridge is abolished. The State is divided for the present into 27 representative and 12 wnatonal districts.

The article on education provides that

The public-school system shall include kindergarten schools; common schools, consisting of pr mary and grammar grades; high schools; an agri-cultural college; a university; and such other schools as the Legislature may establish. The general control and supervision of the public-school system shall be vested in a State Board of Education, consisting of the Superintendent of Public Instruction and such other persons as the Legislature may provide. Neither the Legislature nor the State Board of Education shall have power to prescribe text-books to be used in the common schools.

The metric system is to be taught; religious tests are forbidden, and "neither the Legisla ture nor any county, city, town, school district or other public corporation shall make any appropriation to aid in the support of any school, seminary, academy, college, university, or other institution, controlled in whole or in part by any Church, sect, or denomination whatever."

Corporations for municipal purposes shall not be created by special laws, but the Legislature shall provide by general laws for the incorporation, classification, and organization of towns in proportion to population. Cities are prohibited from selling or leasing waterworks or sources of supply owned or controlled by them, except that they may exchange them for others of equal value.

No railroad corporation shall consolidate its stock, property, or franchise with any other railroad corporation owning a competing line,

The rolling stock and other movable property belonging to any other railroad company or corporation in the State shall be considered personal property, and shall be liable to taxation and to execution and sale.

No corporation or association shall bring any armed person or bodies of men into the State for the preservation of the peace or the suppression of domestic troubles, without authority of law.

The stockholders in every corporation and joint stock association for banking purposes, in addition to the amount of capital stock subscribed and fully paid by them, shall be individually responsible for an additional amount equal to the amount of their stock.

Combinations to control prices are prohibited, and corporations violating this section may be deprived of their franchises.

It is made a crime for any corporation or agent of a corporation to interfere maliciously with the obtaining or retaining of employment by any person.

The article on revenue and taxation provides that a deduction of debts from credits in assessments may be authorized, and exempte public property, property used exclusively for religious worship or charitable purposes, and places of burial not used or held for private or corporate benefit. Ditches and canals are not to be separately taxed when used exclusively for irrigating the property of the owners. claims and mines are to be taxed at the price paid the United States therefor, except when the surface is used for other purposes; machinery, etc., is to be taxed at its value. The rate of taxation shall not exceed 8 mills on the dollar; when the taxable property shall amount to \$200,000,000, it must not exceed 5 mills, and

never exceed 4 mills after the valuation reaches \$300,000,000, unless permission is granted by vote of the electors who paid a property tax the

year preceding the election.

Until otherwise provided by law, there shall be a State Board of Equalization, consisting of the Governor, Auditor, Treasurer, Secretary of State, and Attorney-General; also in each coninty a county board of equalization, consisting of the board of county commissioners.

Nothing in the Constitution shall be construed to prevent the Legislature from provid. ing a stamp tax, or a tax based on income, occupation, licenses, franchises, or mortgages,

The militia shall consist of all able-budged male inhabitants between eighteen and forty-flye

not exempt by law.

The Legislature is to provide for a Board of Labor Conciliation and Arbitration, and to prohibit

1. The employment of women, or of children upder the age of fourteen years in underground mines.

2. The contracting of convict labor.

3. The labor of convicts outside prison grounds.

except on public works under the direct control of the State

4. The political and commercial control of emplovees.

The exchange of black lists by railroad companies

or other corporations is prohibited. The right of action to recover damages for injuries resulting in death shall never be abrogated, and the

amount recoverable shall not be subject to any statutory limitation. The Legislature shall provide for the selec-

tion, by each head of a family, and exemption of a homestead, which may consist of one or more parcels of land, together with the appurtenances and improvements thereon, of the value of at least \$1,500, from sale on execu-

Women retain their property in their own right after marriage, and it is not to be liable for the debts or obligations of their husbands.

Political.-The Republican convention to nominate officers for the State in 1896 was held in Salt Lake City, Aug. 28. The platform pledged the party in Utah to work for the remonetization and free and unlimited coinage of silver at the ratio of 16 to 1; favored protection; condemned the bond issue; condemned the administration for failure to open the Uintah and Uncompangre reservations to settlement; favored the cession of unsold nonmineral lands to States and Territories for aid to irrigation and public schools; favored fixed salaries for public officers; demanded economy in governmental expenditures; approved the proposed State Constitution; demanded that the real estate belonging to the Mormon Church be returned to it; congratulated the women of Utah on the right of suffrage granted; condemned the fereign policy of the national Administration; and concluded:

Populist, 2,051.

On the adoption of the proposed Constitution, the vote stood: Yes, 31,305; no, 7,687.

VENEZUELA, a federal republic in South America, formed in 1830 by the secession of the former Spanish colony of New Grenada from the state founded by Simon Bolivar. There is a Senate of 27 members, 3 from each State, and a House of Representatives, composed of 63 members, elected by direct popular vote for four years. The presidential term is four years. The President is Gen. Joaquin Crespo. Council of Ministers was composed in the beginning of 1895 as follows: Interior, Gen. J. Ramon Nuñez; Foreign Affairs, P. Ezequial Ro-jas; War and Marine, Gen. Ramon Guerra; Treasury, Fabricio Conde; Public Instruction. Dr. Luís Ezpelosin; Fomento, Gen. Augusto Lutowsky; Public Work, David Leon. The Secretary General was Gen. José Antonio Velutini. During the year Dr. J. F. Castillo became Minister of the Interior; Dr. Lucio Pulido, Minister for Foreign Affairs; M. A. Matos, Minister of the Treasury; Dr. A. Urbaneia, Minister of Public Instruction: Gen. Jacinto Lara, Minister of Fomento; and J. M. Maurique, Minister of Public Works; while Dr. J. R. Nuñez was made Secretary General. In December the Cabinet was reconstructed again, when Ezequial Rojas returned to the Ministry of Foreign Affairs, Enrique Perez became Finance Minister, Bruznal Serra was appointed Minister of Public Works, Federico Chirenos Minister of Instruction, and Tosta Garcia became Minister of Fomento.

The estimated area is 593,943 square miles. The population in 1891 was 2,323,527. The number of foreigners was 42,898. The native ludian population is estimated at 326,000, of whent 240,000 are civilized. Caracas, the cap-

la , and 72,429 inhabitants in 1892.

per-cent, loan, issued July 16, 1894; 5,000,000 bolivars, certificates paying 1 per cent. a month; 67.147,325 bolivars, the foreign debt, paying 3 per cent.; and 4,978,090 bolivars, debt due to Spain, France, and Germany.

Commerce and Communications. - The values of the principal exports in 1894 were; Coffee, 84,769,000; caeao, 9,651,000; gold, 2,884,-000; hides, 2,849,000; animals, 1,142,000 boli-

There were 385 miles of railroad in operation in 1894. The state telegraphs had a length of 3,880 miles. The number of messages in 1894 was 208,965; expenses, 1,080,966 bolivars.

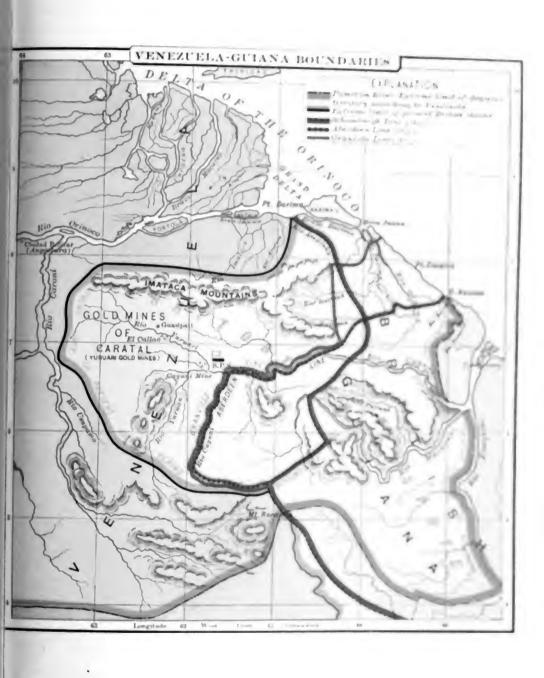

Defense.-By a decree of Aug. 4, 1893, the strength of the army was fixed at 18 battalions, each battalion containing 6 companies of 60 men. The effectives in 1893 numbered 7,280 officers and men. Every citizen between the ages of eighteen and forty-five is enrolled in the national militia. Of this force, 60,000 men have been mobilized at one time. The number of citizens liable to serve is estimated at 250,000.

There is a fleet of 4 steamers and 2 sloop gunboats. To each steamer is attached a company

of marine infantry.

Attempt. - An uprising Revolutionary against the Government of President Crespo, in the interest of Dr. Rojas Paul, was started in the antumn. His most prominent opponents would not countenance a political disturbance at a time when the boundary dispute with England was in so critical a state. The revolution was planned to take place simultaneously in Caracas, and in the States of Bermudez and Lara on the night of Nov. 10. The authorities had been warned, and within an hour most of the leaders were in custody and their followers dispersed. Gen. Yaguaracuto, one of the military chiefs of the revolutionary uprising, was taken to Caracas as a prisoner. Gen. Diaz and Gen. Menendez, members of the council of war, fled to Curaçoa. Four members of the Cabinet who were suspected of complicity were dismissed from office. A few bands of guerrillas under Gen. Amparan and Gen. Platero remained unsubdued in the mountains.

Diplomatic Rupture.—Some of the European diplomatic representatives, impatient at the delay of Venezuela in acting upon their claims for damages due their nations arising out of the revolution of 1892, suggested to their respective governments the organization of a

mixed tribunal to pass upon unpaid claims. Offended at this, President Crespo, in March, 1895, sent their passports to the Belgian and French ministers, the only ones then present in Caracas. Afterward he sought to resume diplomatic relations with France, explaining that the French minister was dismissed as personal non-grata, but it was not till December that the French Government decided to renew relations, requiring as a condition that the same minister be received and an apology rendered. Spain, as well as France, was importunate for payment of these claims. Germany pressed another demand, the payment of the 7-per-cent, guaranteed interest on the German railroad between Valencia and Caracas, and in December sent a

squadron to Venezuelan waters.

Guiana Boundary Dispute,-The first settlements in Guiana, the country north of the Amazon and east of the Orinoco, discovered by Vasco de Nufiez in 1504, or perhaps by Columbus in 1498, were planted by the Spaniards in 1560 along the Orinoco. Spain claimed the whole of Guiana by right of discovery and by virtue of the bull of Pope Alexander 11 dividing America between Spain and Portugal. In 1580 the Dutch, then subject to the Spanish Crown, cotablished a settlement on the Pumeron river, and soon afterward founded one at Wapari. Later still they attempted to settle on the west bank of the Essequibo, but were driven off by the Spaniards. The English under Sir Walter Raleigh sought the gold region, but failed; and in 1630 they attempted to found a settlement at Surinam. The French, with better success, founded one at Paramaribo, and when they abandoned this for Cayenne the English occupied the site in 1652. This territory was ceded in 1667 to the Dutch, who meanwhile had developed flourishing plantations on the Berbice,

Demerara, and Essiquibo rivers. When the Netherlands finally achieved its independence from Spain the Treaty of Munster, signed Jan. 30, 1648, confirmed the right of the Dutch settlers in Guiana to the territories already possessed or colonized, but prohibited them from navigating or trading in the bays or places provided with fortifications, ware-houses, or castles. Notwithstanding the treaty, the Dutch sought continually to establish new posts, which the Spaniards endeavored to break up by armed expeditions. The Dutch traded with the Caribs, who were hostile to the Span-iards. Their posts, from which the Spaniards The Dutch traded ejected them, extended along the coasts as far west as the river Barima, and into the interior on the rivers Essequibo, Cuyuni, Pumeron, Waini or Guaima, and Barima. The West India Company laid claim to the whole coast up to the mouth of the Orinoco. The first Spanish settlement south of the Orinoco was San Thome de Guayana, founded in 1596. No other jermanent settlements were established till after 1723, when Capuchin missions were organized in the district between the Yuruari and the circ noco. The Spaniards traded with the Ind and in the Cuyuni, causing the Dutch West India to anpany in 1730 to issue an edict prohibiting train on the rivers Cuyuni and Mazarutti anyal to their own agents.

The Dutch built forts on Pumer n river and

of preparing for the discussion of the boundary question between Venezuela and England, and not done, as Venezuela seemed to fear, with the intention of indicating dominion or empire. He expressed satisfaction that the colonial authorities at Demerara had not occupied Point Barima: and when Señor Fortique demanded that the monuments set up by Schomburgk be removed the British Government, on Jan. 31, 1842, sent orders to that effect. Sir Robert Schomburgk was directed at the same time to continue the survey, which he completed in 1844. The Venezuelan Government took the ground that all Guiana originally formed part of the Spanish captain generalcy of Venezuela, and that the part ceded to Holland (which Holland had transferred to Great Britain) comprised only the territory settled and ruled by the Dutch, whose westernmost settlements were confined to the banks of the Essequibo, except near the coast, where they extended to the Pumeron river. In 1841 a case came up in the Demerara court, touching jurisdiction over Maroco river, where a murder had been committed, and the court held that that place was within Venezuelan jurisdiction. On July 29, 1843, Lord Aberdeen suggested arbitration of the boundary dispute. In 1844 he offered to accept Maroco river as the starting point of a conventional boundary, which in the interior should follow the Cuyuni river to its source. Dr. Fortique would not concede a more northern boundary than Pumeron river, and his death, in 1844, interrupted the negotiations

Some years later the Venezuelan Minister of Foreign Affairs interrogated the British charge d'affaires as to the rumored intention of Great Britain to build a fort at Point Barima. Belford Hinton Wilson replied that his Government had no intention to occupy or encroach upon the territory in dispute, and expected the Venezuelan Government to instruct the local authorities in Guiana to refrain from taking measures which the British authorities might justly regard as aggressive, and which would lead to a collision. In response to his request and formal declaration, made under instructions, that "Great Britain has no intention to occupy or encroach upon the territory in dispute," the Venezuelan min-ister, on Nov. 18, 1850, entered into a mutual engagement with him to treat such territory as neutral and inviolate pending a settlement.

Owing to the civil war in Venezuela, boundary negotiations were not resumed till 1876. Venezuela then offered to accept the Maroco line that Lerd Aberdeen had proposed, but this offer was rejected by Lord Salisbury. An alleged towal demonstration at the month of the Oritical formed the subject of a letter from the Venezuelan minister in Washington, dated Dec. 21, 1879, to whith Mr. Evarts, Secretary of State, et day, at 1880, replied: "I have to inform you that it year of the deep interest which the Government of the United States takes in all transactions to the United States takes in all transactions to the United States takes in the Covernment of foreign powers upon the territory of any of the repulsions of this continent, this Government could in at leak with addifference on the foreible acquisition of some territory by England."

In 1881 Lord Granville offered to Venezuela a boundary line beginning 29 miles southeast of

Point Barima, thus resigning all territorial claims over the mouth of the Orinoco. Inland it followed the upper course of Cuyuni river, like the Aberdeen line. This proposition, being less favorable to Venezuela than the previous one, was refused, and the boundary question did not come up again till 1882, but the discussion became acute after gold had been discovered, in 1883, on one of the affluents of Mazaruni river, and miners began to flock into the country.

Venezuela concluded in 1882 that the only solution open to her was arbitration. Since the laws and the Constitution of the republic designated the Essequibo as the eastern boundary, no compromise line short of it would be acceptable or legal, whereas the decision of an international arbiter as to the true boundary would be bind-ing and satisfactory. The Venezuelan minister in London was instructed, on July 15, 1882, to suggest arbitration, and President Guzman Blanco, in November of that year, communicated the state of the negotiations to the Secretary of State at Washington, together with a copy of an intended note proposing arbitration, requesting advice from the United States Government and such support as it was deemed possible to give. Mr. Frelinghuysen, in a dispatch to the minister in Caracas, intimated the willingness of the United States to use its good offices to promote arbitration, though not to approach Great Britain as the advocate of any prejudged solution in favor of Venezuela. He desired the minister to say to the Foreign Secretary in Caracas that "the United States, while advocating strongly the recourse to arbitration for the adjustment of international disputes affeeting the states of America, does not seek to put itself forward as the arbiter; that, viewing all such questions impartially, with no intent or desire to prejudice their merits, the United States will not refuse its arbitration if desired by both parties; and that, regarding all such questions as essentially and distinctively American, the United States would always prefer to see such contentions adjusted through the arbitrament of an American rather than a European power.

On Nov. 15, 1883, the Venezuelan Government proposed to submit the frontier dispute to arbitration, saying that it was necessary to have the decision of an impartial referee, since the Constitution of the republic forbade the alienation of any part of the national territory. Col. Mansfield, then British minister at Caracas, replied, on March 29, 1884, that the dispute was not a proper subject for arbitration, and Guzman Blanco went to London as minister plenipotentiary for the purpose of reaching a settlement, if possible. On his way he stopped in Washington and conferred with the Secretary of State, who instructed Mr. Lowell to use his discretion as to how far his good offices could be profitably employed, but, at any rate, to "take proper occasion to let Lord Granville know that we are not without concern as to whatever may affect the interests of a sister republic on the American continent and its posi-tion in the family of nations." Gen. Blanco suggested to the British Government, as an alternative to arbitration by a third party, that the question be submitted to a commission of jurists appointed by both parties. This Lord Granville found incompatible with the British Constitution. Lord Granville declared that Great Brit-ain's object was not to obtain Venezuelan terriory, but to determine where the line ran, and in finally agreed to a general arbitration of the tions pending between the two countries. t before the convention was signed the Maris of Salisbury, on June 24, 1885, became inister of Foreign Affairs, and refused to con-irm this agreement with Venezuela. Lord Rosebery, who became Foreign Secretary

eder Gladstone, Feb. 6, 1886, proposed a bound. y line that should start from the seacoast west the river Waini, but this was rejected, on the and that it would decide once for all the undary question in a manner unfavorable to

Meanwhile Michael McTurk, with a body of lies from Demerara, took possession of Point barima and entered the rivers, posting notices on the trees indicating British dominion. He in-bound Mr. Kelly, manager of the Manoa Com-cony, which had obtained from the Venezuelan covernment mining rights and land titles exding up to the border of British Guiana, that Barima river was in British Guiana, and he ory between the Marceo and the Amaeuka riv-rs was a part of British Guiana. A notice was published in the London "Gazette" on Oct. 21, 86, giving warning that, whereas the boundary e was in dispute, it having come to the knowlade of the British Government that grants of and within the territory claimed by it had been made in the name of the Government of Veneala, no land title or other right affecting land thin the territory claimed as part of the colony British Guiana would be admitted.

The Venezuelan Government complained that British authorities had executed solemn acts d jurisdiction in places admitted to be in dispute, thus violating the agreement of 1850, to ala had exercised such jurisdiction, also break-

the agreement. Seflor Urbaneja, the Venezuelan Foreign Minter, urging that the Manoa grant could not see given Great Britain cause of complaint, nee the concession embraced no land that was dispute, and had, moreover, expired, declared at diplomatic relations with Great Britain ould be broken off unless the occupation of Point Barima, admitted by Sir John Ker Porter 1836 to belong to Venezuela, and of other ints in the disputed territory, should cease. he British minister, F. R. St. John, replied at he was unable to explain the proceedings the authorities of British Guiana or to discuss them without instructions, and said that his Government was not bound by the unauthorized imission of a diplomatic agent made fifty tars before. Lord Salisbury subsequently inructed the minister to say that Great Britain ald not object even then to the erection of a ithouse on Point Barina for the benefit of nmerce, as the British consul requested in 1836, provided that it would not be construct any way prejudicial to the British claim to be territory in dispute. With the object of reventing a rupture of diplomatic relations tween Great Britain and Venezuela Secretary Bayard, in December, 1886, instructed the United

States minister in Landen to tender the with trathen of the United States, saving than I was done "with the less heritatory as the smooth turns upon simple and readily among a name but torical facts." The relationers of the transition States to the matter were explained as follow "The attitude of friendly assurabily and only or impartiality touching the controvers connecing wholly of a difference of facts between our frietule and neighbore, is entirely committend and compatible with the sense of responsibility that rests upon the United States to relation to the South American republics. The discritance we announced two generalisms ago, at the instance and with the moral support and approval of the British Government, have but mone of their force or importance in the progress of time, and the governments of tirest Britain and the Cauted States are really interested in connerving a status the wisdom of which has been demonstrated by the experience of more than half a sundays The Spanish Government and accord of the South American regulation also offered their good offices, and the Pope offered also to act as arbitrator. His offer and that of the United States were declined by Great Britain. The President of Venezuela appointed Dr. Jesus Muñoz. Tebas and Gen. Rodd commissioners to investigate the acts of encreachment by fareat Britain. Acting on their report, Minister Progra B. Urbaneja, on Jan. 26, 1987, represented that Great Britain had violated the convention that was her own suggestion by entering the Waissi, Morajuana, Amaruka, and Barima streets and posting notices on the banks proclaiming that her laws were in force there, by mixing a Vene-zuelan commissary within Venezusian periodistion and carrying him of to Georgetown to be tried and fined, by establishing a public office in Amacuka, by cruising in a revenue runter be-tween the Amacuka and the Bartma, by weeding a magnitude to decode on estimated and points cases there, by anthorizing the working of money on Venezuelan territory, and finally by agume printing said territory on the pretest that a dispute regarding limits is pending. The Yourname of the President that the British evacuals the territory from the mouth of the terimons in the Pumeron by Felt 20, 1887, the date for the assembling of the congress others in the diples matic relations of the two countries would be several. In the final mate disministing the Best. ish minister, Schoe I rhancja recognitulated the case of Venezueta and protented tedors the Birthish thevermeent and before all eveninged mediums against the British acts of specialism, "which Venezuela would meved recognitie as altering the rights she had inherited from Square, and will ever be willing to submit to the decision of a third power " Neare then official economication tions between the two governments have been presented through the German minister at Ca-

Secretary Bayand, having been beformed in Peternary, 1999, that the Government of British ticisma be formal decree, had laid claim to the territors traversed by the reads of a proposed railrowl from Cinded Bolivar to Guangati. to the United States minuster in Lember. The claim now stated to have been put forth to the

authorities of British Guiana necessarily gives rise to grave disquietude and creates as apprehension that the territorial claim does not follow historical tradition or evidence, but is apparently indefinite." He intimated anew the great gratifleation that it would afford the United States Government to see the Venezuelan dispute amicably and honorably settled by arbitration or otherwise. After pointing out that Guasipati lies considerably westward of the line officially claimed in 1887, which followed the Yuruari and itself made a wide detour to the west of the line given out by the Colonial Office ten years earlier, Mr. Bayard concluded: "If, indeed, it should appear that there is no fixed limit to the British boundary claim, our good disposition to aid in a boundary settlement might not only be defeated, but be obliged to give place to a feel-ing of grave concern. Information having been received in 1889 that Barima had been declared a British port, Secretary Blaine authorized the acting minister in London to confer with Lord Salisbury, with a view to the re-establishment of diplomatic relations between Great Britain and Venezuela on the basis of the temporary restoration of the status quo. In May, 1890, the Secretary telegraphed to Mr. Lincoln to use his good offices to bring about the resumption of diplomatic intercourse as a preliminary step toward the settlement of the boundary dispute by arbitration, and to that end he suggested an informal conference in Washington or London of representatives of the 3 powers in which conference the position of the United States would be "one solely of impartial friendship toward both litigants." The minister was instructed to do all that he could consistently with such an impartial attitude, to bring about some accord between the contestants by which "the merits of the controversy can be fairly ascertained and the rights of each party justly confirmed." Without expressing an opinion as to what those rights were, the Department of State "was confident that the shifting footing on which the British boundary question has rested for several years past is an obstacle to such a correct appreciation of the nature and grounds of her claim as would alone warrant the formation of an opinion.

With the development of mining, the boundary claim of Great Britain continued to be moved farther west. Venezuela was forced by Venezuela was forced by British aggressions to resume the negotiations, which were reopened in 1890 through the Venez clan minister in Paris and a special envoy. The latter went to London with a view to the results on of regular diplomatic relations, and was received by Lord Salisbury through the god the minister of the United States; ression failed because a condition of the reference of the boundary disare tration. When, in his interview Bryan munister, the Venezuelan comthe energy led the subject of the boundary dispute the was informed that "England is not aware the and such nation as Venezuela exists, and dear it along that there is any question pending between the two countries. The line claimed by L r I Susbury at that time began at the mouth of the Amacuka, west of Point

Barima. Señor Michelena, a confidential agent of Venezuela, reopened informal negotiations in London in 1893. Lord Rosebery carried the frontier west of the Amacuka and in the interior as far as the source of Cumano river and the sierra of Usupamo, and offered to arbitrate regarding territory west of that line. The Venezuelan agent abandoned his fruitless mission in October, 1893, leaving at the Foreign Office a declaration protesting against the proceedings of the colony of British Guiana as encroachments upon the soil of the republic, and also against the claim of the British Government that that part of the territory belonged to British Guiana, and laying upon the British Government the responsibility for the incidents that might arise in the future from the necessity to which Venezuela was driven to oppose the dispossession of a part of her territory and provide for her legitimate defense.

After the failure of the Michelena mission Venezuela repeatedly brought the controversy to the notice of the Government in Washington. insisting on its importance to the United States as well as to Venezuela, and represented it as having reached an acute stage. The minister at St. James's was informally instructed to exert all his influence in the direction of the re-establishment of diplomatic intercourse and in favor of arbitration. On July 13, 1894, Secretary Gresham wrote to Mr. Bayard: "I can discern but two equitable solutions of the present controversy. One is the arbitration of the rights of the disputants as the respective successors of Holland and Spain over the region in question. The other is to create a new boundary line in accordance with the dictates of mutual expediency and consideration. The two governments having so far been unable to agree upon a conventional line, the consistent and conspicuous advocacy by the United States and England of the principle of arbitration and their recourse thereto in settlement of important questions arising between them, makes such a mode of adjustment especially appropriate in the present instance."

The authorities of British Guiana in 1894 established a police station at Yuruan, at the junction of the Yuruan and Yuruari rivers, 100 miles beyond the Schomburgk line and outside of the Aberdeen and Granville lines, or any line previously claimed by Great Britain. Warning was sent from the Venezuelan military post on the opposite side of the Cuvuni that the upper Cuyuni district was administered by Venezuela and never had been claimed by Great Britain. In September a party went over and arrested Inspector Barnes and Subinspector Baker, carrying them to Upata for trial. As soon as the facts became known in Caracas peremptory orders were sent for the release of the prisoners, who were thereupon conducted back to the place where they had been captured, and were repaid for the loss of clothes and other property. The English hauled down the Venezuelan flag and raised their own again. The leaders of the raiding party were ordered to Caracas, and were there severely punished. October, 1895, England demanded an indemnity of £12,000 for "the arrest and imprisonment of 2 English subjects on English territory." Vene-

zucla had immediately informed the London tiovernment of the reparation already made, and President Crespo demurred to paying an indemnity, and especially to the form in which it was demanded, implying an acknowledgment of British sovereignty over Yuruan. Great Britain then proposed arbitration of the question; but to this Venezuela would not agree, because it would likewise assume that the incident occurred

on British territory.

Mining began in 1886, and since the rupture the invading miners have advanced up Cuvuni river beyond the Schomburgk line until they have reached the district of the Callao mine, owned in great part by the English firm of Rothschild, which has long been worked, producing \$30,000,000, by a company that holds its concession from and pays royalties to the Venezuclan Government. All the streams flowing into the Cuyuni, the Mazaruni, the Barima, and the Amacuka are rich in gold. The work is largely done for the English miners by imported coolie contract laborers. The output rose from \$112,000 in 1886 to nearly \$500,000 in 1888. The product for the first five years was \$2,272,-In 1893 \$2,400,000 was taken out; in 1894, \$2,485,000. About 10,000 laborers were employed in the diggings in 1895. The richest field is the Yuruari district, the farthest within the Venezuelan claim, bordering on settled Venezuelan territory, and this is now entirely covered by English mining claims. The only mining in British Guiana is in this part of the disputed territory that lies mostly west of the Schomburgk line, and was never claimed nor visited by England until after the gold discoveries. The British colonial authorities look to this new industry of gold mining, at the extreme limit of their territorial claim in this region, to retrieve the decay and bankruptey of British Guiana, where, in spite of the gold exports, the total exports have fallen off from \$12,600,000 in 1891 to \$11,700,000 in 1894, so rapid is the decline of the sugar industry, which has been the colony's only source of wealth, and has not been resuscitated by supplanting free negro labor with contract coolie labor. The sugar estates are rapidly going out of cultivation, the acreage having diminished from 79,500 acres in 1884 to 69,800 in 1894 and about 60,000 in 1895, when the process still continued at a more rapid rate. with the prospect of a reduction of 10,000 acres there in the course of another year. Hence I soph H. Chamberlain, the British Colonial Secretary, has urged the building of a road from Bar ma to the Cuyuni for the development describble to the control of British Guiana, as total region is called. In a dispatch to Governor of British Guinna in September, face a lat would be necessary, in order to a second a cov for the safety of the district r against incursion, to strengthen against mearsion, to strengthen to the control of t force on the Version in frontier, which could

only be reached by three weeks' traveling through the bush, one of them prophesying that the first news they would get of the Gatling gun would be of its being exhibited as a curiosity in Ciudad Bolivar. Mr. Chamberlain, considering that there was not enough capital in British Guiana or among the adventurers who were attracted to the gold fields to develop the mines with desirable rapidity, set about seeking a syndicate in England prepared to purchase for a capital sum the concession of a fair portion of the gold field in the northwest district. The white or European-born population of British Guiana in 1891 was 2,533, while there were 99,-615 Africans, 105,465 East Indians, and 3,714 Chinese,

Besides Callao, there are other mines in Venezuelan Guiana worked by French, English, and Venezuelan companies. Except in the towns and mining settlements, the country is inhabited only by a few primitive tribes. The immense forests of the upper Cuyuni district, rich in quinine, rubber, cinnamon, and sarapia, are unexploited, owing to the lack of transportation facilities. A railroad has been projected to run 170 miles from the Orinoco to the Yuruan, passing through the towns of St. Felix, Upata, Guasipati, and Caratal. American companies have obtained concessions for the development of the lands, forests, and mines in this region. The Orinoco Company has a grant of 14,400,000 acres. The Manoa grant, which lapsed and was afterward resuscitated, covered about 14,000,000 acres near the mouth of the Orinoco.

The United States Congress, on Feb. 22, 1895, in a joint resolution, declared that "the President's suggestion that Great Britain and Venezuela refer their disputes as to boundaries to friendly arbitration be earnestly recommended to the favorable consideration of both parties in

interest."

On July 20, 1895, Secretary Olney sent a letter to the American ambassador at London, in which he said it is impossible to treat the Schomburgk line as a matter of right, or as anything but a line originating in considerations of convenience and expediency; that the various other boundary lines suggested by Great Britain were proposed as conventional lines to which the assent of Venezuela was desired, not demanded as a matter of right; and neither party stands for a boundary line predicated upon strict legal right, Great Britain having formulated no such claim, and Venezuela insisting on the Essequibo line only as a concession to Great Britain, granted out of moderation and prudence. The Secretary of State analyzed the situation as follows:

1. The title to territory of indefinite, but confessed-ly very large extent is in dispute between Great Britain on the one hand and the South American republic of Venezuela on the other.

2. The disparity in the strength of the claimants is such that Venezuela can hope to establish her claim only through peaceful methods-through an agree ment with her adversary either upon the subject it self or upon an arbitration.

3. The controversy, with varying claims on the part of Great Britain, has existed for more than half a century, during which period many carnest and persistent efforts of Venezuela to establish a boundary by agreement have proved unsuccessful.

4. The futility of the endeavor to obtain a conven-ceal line being recognized, Venezuela for a quarter fa century has asked and striven for arbitration.

5. Great Britain, however, has always and continu-nity refused to arbitrate, except upon the condition fa renunciation of a large part of the Venezuelan alm and of a concession to herself of a large share

he territory in controversy.

By the frequent interposition of its good offices the instance of Venezuela, by constantly urging a promoting the restoration of diplomatic relations the instance ad pronoting the restoration of diplomatic relations atween the two countries, by pressing for arbitration the disputed boundary, by offering to act as arbi-ster, by expressing its grave concern whenever new leged instances of British aggression upon Vene-cian territory have been brought to its notice, the overnment of the United States has made it clear to Britain and the world that the contrivers is in which both its honor and its interests are inived and the continuance of which it can not rewith indifference.

The United States had already done all that a rely sentimental interest in the affairs of the countries justifies, but the Secretary pointed at that the settled national policy, based upon be principle of international law that a nation y justly interpose in a controversy between nations whenever what is done or proed is "a serious and direct menace to its own grity, tranquillity, or welfare," imposed the ght and duty upon those charged with the ints of the United States to see that the inrity of the Venezuelan territory is not im-red by the pretensions of its powerful antag-ta. Washington, in his farewell address, arned his countrymen against entanglement e politics or the controversies of European wers, and President Monroe, in his message Congress of Dec. 2, 1823, completed the outof a distinctive American policy, which enunciated in the following language:

In the wars of the European powers in matters resting to themselves, we have never taken any part, or does it comport with our policy to do so. It is all when our rights are invaded or seriously mensed that we resent injuries or make preparations or our defense. With the movements in this hemistrate wars for the components of the comp no we are of necessity more immediately conchiened and impartial observers. The political ism of the allied powers is essentially different in respect from that of America. This difference is respect from that of America. This difference receeds from that which exists in their respective exemments. And to the defense of our own, high has been achieved by the loss of so much flood and treasure and matured by the wisdom of the contract of th r most enlightened citizens, and under which we enjoyed unexampled felicity, this whole na-is devoted. We owe it, therefore, to cander and the anticable relations existing between the United ies and those powers to declare that we should sider any attempt on their part to extend their tem to any portion of this hemisphere as dangerto our peace and safety. With the existing colo-s or dependencies of any European power we make interfered and shall not interfere. But with not interfered and shall not interfere. governments who have declared their independ nd maintained it, and whose independence we on great consideration and on just principles, the purpose of oppressing them, or controlling any other manner their destiny, by any European wer in any other light than as the manifestation an unfriendly disposition toward the United Constant of the Co ates. . . Our policy in regard to Funge, which adopted at an early stage of the ware which base ong agitated that quarter of the globe, nevertheless

frematio the same, which is no Itstatual conservation of any of the je will a the two estimated do fails so the me ... Buetel for us , to conterate francis feist . . . atal to preserve those residence by a france to mately feelers, meeting to all intertunine the turn of every power, endemnisting to impatture from torin But in request to these conditions, consumments in eminently and emperaturily different in is suprewible that the allied powers should extend their palithral system to adop posture of sidder constitued with out endangering our peace and happiness, air can ally one believe that our mentham britishes, if both to themselves, would adopt it of their own mound. It is enqually impressible, therefore, that we chould buttoud such interpretation in any form with indifference.

The scope and limitations of the Montess don-trine Mr. Olney defined as follows:

The rule in question has but a single purpose and object. It is that no European power or condition of European powers shall discibly depotes an American state of the right and power of satisfying ernment and of abaying for itself do over political topturnes and destinies

That it has been the accepted public law of the United States ever since its promolgation, he showed from the atterances of statements; from its approval by every Administration; from the declarations of Congress, as when the House, in 1864, condemned the measurehy in Mrs. ico, and when the Senate, in 1880, disapproved the connection of any European power with a canal across the isthmus of Darien, and from the acts and declarations of the executive branch of the Government. He affirmed that it was the most influential factor in the emancipution of bouch America; it compelled the French to evacuate Mexico, led to the neutralization of any interoceanic canal across Central America and the exclusion of Great Britain from executing say dominion over any part of Central America by the Clayton-Bulwer treaty, inhibited the treateder of Cuba by Spain to any other European power, and the proposed cession of Yucudan to Great Britain or Spain, and was influential in beinging about the final relimquishment of accompposed British predectorate over the Mangacha In the spirit of this doctrine President Grant, in his message of 1970, declared that existing dependencies, when the present relation of colonies ceases, are to become independent powers; another development is the objection to the arbitration of American questions by Earopean powers, which prompted the United States Government to refuse to mudiale jointly with tireat Britain and Praces in the was been tween thilt and Peru, and on the ground, among others, that the Monroe distribut and the prestige of the United States would be impaired ereretary Bayard stremmounty presided the em forcement of the Pelletier chalm against Hayla. Mr. Olmey defined the facts and patraciples on which the destrine red, the interesting much which makes and permanent positional union between a European and an American state amnatural and inexpedient, the armed trace of Europe, with which American stades have nothing to do; and the difference in moral inference, Enroge twing, with a single exception, mentaled yeal while America "is devoted in the sies that every people has an inalireable right? will percrament, and in the United Water has

furnished to the world the most conspicuous and conclusive example and proof of the excellence of free institutions." If the forcible intrusion of European powers is to be deprecated and should be resisted, resistance must come from the United States, since it only has the adequate strength, and Mr. Olney declared that the safety and welfare of the United States are so concerned with the maintenance of the independence of every American state against any European power as to justify and require the interposition of the United States whenever that independence is endangered. He defined the position of the United States further:

To day the United States is practically sovereign on this continent, and its flat is law upon the subjects to which it confines its interposition. Why? It is not because of the pure friendship or good will felt for it. It is not simply by reason of its high character as a civilized state, nor because wisdom and justice and equity are the invariable characteristics of the dealings of the United States. It is because, in addition to all other grounds, its infinite resources, combined with its isolated position, render it master of the situation and practically invulnerable as against any or all other powers. All the advantages of this superiority are at once imperiled if the principle be admitted that European powers may convert American states into colonies or provinces of their own. The principle would be eagerly availed of, and every power doing so would immediately acquire a base of military operations against us.

He pictured the disastrous consequences that would be fall the United States were the struggle now going on for the acquisition of Africa transferred to South America, when all South America might be partitioned among European powers, one of the least of which would be the loss of prestige, of authority, of weight among the councils of nations, for then "our only real rivals in peace as well as enemies in war would be located at our very doors"; then "we too must be armed to the teeth, we too must convert the flower of our male population into soldiers and sailors, and by withdrawing them from peaceful industry we too must practically annihilate a large share of the productive energy of the nation." He pointed out that if the political control at stake involves the command of the mouth of the Orinoco, it is of immense consequence in connection with the whole river navigation of the interior of South America. Great Britain insist that it, too, is a South Amernear state, he argued that, if the boundary que san not be settled otherwise than by re. British Guiana, with her independent reat the should be left to settle it with Venezuela; 1 : 100 proposition that a European power And recan dependency is, for the purstate, he thought, did not admit of . . h. for theh any European power ". American colony, or any one to a fraction of South American - as indefinitely. The decla-TA - pressage that existing colo-- would not be interfered with - dependencies then exof as then existing." Hav-1911TIG TE ing made of the United States may legitimate. the ments of the

boundary question being determined, Secretary Olney declared that the only feasible mode of determining them is by peaceful arbitration, any conventional adjustment having been found impracticable, and an appeal to arms were not only condemnable as a relic of barbarism, but "so one-sided a contest could not be invited nor even accepted by Great Britain without distinct disparagement to her as a civilized state,' Great Britain admits, he wrote, that there is a controversy and that arbitration should be resorted to for its adjustment; but the practical effect of this attitude is nullified by her insistence that, as a condition of arbitrating her right to a part of the disputed territory, the remainder shall be turned over to her, consisting of territory that has always and consistently been claimed by Venezuela. It is intimated that the claim of Great Britain to this particular territory rests upon an occupation which, whether acquiesced in or not, has ripened into a perfect title by long continuance; but, even if prescription affecting territorial rights can be said to exist between sovereign states, the legitimate consequence is "not that all arbitration should be denied, but only that the submission should embrace an additional topic, namely, the validity of the asserted prescriptive title either in point of law or in point of fact." The principle that a sovereign state can not be asked to arbitrate its political rights over its territory has no pertinency when the interests or the territorial area involved can not appreciably affect by their loss its honor or power, as Great Britain has shown by arbitrating the extent of her colonial possessions twice with the United States, once with Portugal, and once with Germany. The attitude assumed by Great Britain in refusing to arbitrate unless a part of the debatable land, designated by herself, is first abandoned to her, seemed to Mr. Olney to deprive Venezuela of her free agency and put her under virtual duress.

Lord Salisbury did not answer Mr. Olney until the points raised had been carefully considered by the law officers of the Crown. In the first of two notes, both dated Nov. 26, 1895, he dealt with the Monroe doctrine, which, he believed, had never before been advanced in a written communication addressed to another government, and which had undergone a nota-

ble development since 1823.

The formation of the Holy Alliance, the congresses of Labach and Verona, the invasion of Spain by France for the purpose of forcing upon the Spanish people a form of government which seemed likely to disappear unless it was sustained by external aid, were incidents fresh in the mind of President Monroe when he penned his celebrated message. The system of which he speaks, and of which he so resolutely deprecates the application to the American continent, was the system then adopted by certain powerful states upon the Continent of Europe of combining to prevent by force of arms the adoption in other countries of political institutions which they disliked, and to uphold by external pressure those which they approved. Various portions of South America had recently declared their independence, and that independence had not been recognized by the governments of Spain and Portugal, to which, with small exception, the whole of Central and South America were nominally subject. It was not an imaginary danger that he foresaw if he feared that the same spirit which had dictated the French expedition

into Spain might inspire the more powerful governments of Europe with the idea of imposing, by the force of European arms, upon the South American communities the form of government and the political connection which they had thrown off. In declaring that the United States would resist any such enterprise if it was contemplated President Monroe adopted a policy which received the entire sympathy of the English Government of that date.

Lord Salisbury found it intelligible that Mr. Olney should invoke "an authority which enjoys so high a popularity with his own fellow-countrymon," but the dangers apprehended by President Monroe "have no relation to the state of things in which we live at the present day." Great Britain is imposing no "system" upon Venezuela, but the British Empire and the republic of Venezuela "are neighbors having a controversy about boundaries with which the United States have no apparent concern," it being "simply the determination of the frontier of a British possession which belonged to the throne of England long before the republic of Venezuela came into existence." While denying the applicability of the Monroe dectrine to the Guiana dispute, and controverting the extension of it which invests the United States with the "novel prerogative" of demanding the submission of any frontier difference which a European power may have with a South American community to arbitration, he disclaimed any acceptance of the doctrine itself, a ovel principle forming no part of international law, having never been recognized by the govrament of any other country. The right of the United States to interfere when their interests are affected he held to be in no way strengthned by the fact that the controversy affects American territory, and he protested against fr. Olney's declaration that a permanent political union between a European and an American state is inexpedient and unnatural, the necessary meaning of which is that the union between Great Britain and Canada, Jamaica, Trinidad, British Honduras, or British Guiana is "inexpedient and unnatural." The British Government, he said in conclusion, was "not prepared to ad-mit that the interests of the United States are searily concerned in every frontier dispute which may arise between any two of the states who possess dominion in the western hemi-sphere," and still less to accept the doctrine." "that the United States are entitled to claim that the process of arbitration shall be applied to any demand for the surrender of territory.

In his second note Lord Salisbury said that Great Britain's title to the territory in dispute was derived by conquest from the Dutch; that Yenezuela derived no title from Spain, because Spain had not asserted ownership of it, Venezuela's argument being based upon the principle "that, inasmuch as Spain was originally entitled of right to the whole of the American continent, any territory on that continent which she can not be shown to have acknowledged in positive and specific terms to have passed to another power can only have been acquired by wrongful usurpation, and, if situated to the north of the Amazon and west of the Atlantic, must necessarily belong to Venezuela as her self-constituted inheritor in those regions.

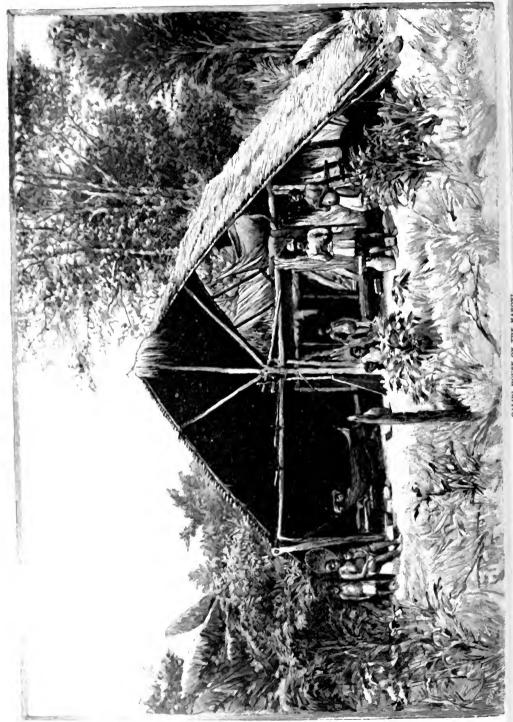

The Schomburgk line he described as a great

reduction of the house are Britain so matter of right w from the first to even prime the the river Amarcka and the who is Emerguites river and its tributarine of this claim, said Lord Salishours the book authorities have always been willing t vivi altegether; in regard to another postion the have been, and continue to be perfectly reads to submit the question of their table to arbutration, but " as regarde the rest, that which her without the so-called Schomburgh line, they do not consider that the rights of Great Britain are open to question." Sir R. Schemburgh, he said, "did not discover or invest any any boundaries. He took particular care to fortify homosif with the history of the case. He had further from actual exploration and information obtained from the Indiana, as at Point Bartona, and from heral traditions, as on the Cuyuni, fixed the limits of the Dutch presentings and the sphare from which all Spanish influence was shound." within that line they have offered he asserted considerable concessions as a matter of framile ship and conciliation, and if these communicate, as time has gone on, " diminished in extend and have now been withdrawn, this has been the necessary consequence of the gradual spread over the country of British settlements, whinth her Majesty's Government can not, in justice to the inhabitants, offer to surremiler to furniges In conclusion, he refused in behalf of the British Government, " to endead to whitetion of another power or to foreign jurists, however eminent, claims based upon the extra-against pretensions of Spanish officials of the seat outtury and involving the tracefer of large numbers of British subjects, who have for many years enjoyed the settled rule of a Boston colony, to a nation of different race and has guage, whose political system is subject to five quent disturbance, and whose institutions as sat too often afford very inadequate production he life and property.

After the receipt of the British Constrained's refusal to arbitrate except in regard to herithery west of the Schomburg's lime and not set claimed by the miner from Gusana, President Cleveland laid the matter before Congress, on Due, 12, in the following message:

In my amount money addressed to the Competer on the M and I recited attending to the generality republished becauseous and remind the neclement of representation made by this toppermisses to him Both. action Najund's to retrieve American to expend the property despress the beautiful to the property adversarial to the property of the property well-moved, and requiring whiches it would be an antender! which was then a vactors best mitten bung benter beitel with higher with the dispared be which it is a suger, is house appreciate bruth ought to auchenbund in two part to the Farmer Parameteria, this Birthyall assellaumartien at these capeta. It we has more that while of theme more which the is described equibudantly be absurranteine with the Momeron Southfran, and eligiber third un this bire seriestates equiente beta west a sucatest toporni cree growent of these deservises is brokened ast be-I cuted where the the remember partiring at a cutwhich we here at the present day, and --

applicable to a controversy involving the foundary stween Great Britain and Venezuela

Without attempting extended argument in reply to e positions, it may not be amiss to suggest that doctrine upon which we stand is strong and and because its enforcement is important to our se and safety as a nation and is essential to the grity of our free institutions and the transput signity of our free institutions and the transput antenance of our distinctive form of government, was intended to apply to every stage of our nationalife, and can not become obsolete while our republication. If the balance of power is justly a cause reaction anxiety among the governments of the dworld and a subject for our absolute nonintersence, none the less is an observance of the Monroe string of vital concern to our results and their the trine of vital concern to our people and their tion .

suming, therefore, that we may properly insist this doctrine without regard to the state of in which we live or any changed conditions re or elsewhere, it is not apparent why its applica-n may not be invoked in the present controversy, a European power, by an extension of its boundas, takes possession of the territory of one of our ghboring republics against its will and in deraga-n of its rights, it is difficult to see why to that exsuch European power does not thereby attempt extend its system of government to that portion of a continent which is thus taken. This is the precontinent which is thus taken. This is the pre-action which President Monroe declared to be negerous to our peace and safety," and it can make difference whether the European system is ex-led by an advance of frontier or otherwise. It is led by an advance of frontier or otherwise. It is suggested in the British reply that we should seek to apply the Monroe doctrine to the pending sputs because it does not embody any principle of ternational law which is "founded on the general need of nations," and that "no statesman, however allows, and we matter inent, and no nation, however powerful, are comreal principle which was never recognized before a which has not since been accepted by the (iorment of any other country." Practically, the neighe for which we contend has peculiar if not the country of the property of th ve relation to the United States. It may not en admitted in so many words to the code of rnational law, but, since in international councils by nation is entitled to the rights belonging to it, enforcement of the Monroe doctrine is someg, we may justly claim it has its place in the coste ternational law as certainly and as securely as if were specifically mentioned; and when the United ates is a suitor before the high tribunal that ad-misters international law, the question to be deterd is whether or not we present claims which the tice of that code of law can find to be right and lid. The Monroe doctrine finds its recognition in principles of international law, which are based on the theory that every nation shall have its has protected and its just claims enforced. Of the this Government is entirely confident that r the sanction of this doctrine we have clear and undoubted claims. Nor is this ignored in British reply. The Prime Minister, while not sitting that the Monroe doctrine is applicable to ment conditions, states that in declaring that the ited States would resist any such enterprise if it recontemplated, President Monroe adopted a polwhich received the entire sympathy of the higt though the language of President Monroe is ill ad to the attainment of objects which mest Eng-men would agree to be salutary, it is imposse, like admit that they have been inscribed by any ale anthority in the code of international has a rain, he says they (her Majesty's tenvernment) ally concur with the view which President Macros rently entertained—that any disturbation it ex ting territorial distribution in that here appears to v fresh acquisitions on the part of any fungers to would be highly inexpedient.

The Congress having unanimously authorized the appointment of commissioners to report upon the true divisional line between British Guiana and Venezuela, the President appointed a com-mission composed as follows: Justice David J. Brewer, of the United States Supreme Court : Chief-Justice Aivey, of the Court of Appeals of the District of Columbia; Andrew D. White, of New York : Frederick R. Condert, of New York ; and Daniel C. Gilman, President of Johns Hopkins University, Baltimore, VERMONT, a New England State, admitted

to the Union March 4, 1791; area, 9,565 square The population, according to each decennial census since admission, was 154,465 in 1800; 217,895 in 1810; 235,966 in 1820; 280,652 in 1830; 281,948 in 1840; 314,120 in 1850; 315,-098 in 1860; 350,551 in 1870; 332,286 in 1880; and 332,422 in 1890. Capital, Montpelier.

Government,-The following were the State officers during the year: Governor, Urban A. Woodbury; Lieutenant Governor, Zophar M. Mansur; Secretary of State and Insurance Commassur; Secretary of State and Instance Com-missioner, Chauncey W. Brownell, Jr.; Treas-nrer, Henry F. Field; Auditor, Franklin D. Hale; Adjutant General, T. S. Peck; Superin-tendent of Education, Mason S. Stone; Bank Inspector, Frederick E. Smith; Railroad Commissioners, Olin Merrill, Orion M. Barber, Charles J. Bell; Chief Justice of the Supreme Court. Jonathan Ross; Associate Justices, John W. Rowell, Russell S. Taft, Henry R. Start, L. H. Thompson, James M. Tyler, Loveland Munson -all Republicans.

Finances.-The total State expenses for the vear ending June 30, 1895, were \$683,863.67. The cost of the Legislature of 1894 was \$58,-815.04. The payments into the treasury by towns of all profits upon the sales of liquors in excess of 10 per cent., according to the law of 1894, amounted to only \$544.36, many towns having reduced the selling prices. The estimate of the income for the year 1895-'96 from State and corporation taxes place it at \$520,000.

Education,-The number of public schools in the State is 2,292; the aggregate cost in 1882 was \$476,478.08; in 1892 it had risen to \$735,-480.18, and in 1894 to \$783,805,40. Of this amount, \$561,809.89 was paid to teachers in The number of children in parochial s hools is 3.118. In 1892 it was 4.305. The expenditure per capita of population in 1890-91 was \$2.18. The total valuation of school prop-The total valuation of school proporty - \$1,022,086,95.

Insurance.-Fire insurance companies have long maintained that their losses incurred in Vermont and the expense of doing the business largely exceed the premiums. In 1894 the premiums amounted to \$763,429.77; the losses incurred were \$716.571.27, or about 94 per cent. of the premiums. Individual instances are given of losses largely exceeding premiums, and, in the case of 20 of the 45 companies doing business in the State, the losses exceed the premiums

in varying amounts.

The report of the National Life Insurance Company of Vermont, which has been in business for forty-five years, shows that the net assets aggregated at the beginning of the year \$10,205,635.60. It had received during the year \$2,931,322.50. It had paid in death claims \$476,758.23; in matured endowments and surrendered policies, \$607,669.28; in surplus returned, \$122,179.81; aggregating \$1,206,607.32 returned to policyholders. The total expenses had been \$651,171.63. Interest due and accrued, unreported and deferred premiums, and premium on stocks and bonds aggregated \$840,-041.11, making the gross assets \$11,045,676.71. The total liabilities as to policyholders, including computed reserve (actuaries 4 per cent.), \$9,-216.926.10, and extra reserve of life-rate endowments, \$354,216.54, were \$9,614,962.69, leaving a surplus (4 per cent.) of \$1,430,714.02, or, computed at 4½ per cent., of \$2,075,898.85. It has now in force 30,186 policies, insuring \$64,975,-950. In new business the following is the record for 1894: Policies issued and revived, 6,813, insuring \$14,769,916; increase in gross ledger assets, \$1,158,824.70; increase in surplus, \$296, 621.66; increase in interest received, \$55,932.88. The gain during the year of the number of policies in force is 1,842; in insurance in force, \$3,343,337; in receipts from premiums, \$83. 887.32. The payment for death claims was \$57,-931,19 less than in 1893, but payments to policyholders \$117,963,15 more.

Industries and Products.—The report of Victor I. Spear, Secretary of the Board of Agriculture, shows that \$1,142,650 was invested during 1894 in new manufacturing enterprises and that employment is given by them to 1,367 persons. The amount of new capital invested is nearly three times the amount for 1893, with more than double the number of employees. During the four years just past \$3,108,960 in capital was invested, giving employment to 5,264 persons. The largest two industries undertaken were the cotton mill at Burlington and the furniture factory at Canaan, the former with a capital of \$400,000, and the latter with

\$250,000.

The number of farms sold in 1894 was 1,973, of which 155 were unoccupied. The total sales of this class of farms in five years were 909.

There were 650 hotels, boarding houses, and private dwellings open for guests during the

summer.

At the beginning of the year there were 190 dairy factories in the State, receiving milk from about 100,000 cows, and several were established during the year. The largest is at St. Albans, where 11 tons of butter were made in a single day in 1895.

Vermont is interested in the sugar bounty, as

one third of the entire crop of maple sugar in the country is made there. The bounty for 1894 amounted to \$81,270,30.

New marble quarries have been opened in

Washington and Barre,

New Cities .- Montpelier and Barre revelved charters from the Legislature of 1894. The census of Montpelier, finished in the summer, shows a total population of 5,045. The increase since 1880 is 1,808; since 1890 it is 900. The indebtedness of the city is \$128,871.33. Montpeller has a new free library, finished in 1895, called the Kellogg-Hubbard Library, from the names of the donors. The Montpelier Public Labrary received an offer from Thomas W. Wood, Prestdent of the Academy of Design in New York, a native of the city, to establish as a part of the library "an attractive collection of oil paintings, water colors, and etchings, for the benefit of atulents who may wish to copy these works of art, as well as for the gratification and educa-tion of the public," provided the library should be removed to the building of the Young Men's Christian Association. The gift was accepted, and the gallery was opened formally in August. The collection contains 24 oil paintings, Il etchings, and 7 water colors. The two latter exhibits are original works of the donor in conception and execution; but of the oil paintings, there are 14 copies from the works of famous men. Another gift to the capital city is a cottage hospital, which was in process of erection during the year at a cost of \$20,000 to \$25,000; it is the gift of a citizen, Homer W.

Revision of the Statutes.—The statutes as revised by the committee and accepted by the Legislature of 1894, which gave the copy to the printers in July, went into effect Aug. 1.

State Boundary.—The Boundary-line Commission of the States of Vermont, New Hampshire, and Massachusetts fluished its work in the summer. The meeting point of the three States was fixed on the west bank of Connecticut river, just east of the South Vernon Railroad station, at about low-water mark. A monument of rubble masonry will be put deep in the sul, reaching to the surface; then a properly inscribed marker of granite is to be erected, referring to the actual corner. About 60 monuments are to be erected between Vermont and Massachusetts. The line as defined between Vermont and Massachusetts runs through the ladies resum of the railroad station at South Vernou.

Bennington-battle Day.—The last Legislature made a law providing that Aug. 16 shall be a legal holiday, to be known as Bennington-battle Day, and it was so observed this year. The report of the Bennington Battle Monument Association shows that the receipts from visitors are more than sufficient to pay ex-

penses.

Legislative Reunion.—A reunion of present and past members of the Legislature was hard at Montpelier, Oct. 2 and 3. It was resimaled that there were 3,000 or more ex-members in many in other States—and invitations were sent to all. Hon, W. P. Dullingham was closed president of the Reunion Assessation. There was a procession in the morning of the 2 with about 800 in line, and a session of the Senting States.

VIRGINIA.

unfunded bonds reduced one third for West Virginia's portion), was \$1,028,217.74; amount of interest outstanding due to July 1, 1891, \$1,-624,252.67; total, \$2,652,470.41. There was held by the United States Government, in trust for certain Indian tribes, bonds of the State of Virginia, which, with interest to July 1, 1891, amounted to \$1,495,678, two thirds of which, deducted from the preceding amount of \$2,652,-470.71, leaves \$1,655,351.74. The Literary fund held a total in bonds and a loan of \$1,464,227.28.

Valuations.-Under the reassessment of 1895 the total value of land, town lots, and buildings was fixed at \$189,571,619 in the counties and \$112,496,521 in the cities, an aggregate of \$302,-068,140. The land books of 1895 fixed this total at \$313,182,340, of which \$302,753,610 was charged against white persons and \$10,428,730 against colored. The total assessed valuation of personal property was \$83,132,476, of which \$79,958,026 was charged against white persons and \$3,174,450 against colored persons. Of the aggregate tax assessed (\$1,983,042.30) the amount against white persons was \$1,808,234.21, and against colored persons \$174,808.09.

Banks.—On Oct. 31, 1895, there were 37 national banks in operation and 16 in liquidation. The active banks had a combined capital of \$4,-796,300; United States bonds on deposit, \$2,-096,750; outstanding circulation, \$1,992,339; excess of United States bonds over the amount required, \$1,061,500; loans and discounts, \$15,-677,095; coin and coin certificates, \$859,623.40; deposits, \$13,829,545; reserve required, \$2,074,-432; and reserve held, \$3,314,248. The State banks on July 11, 1895, numbered 85, and had an aggregate capital of \$6,503,896; loans and discounts, \$17.898,196; resources, \$25,040,095; deposits, \$14,604,673; and surplus and undivided profits, \$2,520,908. The State banks held a total of \$1,493,658 in specie, paper currency, and unclassified cash. The aggregate banking capital of the State was \$11,300,196.

Education.—The school census of 1895 showed that there were in the State 665,533 children of school age, of whom 397,030 were white and 268,503 colored. The enrollment in the public schools was 235,533 white children and 120,453 colored-total, 355,986; and the average daily attendance was 137,830 whites and 64,700 colored-total, 202,530. There were 8,278 public schools in operation, 6,035 for white childrep and 2,243 for colored. The teachers num-1-7-1 5,292, of whom 6,211 were white, 2,081 1 1-1, 3,039 males, and 5,253 females, - in del value of school property owned by dis-"- 1 sas \$2,682,828,98; revenue of the school 16, 81 824,287,77; and expenditures for cur-- - - \$1.622,392.94; for permanent im-\$185,199.46; total, \$1,807,592.40. "If the school year 1894 there were the colleges of liberal arts, with a colleges and instructors and 1,971 the artments, of whom 1,763 were the second three institutions had toeir fibraries, \$403,200 inappears' is and libraries. 82 1. dec and but in 2s, and \$1.867,982 m 1 (als, and received from tintion from presentive funds \$99,823, and constant and other ap-

propriations \$40,000-total income, \$297,775: and benefactions, \$22,565. The public high schools numbered 31, and had 89 instructors and 1,867 pupils; the endowed academies, seminaries, and other private secondary schools, 53, with 148 instructors, 2,225 pupils in secondary grades, of whom 98 were colored, and 24,000 volumes in the libraries; and the colleges exclusively for women, 14, with 176 instructors, 1,869 students in all departments, and 9,260 vol-umes in the libraries. There were 2 public normal schools, with 21 instructors and 274 students in the normal course and 269 in the nonprofessional course; and 2 private normal schools, Hampton Normal and Agricultural Institute and Hartshorn Memorial College, with 87 instructors and 386 students in the normal course and 423 in the nonprofessional course. Commercial and business colleges numbered 4, and had 13 instructors and 542 students in day classes and 80 in evening classes. The financial report of the Virginia Agricultural and Mechanical College for the school year 1894-'95 showed: Receipts from the State, \$18,500; from the United States Government, under the act of Congress of 1862, \$20,569; under the act of 1890, \$13,333, and for support of experiment station, \$15,000; and from fees and all other sources, \$15,509-total, \$82,911; and expenditures for the college proper, \$66,036; for the experiment station, \$20,594—total, \$86,630. Hampton Normal and Agricultural Institute for colored students and Indians had receipts in the same period of \$10,329 from the United States Government under the act of 1862, and \$6,668 under that of 1890, and \$121,848 from fees and all other sources-total, with balance of \$6,168 from 1894, \$145,013; and expenditures for all departments, \$128,852.

The main building of the University of Virginia, at Charlottesville, was destroyed by fire on Oct. 27. The institution had 46 professors and instructors, 567 students, 53,000 volumes in its library, \$274,600 invested in productive funds, income of \$136,000, and benefactions \$55,000. The calamity aroused the friends of the university everywhere and elicited prompt and liberal means for rebuilding and refurnishing.

Mineral Resources .- According to the report of the United States Geological Survey on "Mineral Resources of the United States in 1894," issued in 1895, Virginia's production of coal aggregated 1,229,083 short tons valued at \$933,576, an increase of 408,744 tons in quantity and \$240,828 in value over the output of the previous year. The number of persons employed in the mines was 1,635, and the number of days worked in the year two hundred and thirtyfour. Because of its exemption from the miners' strike, the Pocahontas field increased its output nearly 50 per cent, over that of the preceding year, or from 779,590 short tons to 1,158,437. Of the total product of the State, 1,015,713 short tons were loaded at the mines for shipment, 21,162 were sold to local trade or used by employees. 4,690 were used at the mines for steam and heat. and 187,518 were burned into coke. Two coking plants had 736 ovens completed and 100 building, used 280,524 short tons of coal, and had an output of 180,091 short tons of coke, valued at \$295;747. The State ranked fourth in the

production of iron ore. For the purpose of not revealing individual operations Virginia and West Virginia were grouped, but little of the iron ore came from the latter State, and the output may be practically credited to Virginia. The aggregate production was 35,843 long tone of red hematite, 562,493 of brown bematite, and 2,226 of magnetite—total, 600,562 long total, value, \$873,305. Twenty-two out of 30 furnaces were in blast during the year, and the produc-tion of pig iron was 298,086 long tone; production in the first half of 1895, 142,580 long tons. The output of manganese was 1,797 long tone; value, \$16,658. Quarry operations yielded granite to the value of \$123,361, principally in Chesterfield, Amherst, Henrico, Alexandria, Campbell, and Dinwiddie Counties; slate, \$138,151, chiefly in Buckingham County, with some in Amherst and Albemarle Counties; and limestone, \$284,547, mostly in Botetourt, Warren, Alleghany, and Shenandoah Counties, There were 104 clay-working plants, which had outputs valued as follow: Common and pressed brick, \$779,285; fancy and ornamental brick, \$76,474; fire brick, \$4,794; vitrified paving brick, \$52,750; drain tile, \$10,705; tile other than drain, \$6,696; and miscellaneous, \$6,889; total, \$937,593. The State ranked first in the number of mineral springs, of which 30 out of 34 reported an output for commercial sale of 402,827 gallons; value, \$80,715.

Taxable Manufactures.—The collections of internal revenue in the fiscal year ending June 50, 1895, amounted to \$2,607,181,90, an increase of \$59,258,55 over those of the previous fiscal year. There were 241 single-account tobacco factories, which used 1,289,050 pounds of tobacco for cigars and 3,362,282 pounds for cigarettes, and had an output of 86,752,368 cigars and 822,654,500 cigarettes; and 134 other tobacco factories, which used 41,235,067 pounds of leaf, 570,954 pounds of scraps, 1,505 pounds of steaf, 570,954 pounds of scraps, 1,505 pounds of steaf, 570,954 pounds of scraps, 1,505 pounds of sugar, and 1,861,712 pounds of other materials, and had an output of 31,402,678 pounds of plug tobacco, 4,151,187 pounds of smoff. Out of 322 registered grain, molasses, and fruit distilleries, 102 grain and 149 fruit were in operation. The production of fruit brandy was 4,160 gallons; fermented liquors, 76,617 barrels; amount of spirits rectified, 708,165 gallons; and amount of distilled spirits gauged, 1,632,986 taxable gal-

cnactment of laws that would put an end to it. He also recommended the amendment of the Code, so as to conform to enlightened public sentiment, making prize fighting a felony, and a glove contest, whether in public or private or for any consideration whatever, also a felony. The act of 1894 against gambling on horse races had not had the benedicial result expected, and the Governor recommended that the act be amended by striking out the exception in favor of agricultural associations or fairs and driving clubs or parks, urging that the selling of books or making of pools or mutuals should be absolutely prohibited.

Among the legislative bills approved were

those to amend the act to provide for the settlement of the public debt of the State, not funded under the act to ascertain Virginia's debt at the time of the portion of her territory; to make the rector and visitors of the University of Virginia to repair the loss sustained by the fire there; to amend sections of the Code in relation to the proceedings against delinquent treasurers and their sureties; to anthorize a vote in the city of Danville and town of Neapolis on the question of uniting the city and town in one city; to give a defendant in any case of misdemeanor the right to waive trial by jury; and to amend an act in reference to property that may be distrained for taxes.

W

WASHINGTON, a Pacific coast State, admitted to the Union Nov. 11, 1889; area, 69,180 square miles; population, according to the census of 1890, 349,390; estimated in 1894 at 410,000.

Capital, Olympia.

Government.—The State officers for the year were: Governor, John H. McGraw, Republican; Lieutenant Governor, Frank H. Luce; Secretary of State, James H. Price; Treasurer, Ozro A. Bowen; Auditor, J. E. Frost, succeeding L. R. Grimes, deceased; Attorney-General, William C. Jones; Superintendent of Public Instruction, Charles W. Bean; Land Commissioner, William T. Forrest; Acting Adjutant General, E. C. MacDonald; State Printer, Oliver C. White; Secretary of the Board of Health, Dr. George S. Armstrong; State Librarian, G. A. Kennedy, succeeding F. T. Gilbert, deceased; Chief Justice, R. O. Dunbar; Associates, T. C. Stiles, John P. Hoyt, T. J. Anders; Superior Judge, Mason Irwin; United States Senator, John L. Wilson.

Finances.—The Treasurer's report for December shows a total cash balance of \$213,517.28. The total value of real and personal property in the State in 1895, as equalized by the State Beard in October, was \$204,190,377. The increase on railroad property was \$54,014; on personal property, \$7,193. Real property was lowered \$43,790. The levy in Seattle was 12.5 in the old limits and 9.4 in the new. In King County the amount was \$42,260,615, and in

Pierce \$34,499,410.

Legislative Session.—The fourth assembly of the legislative body was convened on the first Monday in January, and adjourned March 20. It passed 178 bills, only 2 of which were vetoed. Consequent that the solid prize fighting: the solid of singuing birds is made punishable by a time of a best than \$50 or more than \$100. Obtaining the best than \$50 or more than \$100. Obtaining the best than \$50 or more than \$100 of the best than \$50 or more than \$100 of the best than \$50 or more than \$100 of the best than \$50 or more than \$100 of the best than \$50 or more than \$100 of the best than \$50 or more than \$100 of the best than \$100 of the

care of stock. The Dairy Commissioners shall impose analysis upon State chemists and guard against adulteration. The Horticultural Board is given full power to attempt keeping pests in check, and liberal appropriations are made. A Grain Commission was also appointed. The new Adjutant General is an officer of the regular United States service. Other measures that became laws were as follow:

To provide for diking districts.

To compel street railway companies to require not more than ten hours' labor in twenty-four.

To punish deception in the sale of nursery stock.
Relating to the descent of real estate of deceased ersons.

Creating a professor of veterinary science, to be added to the regular Health Board.

To amend the act for the preservation of large game.

To provide for State grain weighing and grading.
To grant title to land conveyed to aliens prior to
the adoption of the State Constitution.

To provide for creating drainage districts.

For the relief of innocent applicants for the purchase of tide lands.

To prevent destruction of game on certain islands.

For the protection of Eastern oysters.

For the protection of trout.

Exempting the proceeds of life insurance from liability for debt.

To prohibit minors entering saloons.

To amend the act relating to the purchase of jute

and other fabries.

To amend the act relating to the organization of

corporations.
Relating to trade-marks.

To establish the legal rate of interest in the State at 8 per cent. The contract rate may be as high as 12 per cent.

To punish fraud in the sale of stock.

Authorizing the establishment of public libraries in cities.

Establishing a fiscal agency in New York.

To prevent the spread of contagious diseases among cattle.

State Lands.—The Land Office business shows an increase of immigration. For the month of July, at the Olympia Land Office, the total number of acres sold was 4,134-34, for which \$6,267.05 was received. There were 8 homestead entries, comprising 783-54 acres; 58 final proofs, covering 8,397-37 acres; 6 timber-land entries; and 1 military land location.

Harbor Improvements.—The harbor at Olympia has been deepened to 12 feet. The appropriation was exhausted by March 1. The report of the engineer, Capt. T. W. Symonds, in charge of the improvements save :

The water way connecting Puget Sound with labor Union and Washington contemplates the estates to a of a ship canal to connect the waters of the labor with Puret Sound. A preliminary survey was made under the appropriation of law, and the work of last come was devoted to a verification of the surveys and to preparation for securing the right of way. This work is still in progress. The procurement of right of way is a work of considerable magnitude and expense.

The river and harbor appropriation passed in December included additional appropriation for

Hoquiam.

State Capitol. - The foundation of the Card. tol was completed June 13. The Capitol Commission resolved, in December, to issue the Capitol warrants in one block, and the legality of their act was laid before the Supreme Court, which sustained them in their intentions as proposed, and as firms were found ready to pay cash for them at par, the letting of the contracts was assured, and the next session of the Legislature is to be held in the new building.

State Institutions.—The State has property

of great value, as follows:

Penitentiary at Walla Walla, farm and grounds, jute mill, brickyard, buildings, and other improvements, \$504,243.09.

Western Washington Hospital for the Insane, at Fort Stellacoom, lands, buildings, furniture, etc.

\$298,154,44.

Eastern Washington Hospital for Insane, Medical Lake, buildings, lands, live stock, water plant, and furniture, \$237,886.
State University, Seattle, old and new sites, old

and new buildings, library, laboratory, etc., \$751,000 Agricultural College, Pullman, buildings, farm and

campus, equipment, sewer system, \$1,000 School for Defective Youth and Feeble-minded Children, Vancouver, buildings and grounds and

furniture, \$134,000.

Reform School, Chebalis, buildings and improvements, furniture and stock, land, \$67,000.

Soldiers' Home, Orting, land, buildings, water plant, etc., \$53,155.37.
Normal School, Ellensburgh, buildings and grounds.

equipment and furniture, \$71,000. Normal School, Chency, site and grounds, equip-

ments and furniture, \$14,000, State Fair, North Yakima Yakima, 120 acres, race track, stalls, etc., \$47,000.

Capitol, buildings and grounds, \$150,000

The total value of these institutions is \$2,452,000 pm.

Education .- The State Superintendent of Public Schools apportioned in September to the various counties their shares of \$30,552.85, to be used for school purposes. King County received \$4,360.70, and Franklin \$34.30 The total school census figures were 119,347

The State University has recently been placed in position to make rapid progress. In addition to its generous endowment of public lands in cluding a site of 320 acres in Scattle and ace buildings, it has received an equipment of the best and latest new apparatus. It specied Sept. 3 with 500 students. Dr Mark W Har-rington, late chief of the Weather Bureau at Washington and Professor of Asia nome of University of Michigan, is the newly clearly president.

spurred England and France to extend their passessions, and the rivalry between the three powers that began with exploring expeditions and the securing of treaties from the native chiefs took the form of military conquests when the doctrine of effective occupation was adopted in African international law. The powers were compelled to agree upon conventional boundaries not only for their possessions on the coast, but for their spheres of interest, because Algeria and the Congo State were not delimited, the coasts faced west, south, and southwest, causing the Hinterlands to overlap, and 2 powers were established on the Niger, and 2 also on the Congo. The northern boundary of the Congo State was defined in a convention first made between the International Association of the Congo and Germany, on Nov. 8, 1884, and signed by France and Portugal in February, 1885. The British Royal Niger Company, first organized in 1882, obtained in 1884-86 about 300 treaties from native chiefs, covering Borgu and Sokoto, and the whole basin of the middle Niger and the Benue, thus defeating German hopes of trade and colonization and endeavoring to thwart French expansion in the Soudan. The company obtained a royal charter on July 10, 1886. By an agreement made with Germany by the British Government in August, 1886, the line between the sphere of the Niger Company and Cameroons was to be drawn from a point on the Cross river to some point on the Benue, east of Yola, which was fixed at a point near the mouth of the Faro by the supplementary agreement of Nov. 15, 1893, while the delimitation was further extended to a point on the southern shore of Lake Chad, about 40 miles east of Kuka, the capital of Bornn. By an agreement concluded between the English and French governments on Aug. 5, 1890, the limit between their spheres is a line from Say, on the upper Niger, to Barrawa, on Lake Chad, drawn so as to leave to the Niger Company all that properly belongs to the Kingdom of Sokoto. An agreement was made between France and Germany in 1894, by which Germany abandoned to France the Hinterland of the Cameroons, excepting the trade route to Lake Chad, permitting the French to extend the French Congo territory northward behind the Cameroons and east of the Shari to Lake Chal, and ultimately, if they forestall the English in Bornu or Wadai, to join their possessions on the Congo with the French Soudan, thus shutting out England from the central Soudan. an londing in a continuous colonial empire the transport possessions on the Senegal, the Ivory bouch Soudan, the Sahara, and Algeria. a tof the Sahara, north of the French to Sahara, from Cape Blanco to Cape England has some territory, has below Spain, which claims Adrar in the has not yet come to an agreeto decrease the second in these territories, or to decrease the action of the second in these territories, or to decrease the second in 1894, the Cavally river as to be the boundary between their territories and the second in 1894, and the districts behind I. I - that that were occupied

by the Sofas of Samory were acknowledged to be within the French sphere. In the same year the French republic made a treaty with the Congo State, conceding to the latter territory in the Welle region occupied by Congo troops, though it is north of the 4th parallel.

The extent of the Spanish protectorate is 243 000 square miles, with perhaps 100,000 inhabit-ants. The French colony of Senegal has an area of 14,700 square miles, and a population of 174,000. Including its dependencies, its area is 57,900 square miles, with a population of 1,029,-540, not including protectorates having an area of 96,500 square miles, and about 80,000 popula-There are 246 miles of railroad in Sene-The Rivières du Sud and Futa-Jalon territory have an extent of 42,600 square miles, and about 600,000 inhabitants. The settlements on the Ivory Coast are Grand Bassam, Assinie, Grand Lahou, and Jackeville. From these a French protectorate has been extended over the Kingdom of Kong, and into the Soudan. On the Gold Coast there are French establishments at Porto Novo, Kotonu, Grand Popo, and Agoué, and a protectorate has been imposed upon the Kingdom of Dahomey, which has a population of about 600,000. The extent of the French possessions here is undetermined. The English seek to cut them off from those on the upper The French Soudan embraces all the region of the upper Senegal and the upper Niger. The annexed territories on the Senegal have an area of 54,000 square miles, and 360,000 population. The protectorates were estimated in 1891 to have an area of 230,000 square miles, and 2,500,000 population. The French Congo, including Gabun, with the territories on the Ubangi, has an area estimated at 300,000 square

miles, with a population estimated at 6,900,000.

The British Niger protectorates are estimated to have an area of 500,000 square miles, with over 20,000,000 inhabitants; but this includes large areas that the French have not conceded to England. The British colony of Gambia. surrounded by French territory, has an area of 2,700 square miles, and a population of 50,000, including 62 whites. Sierra Leone has an area of 4,000 square miles, and had 74,835 inhabitants in 1891, of whom 224 were whites. The protected territories have an area of 11,000 square miles, and 105,000 inhabitants. The Gold Coast colony and protectorate, including Ashanti, are 46,600 square miles in extent with an estimated population of 1,474,000. Lagos, an island on the Slave Coast, with the protected territory on the mainland, has an area of 1,000 square miles, and about 100,000 inhabitants. Behind it is Yoruba, having 19,000 square miles, and 3,000,000 inhabitants.

Near Gambia, and inclosed likewise by French possessions, is Portuguese Guinea, for which an area of 14,000 square miles is claimed, with 800,000 inhabitants.

The German protectorates of Togoland and Little Popo have an area of 19,660 square miles; and 800,000 inhabitants. The area of Cameroons is 160,000 miles, and the population is 2,600,000.

The independent republic of Liberia has been diminished by English encroachments from Sierra Leone, and by French annexations in the

interior and on the Ivory Coast. The estimated area is 14,360 square miles, and the population a 1.068,000, of whom 18,000 are descendants of

liberated American slaves.

Dahomey was conquered by the French army ander Gen. Dodds in 1892 and 1893. King Behanzin was deposed, and his realm was divided into 2 kingdoms—Abomey, over which Agoli Agho, Behanzin's brother was made king on Jan. 15, 1894, and Allada, where Ganhu Hugnu, a fetish priest, was crowned. A French protectorate was secured by treaties signed on Jan, 29 & Abomey, and on Feb. 4 at Allada.

In the Soudan Col. Achinard, Governor and

ommander of the forces, had strict orders om the French Government not to extend the moh occupation. Nevertheless Col. Bonnier. rench occupation. Neverther Niger with a sho was operating on the upper Niger with a sho was operating on the upper Niger with a otilla against Samory, marched up to the city

Timbuctoo and took possession on Jan. 11, L Finding his position menaced by Tuarega, e led out a detachment of 70 native sharpcoters, with 10 European officers, for the purpose of warding them off and of obtaining food applies, leaving the main body to hold the town. On Jan, 15 Col. Bonnier's force was surprised at Goundam by Tuaregs, and was annihilated. The French Government sent re-enforcements to avenge the disaster and to hold Timbuctoo, which could not now be evacuated without loss

of prestige. The relieving column under Col.
Journe cleared the country of Tuaregs.
Samory, Emperor of the Sofas, the last of the udan conquerors, was expelled from the Niger valley and driven southwestward into Kong by the forces of Col. Combes early in 1893. Capt. Briquelet established a station at Erimankono, on the border of Sierra Leone, to prevent Billali, amory's principal lieutenant, from obtaining rms from British merchants. Col. Achinard at the same time conducted an expedition against Ahmadu, the old enemy of the French, who had mounted the throne at Warina, in the same re-gion. The presence of French troops there caused the British colonial authorities to display military activity on the frontier, which, afough a conventional line, was not precisely nown. In the Niger basin also, and in Gam-ia, the British developed a military strength far beyond any they had shown before, though ot equal to that of the French, who had ord an efficient native colonial army, while the British had to depend on negro troops imorted from the West Indies and on marines.

British expedition was sent from Sierra Leone Yenna. On Dec. 23, 1893, a small detachment of French troops under Lieut, Maritz was anibilated by a Jamaican regiment under Col. A. B. Ellis in Warina, each mistaking the others for the common enemy. On the British sale Capt. Lendy and 26 men were killed. Both the British and the French Government claumed that the incident occurred within its own sphere

In January, 1894, the British defeated the Sofas and captured Kerra Yemma and Warna. proclaiming a protectorate over the territors raversed, including the Sanda district of the Konno country. On Feb. 3, 1894, a see nel collin on occurred between the French and the ling ish police, who had established themselves at

Samu, within the ophice that it is to be to be and formed the nations to the and men a ... mich, in which 5 were billed in the f was also held by the 2 governments to be not a mileapprehements took Manden who had not ordered to the Clangs to take commanded the forces there and recoduct an expendition to the upper Welle, if and also to prantisale the finition Gazel country and excupy at temperature as our terlian in behalf of Egypt and the Soultan, so the English featerl, was send inchesed to operade form the Ivery Court against the modus, and these prevent the British from substancy them and susping benefits therefrom. When tad Manned as rived at Grand Bassam carry to 1995 he found that no adequate provision had been made for the advance into Kong. The supplies and means of transport were not sufficient for the medicileation of more than 300 men out of more than 1,000 placed under his remainsaid. With this small force he undertook to advance and hegis. the campaign. Samery was more powerful than ever, having an army of 12,000 men well around and well officered, and when tol. Monday found himself confronted with a force so sequence he retreated, abandoning three quarters of his baggage and guns. When he was already in full retreat, orders came from France coundersumeding the expedition.

On Jan. 21, 1005, British and French phine potentaries signed at Paris a new boundary agreement regarding the Heaterfood of Surva Leone. The line follows the watershiel between the Mellakori and Grande Scarcine steem. the Thalway of the Moin the right hank of the Grande Scarcica, cresses thus first as a line drawn to the river Kita, follows its Phadony down to the Lolo, runs straight to a good on the Petite Scarcies 4 miles senth of 10" of month latin tude, follows the Thalway of the Prine Sourcius up to that parallel which forms the honoidary as far as its intersection with the watershood of the Niger, and follows this watershiel, terminaling at the parallel of latitude that passes through the source of the Tembiko or hose waters of the

In the beginning of 1904 a fewer was sent to remodulate Bestock authorits on the township The triage attacked First what, the promined chief on the river, who would not not now holyn British sovervognty although took 10 to buil deafferent his capital to sears bullers. He sought and among the Normanine dan chiefs on French heridays for a fresh campassen against the Hestock but was made a getatwist the Hestonic made a trends with Moreone Milliah, whem they recognized as the king of the natives on the Courseline.

In the spring of 1964 oir Presents South, heignited general of countabulary, conducted in expedition to the bearings of Ashmeti fee the partene of imendportation contain tribus than v willing to accord British rule instead of to the

the King of Kumassi. The annexation of these tribes was accomplished without bloodshed, and a Houssa garrison was left at Attababoo.

By the Franco-German agreement of March 15, 1894, the fifteenth meridian east of Greenwich is recognized as the eastern limit of the German sphere of influence from 4° to 8° 30' of north latitude. The southern boundary of the Cameroons protectorate was defined by the Franco-German agreement of Dec. 24, 1885, as running from the mouth of the Campo river due east to about 15 of east longitude. Since then the French expeditions of Savorgnan de Brazza, Mizon, and Maistre have penetrated the German Hinterland from the Ubangi up to the Benue and Lake Chad, establishing sta-tions on the Sanga river and the station and ivory depot of Gasa and making treaties with the local chiefs on the Sanga and Shari rivers and in the intermediate country. The German expeditions of Kund, Tappenbeck, Zintgraff, Gravenreuth, and Morgen never penetrated beyond the twelfth meridian in the south or the longitude of the English station of Yola in the north. The English were chagrined at the abandonment of the Hinterland to France in the new treaty. Kunde is reserved to France, although it was found to lie just west of longitude 15°. The German frontier is extended east of the fifteenth meridian in the south, so as to give to Germany the right bank of the Ngoko for a part of its lower course and 30 kilometres of the right bank of the Sanga for the development of the commercial interests of eastern Cameroons. In the north the German sphere is contracted above latitude 8° 30', where the line runs northwest to Lame and Bifara, which are included in the French possessions, and then due north to longitude 10', giving France access to the Benue through its tributary, the Mayo Kebbe. It follows the tenth parallel eastward to the Shari beyond the seventeenth meridian. and includes the whole left bank of that river down to Lake Chad, thus giving to Germany a part of the territory of Bornu and the south shore of Lake Chad from the mouth of the Shari to the boundary of the English sphere, west of Deggela. The treaty secures to Germany the right of navigation on the Sanga and on the Shari, affording commercial communications with the Congo basin and the central Soudan.

The German administration in Cameroons received in 1804 a severe setback. The Soudanese soldiery mintinied and seized the arms and amminimum. They were subdued, but an investigation into the causes of the outbreak revealed the atrocious cruelty of the German officials, estendly Leist, the head of the administration, who was promptly dismissed when it was proved that he that been guilty of inhumanity not only to the subflers and native men, but to women.

The masking of 1895 the Governor of the Course of Herr von Puttkamer, carried on a campaign against the Bakoko tribes in the interper. The German forces stormed 4 of their strong of the carried and killing 200

tribust

For two year the British carried on active operations for the subjugation of the Egbas and Jebus back of Lagss. In 1894 a naval force was sent to Bana to reduce the chief Nana,

who refused to submit to the authority of the Niger protectorate. His town was stormed on Sept. 25, after which he delivered himself up at Lagos. In the autumn a British official named Ferguson proclaimed a protectorate over Salaga and other districts northwest of Togoland, although these were declared neutral in an Anglo-German agreement made in 1888. Herr Kling, Lieut, von Karnap, and Dr. Grüner led German expeditions into the *Hinterland* of Toga, while Capt. Decœur, M. Alby, Lieut. Baud, and M. Ballot, Governor of French Dahomey, as agents of France, traversed the same regions, and all obtained treaties from local chiefs in respect to some of the same territories that the mulatto Ferguson had negotiated for in August, 1894. Capt. F. D. Lugard, following Ferguson, obtained new treaties in Borgu. The Germans claimed the whole empire of Gando, which they said was independent of Sokoto, and also the lands of Horin, Lokoja, Saria, and Keffl. They were extremely desirous of extending their protectorate to the Niger, but the French were unwilling to concede all their claims, because these would sever the Dahomey protectorate from the Soudan. In February, 1895, Capt. Toutée, crossing from Dahomey to the Niger, concluded various treaties. The French claimed Niki and Bussa as the *Hinterland* of Dahomey, but the English held that the treaty line from Say to Barua precluded them from acquiring any rights within the bend of the Niger or even in Bornu or Adamawa. The King of Bariba, or Borgu, signed a treaty for Capt. Lugard on Nov. 15, 1894, at Niki; but Capt. Decœur, who obtained a political treaty on Nov. 26, believed the English document to be a commercial arrangement only. Lieut. Mizon had obtained a protectorate treaty from the ruler of Adamawa in August, 1893, and had left a force at Yola; but the English claimed Adamawa as a dependency of Sokoto, although they had previously conceded it to Germany, and Germany had resigned her rights to France. The French and the Germans persistently denied that the British Niger Company had ever concluded a political treaty with the Sultan of Sokoto or the other potentates, asserting that the treaties simply extended to Europeans in general the right to trade subject to the payment of tolls to the native rulers. Many complaints have been made, both by the French and by the Germans, of the stopping of trading vessels and expeditions by the Niger Company in contravention of the Berlin act of 1885, which made the Niger free to the flags of all nations. Indemnity has been paid for the illegal seizure of vessels; but this has not deterred the company from repeating the act in order to defeat the commercial and political designs of its foreign competitors. Toward the close of 1894 a French gunboat, the "Ardent," entered the Niger for the purpose of succoring the French post at Yola, but ran upon a sand bank, and could not be got off for six months. The French Government ordered the commander to return to the sea with his vessel, which he did as soon as the water rose. The company's officials, who had allowed the gunboat to proceed, because they had not the force to stop it, arrested a German steamer that entered the river with supplies for the stranded vessel.

Ashem, Sultan of Bornu, was defeated and his capital, Kuka, was taken by itabah, once a slave and afterward a trusted heutenant of Zobehr in the Egyptian Soudan, who, on the rise of the Mahdi, had fied with a band of fighting men and subjugated Baghirmi before he conquered Bornu. He established his rule in Bornu, imposing a tax of a dollar on every inhabitant. Kiari, nephew of the fallen sultan, raised a force to expel the invaders and attacked them several times, but was always repelled.

The French expedition from the Ubangi that

The French expedition from the Ubangi that Col. Monteil was to have led set out in October, 1894, pushed 900 miles to the northeast, and in the spring of 1895 occupied territory near the Bahr el Gazel and bordering on the country held

by the dervishes.

The people of Brass, in the Niger territory, revolted against the British authorities and pillaged the station of Akassa on Jan. 28, 1845. The rising was put down by British marines and troops of the protectorate under Sir Claude Macdonald. The British captured and burned Nimbl, King Koko's town, on Feb. 22. The hostility of the natives here and elsewhere in the forest belt was occasioned by the determination of the English to deprive the negro traders and porters of the commerce that they have always monopolized, none others being allowed to transport goods between the coast and the interior through their territory. The same cause led to the imprisonment of Nana and the rebellion of Jaja.

In February, 1894, the British Government presented to Prempeh, King of Kumassi, the remant of the Ashanti empire that was disrupted by the British conquest of 1874, an agreement to sign, accepting a British resident. This he refused to do, and on June 11 he proclaimed the restoration of the empire of his fathers and was formally enthroned as King of Ashanti. He appointed his brother and two consins ambassadors to lay his objections to British rule before the English Government. Though the Governor of the Gold Coast, Sir Brandford Griffith, re-fused permission for them to start and the British Government gave notice that no enveys would be received from a ruler so unimportant the King of Kumassi, for his title to the throne of Ashanti was not recognized, from one, moreover, who countenances human sacrifices. yet the embassy went to England and appealed to the Government for a hearing, which was refused. A British expedition was prepared, and an ultimatum was sent to King Prempeh, reiterating the former demands that he put an end o slave raiding and human sacrifices, crase hampering trade, and accept a British protectorate and a British resident who should direct him in all relations with his neighbors. In an swer to this ultimatum, which expired on the 31, the young king denied that he countenanced or permitted slave raiding or human sacrifices or hindered trade, and declared that he preferred war to resigning his prerogatives into the hards of a British agent. The king, who ruled ever an industrious population of 2,000,000 hight hued Africans, was reported to have 200000 aghting men, armed with rifles. The British expeditionary force consisted of 700 Houses troops, 500 West Indians, and 200 pa ked mach from English regiments. The command was

Trendal has an area of 1,754 square miles, with 220,285 inhabitants. Tobago, which is connected with it administratively, is 114 square miles in extent, with 18,353 inhabitants. There mere 7,568 births and 5,987 deaths in Trinidad in 1893. There are 173 schools, with 18,483 pupils. The pitch lake in the center, which is lease 1 to an American company, produced 90,204 tons of asphalt in 1893. There are 54 miles of railroad and 136 miles of telegraph. The Governor is Sir F. Napier Broome. The revenue of Trinidad in 1893 was £497,396, and the expenditure £488,503. Imports amounted to £2,270,885, and exports to £2,320,824. The chief exports of Tobago, which produces cotton, tobacco, and sugar, were valued at £25,429.

Of the Windward Islands, which have Sir Charles Bruce for their Governor, Grenada has a rea of 133 square miles and 56,413 inhabitants; St. Vincent, an area of 132 square miles and 40,054 inhabitants; and St. Lucia, an area of 243 square miles and 43,310 inhabitants. The products are sugar, cacao, cotton, spices, coffee, rum, arrowroot, logwood, and timber. The finances and trade of the islands in 1893 were

as follow:

ISLANDS.	Revenue.	Expendi-	Imports.	Exports.
~t Lucia %1 Vincent	£51,568 28,495 59,210	£49,271 29,589 58,039	£165,978 98,424 166,679	£178,429 114,694 816,063

Danish Colony.—The islands of Santa Cruz, St. Thomas, and St. John, constituting the Danish Antilles, of which C. E. von Hedemann is 6 overnor, have an area of 118 square miles and its pulation of 32,786, consisting almost entire-political engaged in the cultivation of the first same. The imports in 1893 were valued 417,786 kroner, and the exports at 195,511

Dutch Colony.—Under the Government at the last time islands of Curaçoa, Bonaire, the state is Saba, and the Dutch part.

products besides sugar are cotton, ramie, tobacco, coffee, cacao, rubber, cattle, corn, rice, and potatoes. The imports amounted to 20,-456,000 francs, and exports to 15,164,000 francs in 1891.

WEST VIRGINIA, a Southern State, admitted to the Union June 19, 1863; area, 24,780 square miles. The population, according to each decennial census since admission, was 442,014 in 1870; 618,457 in 1880; and 762,749 in 1890.

Capital, Charleston.

Government.—The following were the State officers during the year: Governor, William A. MacCorkle. Democrat; Secretary of State, William E. Chilton; Treasurer, John M. Rowan: Auditor, Isaac V. Johnson; Attorney-General, Thomas S. Riley; Adjutant General, J. A. Holley; Commissioner of Labor, J. M. Sydenstricker; Superintendent of Public Schools, Virgil A. Lewis; Bank Examiner, C. A. Wever; State Librarian, E. L. Wood; Secretary of the Agricultural Board, C. C. Brown; Meteorologist, W. W. Dent; Secretary of the Board of Health, N. D. Baker, M. D.; State Veterinarian, E. E. Terry; Secretary of the Fish Commission, C. I. White; Commissioner of Immigration, Thomas Popp.

Popp. Finances.—The State is out of debt. The estimated receipts and expenditures for the fiscal year ending Sept. 30, 1895, were as follow: For the State fund, \$656,600, with balance of \$127,-138.36, making a total of \$783,738.36. The estimated charges are \$577,318.30, leaving a balance of \$206,420.06. For general school fund, \$351,-883.30, with balance of \$313,683.40, making a total of \$665,566.70: for school fund, \$28,000, with balance of \$282,745.91, making a total of

\$310,745.91.

State Institutions.—The Legislative Committee reported the Weston Hospital as over-crowded. The hospital at Spencer had 70 men and 75 women patients. The Penitentiary reported \$4,017.05 unexpended balance and 240 convicts at work and 136 unemployed. The Colored Institute, at Farms, had arranged for the erection of the new Mechanical Hall for which \$6,000 had been appropriated. The Reform School had a balance on hand of \$12,581.44.

Education.—The university has a new chemical laboratory, and \$40,000 has been expended upon new machinery in Mechanical Hall. Part of the funds for the university is supplied by the State, and it also derives \$20,000 a year from the Morrill fund for scientific instruction, besides the interest on the original endowment. The agricultural experiment station is maintained by the United States Government.

A preparatory branch of the university, for which the Legislature appropriated \$13,000, is

to be located at Montgomery.

An officer of the United States army is in command of the cadet corps. The enrollment of the university was 340, an increase upon any previous year. The whole cost of the buildings \$200,000.

Legislative Session.—The Legislature was convened in January, and adjourned in March. Its most important enactments were as follow:

Enabling an insolvent debtor to prefer a creditor for the purpose of giving security for loan made at the time of the transaction, but not to prefer a cred-

itor as a pre-existing debt.

Providing that two days' work shall be performed on the public roads before the first day of June in each year.

To prevent the owner or occupant of any shouts boat from anchoring his boat on real cotate belongitud

to another for more than twelve hours.

Establishing the county of Mingo out of part of the county of Logan.

'roviding that towns of fewer than 3000 viders than hold municipal elections under the law in force prior to the adoption of the Australian ballot avetern.

Reducing the number of regents for the State I mversity from 18 to 9, 5 of whom are to be appointed from the dominant political party; and requiring the regents of the State Normal School to be equally divided between the two political parties.

Amending the divorce statute so as to enable one to get an absolute decree of divorce on the ground

of cruelty or ill treatment.

Requiring railroads to use the classification of freight used by them for interstate traffic, and preribing a tariff increasing slightly the charges on short hauls and decreasing the charges on long hauls.

Making it unlawful for any railroad company to engage in the business of buying and selling coal or to lend its credit or money to another engaged in the business

Authorizing the county court of any county to issue bonds for the purpose of funding its indebtedness.

To authorize married women to convey property by an attorney in fact; the property of a married woman, when living apart from her husband, not to be subject to her husband's disposal nor liable for his

Fixing the fees for eatehing and securing floating

Providing for a series of text-books for the public schools of the State, and fixing the price therefor.

Imposing a license tax of \$500 on eigarette dealers. Allowing a lot owner in property where the entire of taxes to redeem such part of the property as he may own instead of the entire tract.

Among the charters amended were those of Charleston, Huntington, and Parkersburg.

Rallways.-The total certified assessment for 1895 of all the property of the various railresses in the State is \$22,432,791. The mileage is

about 2,000.

Several railroads are being built to open up rich territories. Among them are the road from Charleston to Sutton, up the Elk, to connect with the West Virginia and Pittsburg, thus making a line north and south through the center of the State; the West Virginia Short Line road from Clarksburg to New Martinsville; and the Chesapeake and Western to extend from the Chesapeake Bay through Fredericksburg and Harrisonburg, Va., into the eastern coal field. In addition there is a road up Guyandotte river from Huntington, to extend eventually into Virginia; a road from Morgantown to king wood; a road from Burlington to a rich terri tory in Randolph County; the Carro and Kanawha Valley road; and the West Virginia Southern, which is now being constructed in Lewis creek from Brownstown and was men up a coal and timber territory.

Finances,-From the report of the Treasurer for the fiscal year ended Sept. 30, 1895, the following statements are taken: The amount on hand in the general fund at last settlement, Sept. 30, 1894, was \$977,315.71; the receipts during the year from all sources were \$1,788,809.52. The disbursements were \$2,729,506.73, and the balance on hand at the close of the fiscal year was \$36,618,50. Among the items of disbursement are the following: Salaries and permanent appropriations, \$200,641.94; legislative expenses, appropriations, \$200,041.94; legislative expenses, \$161,411.68; State Hospital for Insane, \$113,-702.79; Northern Hospital for Insane, \$137,-694.55; State Prison, \$87,399.97; School for Deaf, \$41.050.58; School for Blind, \$30,978.84; Industrial School for Boys, \$74,161; State public schools, \$47,036.47; clerk hire, \$66,594.16; labor about the Capitol, \$48,821.38; transient laborers, \$11,294.11; militia, \$93,684.55; free high schools, \$47,600.08; maintaining chronic insane in county asylums, \$301,796.80.

The school fund amounted to \$3,371,657.94; the university fund to \$212,204; the agricultural fund to \$271,270.06; the Normal School fund to \$1,819,421,20; the total investment of

trust funds being \$5,674,553.20.

The amount paid by railroad companies during the fiscal year was \$1,175,752,52; by telegraph companies, \$9,999.45; by telephone companies, \$9,838,99; by sleeping-car companies, \$503.80. Insurance licenses amounted to \$131,-574.60, and peddlers' licenses to \$19,663.38.

The tax levy for 1895 amounted to \$1.372,713, which was divided as follows: One-mill tax, \$603,473; certificates of indebtedness to school fund, \$157,570; university tax, \$256,476; normal-school tax, \$120,694; free high schools, \$50,-000; fifth normal school, \$10,000; manual-train-1112 schools, \$2,500; Feeble-minded School, \$100,000; special for normal schools, \$72,000.

The report of the Railroad Commissioner for 1801 says that the mileage of the State is 578 times, an increase of 219 miles. The capital word licht, \$169,400,000; unfunded debt, \$15000, east of railway properties in the \$23,000,000; cost per mile, \$40,000. The s 6 600 13. There were 116 persons of government on the tracks.

Aducation. The apportionment of the un f r 1865, amounting to \$602,-If the basis of 89:431 cents 1 - age in the State. The last I. rand the establishment of c - 3,000 ficher-minded per-A NA'. t was related \$100,000 SOTIS ITS ME therefor, a The decided upon in July pewa Falls

as the site for the new normal school, contingent on the paving by the town of the streets sur-

rounding the school.

State Prison.—The Legislative Committee appointed by Gov. Peck to visit the charitable and penal institutions of the State reported to the Legislature of 1895, condemning the State Prison at Waupun, on account of its unsanitary and overcrowded condition, as wholly unfit for a reformatory, and advising the erection of an intermediate prison in a central county.

Census.-A State census taken this year gives the official population as 1,937,915, an increase of 374,502 since the taking of the State census in 1885. The expenditure from the general fund for this work this year was \$77,219.84. The Legislature provided that as soon as the result of the census was known an apportionment committee should prepare a bill districting anew the members of the Senate and Assembly according to the number of inhabitants. This apportionment was made in November.

The Gold Cure .- A law passed by the last Legislature provided for compulsory subjection of inebriates to this cure. Statistics gathered in October show that in only 25 of the 75 counties have judges availed themselves of the law; in these the number of treatments was 137 at a cost of \$17,030. Objection to the law is made by many magistrates on the ground of the large expense involved, as well as a belief that it is

unconstitutional.

Immigration.-In pursuance of the effort to secure settlement of the 25,000,000 acres of unoccupied land in Wisconsin, an immigration commission visited New York to make a personal investigation of the character of the immigrants and other matters connected therewith, and to provide for the circulation among desirable immigrants of literature giving facts relative to the lands they desire to settle. this purpurse a handbook of was prepared.

Dairy Industry.-Wisconsin has \$160,000.-000 invested in the dairy industry, and the milk products of 1894 aggregated \$30,000,000.

Treasury Cases.—As stated in the "Annual Cyclopædia" for 1893, ex-State Treasurers were under obligation to repay to the treasury interest collected and used by them accruing from the deposit of public funds, with interest thereon. The last Legislature passed an act releasing ex-Treasurers Baetz and Kuehn from judgment in the treasury cases, and ex-Treasurer McFetridge from the balance over principal and 3-per-cent. interest. It was claimed that this act was contrary to the Constitution; but the Attorney-General decided that it was constitutional, and took action accordingly.

Decision.—The Supreme Court sustained the validity of the law which provides that life imprisonment works absolute divorce without fur-

ther legal proceedings.

WYOMING, a Northwestern State, admitted to the Union July 10, 1890; area, 97,890 square miles. Population in 1890, 60,705. Capital, Chevenne.

Government,-The following were the State officers during the year: Governor, W. A. Richards. Republican; Secretary of State, Charles W. Burdick; Treasurer, Henry G. Hay; Auditor, William O. Owen; Attorney-General, B. F.

Fowler: Adjutant General, Frank A. Stitzer, Superintendent of Instruction, Estelle Reel, Chief Justice of the Supreme Court, H. V. S. Groesbeck; Associate Justices, A. B. Conway, C. N. Potter; Clerk of the Supreme Court, R. H.

Redpath.

Finances. - The Auditor's report gives the following information as to the financial condition of the State: Balance in the treasury Sciel. 30, 1894, \$148,336.16; moneys received from all sources during the year ending Sept. 30, 1845, \$184,490,34; total receipts, \$332,825,50. The disbursements were: General fund (on account of appropriations), \$160,249.69; Capitol tax, \$5,618.97; bond tax (interest on State debt), \$19,200; university income tax, \$3,691.71; stock indemnity, \$1,507.81; fund for the insane, \$10,-405.04; hospital maintenance tax, \$6,055,321; 405.04; hospital maintenance tax, \$6,055.33; hospital building tax, \$275.86; Capitol building fund, \$1.893.37; inspection fund, \$790.65; Rawlins penitentiary building tax, \$12,494.31; total disbursements, \$222,182,74; cash in treasury, Sept. 30, 1895, \$110.642.76. The annual expense is materially increased every alternate year by the assembling of the State Legislature, and in this year's expenditures are included the expense of the third Legislature and the payment of bountles on predatory wild animals, the latter a charge heretofore borne by the several counties,

The balances in all appropriations Sept. 30, 1894, and the appropriations since made amounted to \$380,995,39; there was paid over during the year \$160,249,69; restored to general fund, \$4,938,20; and there remained Sept. 30, 1895, balances amounting to \$215,807.50. For the construction of public buildings \$17,695.30 was paid out during the year, making the total expense of construction since 1883 \$564,262.30. Of this sum, \$297,273.49 has been expended for

the Capitol at Cheyenne.

Valuation.—The property valuations of 1895 amounted to \$29,838,938,79, a gain in value during the year of \$640,897.59. The valuation of land and improvements on land was \$6,857,-The valuation of 698.69; of town lots and improvements thereon, \$5,497,842.49; of capital employed in merchandise and manufactures, \$1,488,271.69; of moneys and credits, \$524,098,84; of stock in corpora-tions, \$307,795.02.

The rate of the State levy for 1895 was 6-2625 mills, the assessment amounting to \$186,866,35 This levy includes a levy of a half mill authorized by the third Legislature for the support of State charitable institutions, which levy produced \$14,919.46. The total tax to be collected is \$845,000, exclusive of the school poll tax in Albany and Fremont Counties. The amount of delinquent taxes Sept. 30, 1895, was \$17,321.57. and \$395,32 was paid during the fiscal year as interest on delinquent taxes.

Railroads and Telegraphs .- The number of miles of railroad operated in the State during 1895 was 1,177:54, valued at \$7,127,351, an in crease in mileage over 1894 of 20 19 miles, and a decrease in valuation of \$49,461. The value of Pullman palace cars was \$200 001 and mileage proportion of the value in Warning was \$84,037, the mileage for these being with a

as a forage plant. It was expected to grow with such luxurance as to furnish shade in summer for cattle and a wind break in winter, as well as food, but the experiment station reports: "Our trials indicate that sacaline is not sufficiently hardy to be of any practical value in any part of the State."

Report is also made that both the Canada and the Russian thistle have secured a foothold in

Wyoming.

Indian Troubles.-In the early part of the summer Bannock Indians and others, from reservations in Idaho, entered Wyoming and hunted, thereby breaking the laws for the preservation of game. Certain of the Indians being arrested by the constable of Jackson Hole-which is south of and very near Yellowstone Park-tried to escape, when one Indian was killed and six others were wounded. This was on July 13. The settlers at Jackson Hole organized to drive the Indians from the Hoback basin, where they were assembling, and the Governor of Wyoming demanded of the General Government that it should return these Indians to their reservations in other States. Cavalry and infantry were sent to the neighborhood, when, within a reasonable period, the Indians peaceably dispersed. The Indians claim that they received insufficient rations and were hunting for necessary food on unoccupied land, as they had a treaty right to do. The settlers assert that they were killing game for the hides. The United States deputy marshal who investigated the trouble says, in his report, that "the killing of game by Indians and the increasing number of tourist hunters threatens to deplete the region of big game-deer, elk, moose, etc .- so as to jeopard the occupation of the professional guides at Jackson Hole. It was decided at the close of last season to keep the Indians out of the region this year, and the several events this summer are the results of earefully prepared plans," He also says it was decided that some one should be killed, so that the matter could be brought before the courts, and he justifies the action of the Indians, of whom 3 in all were killed. The State contends that the lands on which the Indians were hunting were not unoccupied; that the admission of Wyoming to statehood gave the State the right to make proper police regulations; and that the game laws are proper police regulations, and apply to Indians as well as to white men.

Legislative Session.—The third Legislature convened on Jan. 7, and continued in session forty days, during which period it enacted 126 laws. Among these was a general law for the incorporation of cities having over 4,000 population; an act allowing verdicts to be rendered upon a concurrence of three fourths of the jurors; an act providing that a party producing a witness is allowed to impeach him by proving prior contradictory statements; and an act whose object is to preserve the few remnants of the buffalo by an absolute prohibition of the killing of that animal. Provision was made for the establishment of a Home for Soldiers and Sailors, with an appropriation of \$7,500, and \$2,500 was voted for the construction of a fish hatchery at Sundance. A bill was also passed accepting the 1,000,000-acre grant of arid land under Carey act, and providing terms and conditions under which the land shall be selected and reclaimed, and an act to regulate the formation and procedure of guarantee and surety companies was passed.

Since 1893, when the Legislature failed to elect a Senator, Wyoming has been represented by Joseph M. Carey only, whose term expired in March of this year. On Jan. 8, 1895, the Republican members of the Legislature in caucus nominated Clarence D. Clark for the short term, to end on March 3, 1899, which seat was vacant, and nominated Francis E. Warren to succeed Joseph M. Carey, who did not get a single vote. The opposition to Senator Carey was due to his votes in the Senate against the free coinage of silver. On Jan. 22 both houses proceeded to an election with the following result: Short term—Clark (Republican), 47; Samuel T. Corn (Democrat), 6. For six years from March 4, 1895—Warren (Republican), 47; William H.

Holliday (Democrat), 6.

Y

YACHTING IN 1894 AND 1895. Followm2 the unprecedented activity of the racing so on in 1893, as described in the "Annual" for has year, there came a period of comparative ir at least of indifference on the part of 2 mind public. It was then believed that the sailing yacht had reached the outlay was no longer justified the pulling. The building of 9 large to American and 4 British market for such craft. your a vessel of this size has and served her purpose in 102 Me " America's " cup she it is tre yas being, and is (1 - 1) y i - homer, or in some way Bela; del I to Provi er.

In Britis columns are mewhat different, say - h a coast of the United

Kingdom is within easy sailing distance, and it is possible to arrange a series of races offering attractive inducements to vachtsmen throughout the season. The Prince of Wales's cutter "Britannia," built after G. L. Watson's design, had unequaled success as a sailing yacht. At the close of the season of 1895 she was easily champion of the British sailing fleet. Some of her successes were no doubt due to the intense loyalty of the British yachting public to the prince. one of the "Britannia's" crew is the highest honor within the reach of the English sailorman, and her outfit is probably the most perfect, from the yachtsman's point of view, that is attainable in the wide world. Beyond all this, however, is the undoubted excellence of her model and her proverbial "luck," which is a powerful element in the estimation of seagoing folk, however much it may be despised by the matter-of-fact

landsman. The "America's " cup is the only terrer that appears to be beyond "Britannia's " reach There have been rumors at times that she would cross the ocean and at least try for this critical trophy, but the regrettable incidents of 1805 have probably placed a veto upon any such un-dertaking.

"Vigilant," the winner of the international races of 1893, was for sale during the ensuing winter, and was purchased by Mr. George J. Gould, of New York, and sent across the account early in the season of 1894 to take part in as many regattas as were open to her. While she was beyond question a fast boat, she embedied a last attempt to combine keel and centerleard in one craft. Her centerboard always bothered her even in home waters, and when she reached the coast of Britain it seemed to take especial delight in justifying the distrust that the English have always cherished for that useful and effective contrivance.

Americans may perhaps be pardoned for feeling a certain pride in the fact that no American pilot has ever permitted a British cup challenger to run aground during an important race, and it is equally to the honor of British yachtemen that they used very plain language in regard to the British pilot who three several times ran "Vigilant" upon the rocks, and finally knocked the centerboard out of her altogether, disabling her for the most important race of the season-

that for the Cape May cup.

The first race for which "Vigilant" was en-tered (the Clyde Regatta of July 5) saw a grievous mishap, in which most fortunately the sole American yacht was not concerned, "Valkyric, "Vigilant's" antagonist of the year before, was run down and sunk by "Satanita." "Satanita" was laid up for repairs for some time, leaving "Britannia" and "Vigilant" to do all the ra-

eing in the 90-foot class.

Altogether they sailed 18 races, of which " Britannia won 11, "Vigilant" 6, and "Satanita" 1. Almost all the stated regattas of British waters are sailed over sheltered courses where frequent turns are necessary and where "true" winds are the exception rather than the rule. Whenever "Vigilant" had an open sea before her and a "strong and steady wind" she gave a good account of herself, "Under such conditions." wrote a British naval officer, tieurge Leigh Blake, " ' Britannia' can not look at her. all is said, however, it must be admitted that the result of "Vigilant's" expedition to British waters was not very satisfactory, though she brought home a number of very handsome silver eups to prove that she was no mean antagonist even for "Britannia" in her own home waters. It is very much to be regretted that she was prevented by the loss of her centerboard from sall ing the cross-channel race to Cherlourg and back, which would have afforded a fairer offer tunity for comparing the two leads that was

given by all the other races combust.

1895.—After his plucky but unsure and test for the "America's" cup in 1886 Lead it. raven, as has been related, liest "Valkyre II ecollision with "Satanita." He very second lenged anew for the "America's "III and III an order with his former designer. Mr. 19. Watson, for "Valkyrie III." As well as "

presence of an uncontrollable fleet of excursion steamers, special measures were taken, and some at least of the English spectators declared that they could not see that one boat was more annoved than the other.

The first race was sailed on Sept. 7. "Defender" won by eight minutes, twenty seconds. Upon the whole, the race was satisfactory, with a good sailing breeze and fair all-round conditions.

The second race was on Sept. 10. When the boats were making for the line an excursion beat lay in "Defender's "course. She avoided her, and, coming out near the line, was to the leeward of "Valkyrie," consequently having leeward of "Valkyrie, consequences, in the first of way. By a miscalculation "Valkyrie's" main boom struck "Defender's "rigging and her tannuast shrouds, "Defender's " carried away one of her topmast shrouds. "Defeuder" hoisted a protest flag, but continued the race and was beaten. Every effort was made to call the race "off" and resail it, but Lord Dunraven declined.

The third race was started Sept. 12 under what seemed extremely favorable conditions-a good breeze, a clear course, and the excursion fleet quite out of the way. After seeing "Defender across the starting line, "Valkyrie" put about and returned to her anchorage. Lord Dunraven explained this action by saying that under the existing conditions (specifying the excursion fleet) he must decline to sail any more

This decision excited much indignation in America and some surprise in England, but nothing could be done, and Lord Dunraven sailed for home.

In a few weeks there appeared in "London Field" a letter from Dunraven specifically charging that after having been officially measured the "Defender" was secretly loaded with extra ballast, sinking her 4 inches deeper in the water than when she was measured.

As this was a direct charge of scoundrelism against the managers, it could not be ignored, and a meeting of the New York Yacht Club was called to take action. A committee was appointed, consisting of J. Pierpont Morgan, William C. Whitney, George L. Rives, Capt. A. T. Mahan, U. S. N., and the Hon, E. J. Phelps.

Lord Dunraven crossed the ocean, bringing th him distinguished legal counsel. The New with him distinguished legal counsel. York Yacht Club engaged Joseph H. Choate, of the New York bar. Lord Dunraven returned at once to England after giving his own testimony, in effect that to the best of his judgment, to in ocular observation, the trim of the "Defender" was altered as charged by him in his letter to the "Field." Many witnesses were examined, including members of the crews of both yachts, and after careful consideration of all the evidence the committee made the following report:

"Upon a careful consideration of the whole case, the committee are unanimously of the opinion that the charge made by Lord Dunraven. and which has been the subject of this investigation, had its origin in mistake; that it is not only not sustained by evidence, but is completely disproved; and that all the circumstances indicated by him as giving rise to his suspicion are entirely and satisfactorily explained. They deem it, therefore, but just to Mr. Iselin and the gentlemen concerned with him, as well as to the officers and crew of the 'Defender,' that the committee should express emphatically their conviction that nothing whatever occurred in con-nection with the race in question that casts the least suspicion upon the integrity or propriety of their conduct. And the committee are not willing to doubt that if Lord Dunraven had remained present throughout the investigation, so as to have heard all the evidence that was introduced, he would of his own motion have withdrawn a charge that was so plainly founded upon mistake, and that has been so unfortunate in the publicity it has attained and the feeling to which it has given rise." A courteous message was sent to Lord Dun-

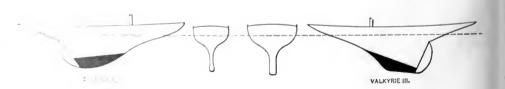

raven, informing him of this conclusion and hinting that as a member of the club some personal recognition of this conclusion would be expected. None was forthcoming, although it was understood that his lordship's resignation was on the way. It did not arrive in time for the meeting of the club, and if it had the fact would probably have made no difference, as the club in its then temper would have refused to ac-

cept it.

The club therefore proceeded to pass a resolution, with only one dissenting vote, expelling Lord Dunraven from his honorary membership, on the ground that having made charges of dishonorable conduct against fellow-members, and having failed to prove them, he had also failed to make the only amende possible for a gentle-man when he finds himself mistaken.

The yacht club acted throughout with the utmost courtesy and consideration for Lord Dunraven, and a number of the best English journals have admitted the practical justice of

its verdict.
